INTRODUCTION.

## CHAP. I.

THE Author embarks at Philadelphia—arrives at Charleston Page r C H A P. II.

Embarks again for Georgia and arrives at Savanna—proceeds Southward and arrives at Sunbury—obfervations on the town, harbour, and ifland of St. Catharine, its foil and productions—account of the eftablishment of St. John's diftrict and Midway meeting-houfe—defcription of a beautiful fifh —proceeds for the river Alatamaha, defcription of a tremendous thunder ftorm A

#### CHAP. III.

Croffes the river at Fort Barrington and arrives at St. Ille—paffes the frontier fettlements and meets an hoftile Indian—croffes the river St. Mary and arrives at the trading-houfe, account of the country thereabout, its natural productions, of the lake Ouaquaphenogaw, faid to be the fource of the river St. Mary—returns to the Alatamaha and thence to Savanna 16 C H A P. IV.

Sets off from Savanna to Augusta, one hundred fixty-five miles North-West from the fea coast-deferibles the face of the country, the river Savanna, the cataracts and village of Augusta-congrefs with the Indians at St. Augusta-the village of Wrightsborough on Little River-monuments of an ancient Indian town on Little River-Bussfaloe Lick-begins the furvey of the New Purchase-high proof of Indian fagacity-returns to

Savanna C H A P. V. The Author leaves Broughton ifland and afcends the Alatamaha-night

fcene—a tempest—defcription of the river—ruins of an ancient fortification—Indian monuments at the Oakmulge fields—Creeks, account of their fettlement in Georgia 47

## PART II.

## CHAP. 1.

Sets off from Savanna to East Florida, proceeding by land to the Alatamaha—defcends that river to Frederica on the ifland of St. Simon's defcribes the ifland and the city 55

Leaves Frederica for the lower trading-house on St. Juan's-paffes through and deferihes the found, &c. 61

## CHAP. III.

Leaves Amelia island and arrives at the Cowford, on the river St. Juan's—proceeds up the river alone in a fmall cance; fuffers by a gale of wind in crofling the river; is hofpitably entertained at a gentleman's houfe, where he refits and fails again—defcribes fort Picolata—various productions, viz. Magnolia grandiflora, Tillandfia ufneadfcites, floating fields of the Piftia firatiotes, the river and country, touches at Charlotteville—arrives at the lower trading-houfe 68

#### CHAP. IV.

Proceeds farther up the river-paffes by Mount Hope, and comes to at Mount Royal-deferibes the mount, Indian highway, &c.-beautiful landfcape of the country and profpect of the lake-enters Lake Georgedefeription defcription of the lake-forced by ftrefs of weather to put into the beautiful ifle Edelano, defcription of the ifland, ancient Indian town, mount and highway-croffes over the lake and arrives at the upper trading-houfe 95

## CHAP. V.

Provides for continuing his voyage higher up the river, engages an Indian to affift in navigating his bark, and fets fail, the Indian becomes tired and requefts to be fet on fhore-encamps at a delightful Orange grovecontinues again alone up the river : defcription of the Palma Elata : enters the Little Lake, and comes to camp at an Orange grove-fight of alligators ; a battle with them; great embarrafiments with them; kills one : vaft affemblage of fifh : defcription of the alligator and its neft, &c .- defcribes the Carica papaya-a very curious bird-in danger of being taken napping by a huge crocodile—the banks of the river admirably ornamented with feftoons and tapeftry, the work of nature-fepulchres of the ancients-a hurricane-vifits a plantation on the banks of the Long Lake; description of the lake, a large fulphureous fountain-account of the founding and present state of New Smyrna, on the Musquitoe river-returns down the river-East Lake-curious birds and a beautiful fifh-leaves Cedar Point, touches at the ifle of Palms; robbed by a wolf-arrives at Six Mile Springs -an account of that admirable fountain-defcribes the Gordonia, Zamia, Cactus opuntia, Erythrina, Cacalia, &c .- touches at Rocky Point-arrives again at the lower trading-houfe. 112

## CHAP. VI.

Proceeds on a journey to Cufcowilla-defcribes the country and waters -Annona incana, Annona pygmea, Kalmia ciliata, Empetrum album, Andromeda ferruginea, Rhododendron spurium, Pica glandaria non cristata, Lanius, Lacerta, Snakes, Chionanthus, Andromeda formofiffima, Cyrilla-encamps at the Half-way Pond-defcribes the pond and meadows, a beautiful landscape-pilgrimage of fish-describes various kinds of fishgreat foft fhelled tortoife and great land tortoife-moral reflections and meditations-leaves Half-way Pond and proceeds-fituation, quality, and furniture of the earth-arrives at Cufcowilla-reception from the Indian chief: his character-Siminoles predilection for Spanish customs and civilization-India flaves, their condition-departs for the Alachua favanna; description of the favanna-Siminoles on horseback-returns to Cuscowilla-a council and Indian feaft-defcription of the town and Cufcowilla lake—returns to the favanna—glafs fnake—makes the tour of the favanna -veftiges of the ancient Alachua-Orange groves, turkeys, deer, wolves, favanna crane-arrives at the great bason or fink-description of the fink -account of the alligators, incredible number of fifh; their fubterranean migrations-returns-old Spanish highway-Indian village-arrives again at the trading-house on St. Juan's-character and comparison of the nations of the Upper Creeks, and Lower or Siminoles 168

## CHAP. VII.

Sets out again on a journey to Talahafochte—defcription of the Siminole horfe—encamps at an enchanting grotto on the banks of a beautiful lake —rocky ridges and defert wilds—engagement between a hawk and a coach whip fnake—defcription of the fnake—account of the country, grand Pine foreft—encamps on the borders of an extensive favanna—defcription of the favanna crane—comes upon the verge of extensive favannas. Jying on a beautiful lake—the expansive fields of Capola, decorated with delightful groves—fquadrons of Siminole horfes—a troop under the conduct and care of an Indian dog—the fields of Capola a delightful region—ferruginous rocks, rich iron ore—arrives at Talahafochte on the river Little St. Juan's —defcribes the town and river—Indian cances—their voyages and traffic —Indian

ĩv

-Indian voyages to Cuba-a fifting party and naval race-an excursion to the Manatee fpring-defcription of that incomparable nymphaum-an account of the Manatee-croffes the river to explore the country-Spanifly remains-vast cane wildernesses-ancient Spanish plantations-Apalachean old fields-returns to town-White King's arrival-a council and feaftcharacter of the king-leaves the town on refearches, and encamps in the forefts-account of an extraordinary eruption of waters-joins his companions at camp-entertainment by the White King in Talahafochte--Contee, its preparation and ufe-returns to camp-great defert plains-entertainment with a party of young Siminole warriors-various natural wells and finks; conjectures concerning them-account of the Long Pond, and delightful prospects adjacent-returns for the trading-house at St. Juan'sembarrafiments occafioned by the wild horfes-encamps at Bird Ifland pond-vaft number of wild fowl tending their nefts-engagement with an alligator who furprifed the camp by night-obfervations on the great Alachua favanna and its environs-arrival at the trading-houfe 213

## CHAP. VIII.

The Author makes an excursion again up St. Juan's to Lake Georgerevisits Six Mile Springs and Illicium groves, makes collections, and recroffes the lake to the Kaftern coaft—that fhore more bold and rocky than the opposite—coafts round that fhore, touching at old deferted plantations —Perennial Cotton—Indigo—unpardonable devastation and neglect of the white fettlers, with respect to the native Orange groves—returns to the trading-house 230

## CHAP. IX.

Indian warriors, their frolic—curious conference with the Long Warrior—ludicrous Indian farce relative to a rattle-fnake—war farce 253

#### CHAP. X.

Farther account of the rattle-fnake-account and defcription of other fnakes and animals-catalogue of birds of North America; obfervations concerning their migration or annual passages from North to South, and back again 262

## CHAP. XI.

Vifits an Indian village on the river—water mclon feaft—defcription of the banqueting-houfe—makes an excurfion acrofs the river; great dangers in croffing; lands on the opposite flore—difcovers a bee tree, which yielded a great quantity of honey—returns to the flore—embarks for Frederica in Georgia; vifits the plantations down the river; enters the found and paffes through; arrives at Frederica—embarks again—touches at Sunbury—arrives at Charleftoh, South Carolina—meditates a journey to the Cherokee country and Creek nation, in Weft Florida 301

## PART III.

#### CHAP, I.

The Author fets out for the Cherokee territories—paffes through a fine cultivated country—croffes Savanna river and enters the flate of Georgia —Direa paluftris—cowpens—civil entertainment at a plantation—parfues the road to Auguita, and recroffes the river at Silver Bluff—account of Mr. Golphin's villa and trading flores, Silver Bluff, fort Moore, Augufta, Savanna river, mountains of large foffil oy fter-fhells 306

## 7

#### CHAP. II.

Proceeds for fort James, Dartmouth—curious fpecies of Azalea—croffes Broad River—eftablifhment of Dartmouth—Indian mount, &c. croffes Savanna river—violent guft of rain—curious fpecies of Æfculus pavia—town of Sinica—fort Prince George, Keowe—defcribes the country 318

## CHAP. III.

Ocone vale—monuments of the ancient town—croffes the mountains their fituation, views, and productions—refts on the top of Mount Magnolia—defcription of a new and beautiful fpecies of Magnolia—cafcades of Falling Creek—thunder florm—head of Tanafee—vale of Cowe—Indian graves—towns of Echoe, Nucaffee, and Whatoga—nobly entertained by the Prince of Whatoga—arrives at the town of Cowe—makes an excursion with a young trader on the hills of Cowe—incomparable prospects--horfeftamp--difcovers a company of Cherokee nymphs--a frolic with them--rcturns to town 33<sup>‡</sup>

## CHAP. IV.

Sets off from Whatoga to the Overhill towns---Jore village---Roaring Creek-the Author and his guide part--furprifed by an Indian--falute and part friendly--mountainous vegetable productions--arrives on the top of Jore mountain--fublime profpects--Atta-kul-kulla, grand Cherokee chief-gracious reception--returns to Cowe-great council-houfe--curious Indian dance--returns and flops at Sinica--arrives again at fort James, Dartmouth---lift of Cherokee towns and villages 357

### CHAP. V.

Sets off from Dartmouth to the Upper Creeks and Chactaws country-Flat Rock—a curious plant—Rocky Comfort—Ocone old Town\_migration of the Ocones—croffes the river—fords the Oakmulge at the Oakmulge fields—Stoney Creek—Great and Little Tabofachte—new fpecies of Hydrangia—croffes Flint River—defcribes the country—perfecuted by extraordinary heats and incredible numbers of biting flies—Hippobofca and Afilus—extraordinary thunder guft—croffes Chata Uche river—defcribes the town—very large and populous-proceeds and arrives at the Apalachucla town—vifits the old town—extraordinary remains and monuments of the ancients—general face of the country and vegetable productions—new fpecies of Æfculus 373

#### CHAP. VI.

Proceeds, and after three days journey arrives at Tallafe, on the Tallapoofe river—Coloome, a handfome town—great plains—further account of the country—Dog woods—croffes the river Schambe—comes to Taenfa on the Eaft banks of the Mobile, thirty miles above the city—French inhabitants—paffes down the river, arrives at the city of Mobile—flort account of the city and fort Condé—returns to Taenfa, and proceeds up the river as far as the entrance of the Chicafaw branch—floating forefls of the Nymphæa Nelumbo—vifits the adjacent lands—returns to Mobile—goes to the river Perdido—continues on to Penfacola—cordially received by Governor Cheftet—fome account of the town—difcovers a new and beautiful fpecies of Sarracenia—returns to Mobile 894

### CHAP. VII.

Leaves Mobile for Manchac on the Miffiffippi-proceeds by water to Pearl filand-kindly entertained by Mr. Rumfey-deforibes the ifland-large evinion Plum-a delicate fpecies of Mimofa-paffes lake Pontchartrain -touches -touches at the river Taenfapaoa-paffes over Lake Maurepas-proceeds tip to Iberville-croffes by land to Manchac-goes up the Midiffipp}fettlements of New Richmond-White Plains-curious mufcle fhells in the river-croffes over to Point Coupè-Spanifh village and fortrefs-high cliffs oppofite Point Coupè-returns to the Amite, thence down through the lanks and founds back again to Mobile 416

### CHAP. VIII.

Leaves Mobile on his return-proceeds with a company of traders for the Creek nation-his horfe tires-is in great diffrefs-meets a company of traders, of whom he purchafes a fresh horse-Illicium groves-meets a company of emigrants from Georgia-great embarraffment at a large creek fwollen with late heavy rains-arrives at the banks of the Alabama -croffes it and arrives at Mucclaffe-Indian marriage-ferious reflections-perilous fituation of the trader of Mucclasse-fets off for Ottaffedefcribes the country contiguous to the Tallapoofe river-plantations and towns-Coolome-Tuckabatche-croffes the river and arrives at Ottafferotunda and fquare-blank drink-fpiral fire--Sabbath or holy day to the Great Spirit---fets off with a company of traders for Georgia---Chehaw and Uffeta, Creek towns on the Apalachucla river, almost join each other, yet the inhabitants fpeak two languages radically different --- arrives at the Oakmulge --- croffes the river in a portable leather boat --- croffes the river Oconne---head branches of Great Ogeche---arrives at Augusta---takes leave of Augusta and his friends there, and proceeds for Savanna---lift of Mufcogulge towns and villages --- conjectures concerning the rife of the Mufcogulge confederacy 438

#### CHAP. IX.

### CHAP. X.

Proceeds for Charleston --- Calls at a gentleman's plantation --- Adoe ----Tannier --- wild pigeons --- After fruticofus --- leaves Charletton, proceeds on his return home to Pennfylvania --- croffes Cooper river, nine miles above the city---Long Bay---reefs of rocks---meets a gang of Negroes---paffes the boundary houfe---large favanna---Dionæa mufcipula---old towns---Bruniwick .-- the Clarendon or Cape Fear river --- North Weft --- Livingfton's creek --- Wackamaw lake --- Carver's creek --- Afhwood --- various vegetable productions---cultivated vegetables---defcribes the face of the country on the banks of the North Weft and the adjacent lands --- ftrata of the earth or foil---rocks---petrifactions---ancient fubmarine productions, &c.---leaves Ashwood, continues up the river---vast trunks of trees, with their roots, and flumps of limbs, with the bark on, turned into very hard ftone ---Rock-fifh creek --- Crofs Creeks --- the rife, progrefs, and prefent flate of Cambelton --- curious fpecies of fcandent Fern--- Deep River--- croffes Haw River---Meherren river in Virginia-+-Cucurbita lagenaria---cutious fpecies of Prinos---Alexandria---George town---fudden fall of fnow---extremecold --- croffes the river Sufquehanna upon the ice -- river Schuylkill --- arrives at his father's house, within three miles of Philadelphia 467

## PART IV.

## CHAP. I

Perfons, character, and qualifications of the Aborigines---most perfect human figure---Mufcogulge women---women of the Cherokees---arrogance of the Mufcogulges, yet magnanimous and merciful to a vanquifhed enemy

CHAP.

481

122

### CHAP. II.

Government and civil fociety---conflitution fimply natural---the mice or king prefides in the fenate---elective---yet myfterious---the next man in dignity and power is the great war chief---entirely independent of the mico---his voice in council of the greateft weight concerning military affairs---the high prieft a perfon of confequence, and maintains great influence in their conflitution and councils of flate---thefe Indians not idolaters---they adore the Great Spirit, the giver and taker away of the breath of life, with the moft profound homage and purity---anecdote

## CHAP. III.

Drefs, feafts, and divertifements---youth of both fexes are fond of decorations with refpect to drefs---their ears lacerated---diadem plumes, &c. ---paint their fkin---drefs of the females different from that of the men--great horned owl fkin fluffed and born about by the priefts---infignia of wifdom and divination---fond of mufic, dancing, and rout---different claffes of fongs---variety of fleps in their dances---fenfible and powerful effects--ball play---feftival of the Bufk

#### CHAP. IV.

Concerning property, agriculture, arts, and manufactures---private property---produce of their agricultural labours---common plantation---king's crib---public treafury---women the most ingenious and vigilant in mechanic arts and manufactures 509

### CHAP. V.

Marriages and funeral rites---polygamy---take wives whilt they are yet young children---adultery---Mufcogulges bury their dead in a fitting pofture---ftrange cuftoms of the Chactaws relative to duties to the deceafed---bone houfe----firges---feaft to the dead---methods which the nurfes purfue to flatten the infant's fkull and retain its form 512

## CHAP. VI.

Language and monuments---Mufcogulge language fpoken throughout the confederacy---agreeable to the ear---Cherokee language loud---pyramidal artificial hills or mounts, terraces, obelisks---high ways and artificial lakes---chunk yards---flave pofts 517

## INTRODUCTION.

\*111

THE attention of a traveller should be particularly turned in the first place, to the various works of Nature, to mark the diffinctions of the climates he may explore, and to offer fuch uleful observations on the different productions as may occur. Men and manners undoubtedly hold the first rank-what ever may contribute to our existence is also of equal importance, whether it be found in the animal or vegetable kingdom; neither are the various articles, which tend to promote the happinels and convenience of mankind, to be difregarded. How far the writer of the following fheets has fucceeded in furnishing information on these subjects, the reader will be capable of determining. From the advantages the journalist enjoyed under his father JOHN BAR-TRAM, botanist to the king of Great Britain, and fellow of the Royal Society, it is hoped that his labours will prefent new as well as ufeful information to the botanift and zoologift.

This world, as a glorious apartment of the boundlefs palace of the fovereign Creator, is furnished with an infinite variety of animated fcenes, inexpressibly beautiful and pleasing, equally free to the inspection and enjoyment of all his creatures.

Perhaps there is not any part of creation, within the reach of our obfervations, which exhibits a more glorious difplay of the Almighty hand, than the vegetable world; fuch a variety of pleafing fcenes, ever changing throughout the feafons, arifing from various caufes, and affigned each to the purpofe and ufe determined.

It is difficult to pronounce which division of the earth, between the polar circles, produces the greatest

variety

variety. The tropical division certainly affords those which principally contribute to the more luxurious scenes of splendour, as Myrtus communis, Myrt. caryophyllata, Myrt. pimenta, Caryophillus aromaticus, Laurus cinnam. Laurus camphor. Laurus Perfica, Nux mosch. Illicium, Camelia, Punica, Cactus melo-cactus, Cactus grandiflora, Gloriosa superba, Theobroma, Adansonia digitata, Nyctanthes, Pfidium, Musa paradifica, Musa fapientum, Garcinia mangostana, Cocos nucifera, Citrus, Citrus aurantium, Cucurbita citrullus, Hyacinthus, Amaryllis, Narcissus, Poinciana pulcherrima, Crinum, Cactus cochinellifer.

But the temperate zone (including by far the greater portion of the earth, and a climate the most favourable to the increase and support of animal life, as well as for the exercise and activity of the human faculties) exhibits scenes of infinitely greater variety, magnificence, and consequence, with respect to human economy, in regard to the various uses or vegetables.

For inftance; Triticum Cereale, which affords us bread, and is termed by way of eminence, the ftaff of life, the moft pleatant and nourifhing food to all terreftrial animals. Vitis vinifera, whofe exhilarating juice is faid to cheer the hearts of gods and men. Oryza, Zea, Pyrus, Pyrus malus, Prunus, Pr. cerafus, Ficus, Nectarin, Apricot, Cydonia. Next follow the illuftrious families of foreft-' trees, as the Magnolia grandiflora and Quercus fempervirens, which form the venerated groves and folemn fhades, on the Miffifippi, Alatamaha and Florida; the magnificent Cupreffus difticha of Carolina and Florida; the beautiful Water Oak\*, whofe vaft hemifpheric head prefents the likenefs of a diftant grove in the fields and favannas of Carolina; the

\* Quercus Hen i pherica.

gigantic

gigantic Black Oak +, Platanus occidentalis, Liquidambar styraciflua, Liriodendron tulipifera, Fagus castanea, Fagus sylvatica, Juglans nigra, Juglans cinerea, Jug. pecan, Ulmus, Acer faccharinum, of Virginia and Pennfylvania; Pinus phœnix, Pinus tœda, Magnolia acuminata, Nyffa aquatica, Populus heterophylla, and the floriferous Gordonia lafianthus, of Carolina and Florida; the exalted Pinus ftrobus, Pin. balfamica, Pin. abies, Pin. Canadenfis, Pin. larix, Fraxinus excelfior, Robinia pfeudacacia, Guilandina dioica, Æfculus Virginica, Magnolia acuminata, of Virginia, Maryland, Pennfylvania, New Jerfey, New York, New England, Ohio, and the regions of Erie and the Illinois; and the aromatic and floriferous shrubs, as Azalea coccinea, Azalea rofea, Rofa, Rhododendron, Kalmia, Syringa, Gardenia, Calycauthus, Daphne, Franklinia, Styrax, and others equally celebrated.

In every order of nature we perceive a variety of qualities distributed amongst individuals, defigned for different purpofes and uses; yet it appears evident, that the great Author has impartially diftributed his favours to his creatures, fo that the attributes of each one feem to be of fufficient importance to' manifest the divine and inimitable workmanship. The pompous Palms of Florida, and glorious Magnolia, strikes us with the fense of dignity and magnificence; the expansive umbrageous Live Oak t with awful veneration; the Carica papaya, feems fupercilious with all the harmony of beauty and gracefulness; the Lilium superbum represents pride and vanity; Kalmia latifolia and Azalea coccinea, exhibit a perfect flow of mirth and gaiety; the Illicium Floridanum, Crinum Floridanum, Convallaria majalis of the Cherokees, and Calycanthus floridus, charm with their beauty and fragrance. Yet they are not to be compared for ulefulnefs with the nutri-

+ Quercus tinctoria.

† Quercus sempervirens.

b 2

tious

tious Triticum, Zea, Oryza, Solanum tuberofum, Mufa, Convolvulus Batata, Rapa, Orchis, Vitis vinifera, Pyrus, Olea; for clothing with Linum Cannabis, Goffypium, Morus; for medicinal virtues with Hyflopus, Thymus, Anthemis nobilis, Papaver fomniferum, Quinquina, Rheum rhabarbarum, Pifum, &c. Though none of thefe moft ufeful tribes are confpicuous for ftatelinefs, figure, or fplendour, yet their valuable qualities and virtues excite love, gratitude, and adoration to the great Creator, who was pleafed to endow them with fuch eminent qualities, and reveal them to us for our fuftenance, amufement, and delight.

But there remain of the vegetable world feveral tribes that are diffinguifhed by very remarkable properties, which excite our admiration, fome for the elegance, fingularity, and fplendour of their veftment, as the Tulipa, Fritillaria, Colchicum, Primula, Lilium fuperbum, Kalmia, &c.: others aftonifh us by their figure and difpofal of their vefture, as if defigned only to embellifh and pleafe the obferver, as the Nepenthes diftillatoria, Ophrys infectoria, Cypripedium calceolus, Hydrangia quercifolia, Bartramia bracteata, Viburnum Canadenfe, Bartfia, &c.

Obferve thefe green meadows how they are decorated; they feem enamelled with the beds of flowers. The blufning Chironia and Rhexia, the fpiral Ophrys with immaculate white flowers, the Limodorum, Arethufa pulcherrima, Sarracenia purpurea, Sarracenia galeata, Sarracenia lacunofa, Sarracenia flava. Shall we analyze thefe beautiful plants, fince they feem cheerfully to invite us? How greatly the flowers of the yellow Sarracenia reprefent a filken canopy? the yellow pendant petals are the curtains, and the hollow leaves are not unlike the cornucopia or Amalthea's horn; what a quantity of water a leaf is capable of containing, about a pint! tafte of

it----

xii

it-how cool and animating-limpid as the morning dew : nature feems to have furnished them with this cordated appendage or lid, which turns over, to prevent a too fudden and copious fupply of water from heavy fhowers of rain, which would bend down the leaves, never to rife again ; becaufe their ftraight parallel nerves, which extend and fupport them, are fo rigid and fragile, the leaf would inevitably break when bent down to a right angle; therefore I fuppofe the waters which contribute to their fupply, are the rebounding drops or horizontal ftreams wafted by the winds, which adventitioufly find their way into them, when a blaft of wind fhifts the lid: fee these short stiff hairs, they all point downwards, which direct the condenfed vapours down into the funiculum; these ftiff hairs also prevent the varieties of infects, which are caught from returning, being invited down to fip the mellifluous exudation, from the interior furface of the tube, where they inevitably perifh; what quantities there are of them! These latent waters undoubtedly contribute to the support and refreshment of the plant : perhaps defigned as a refervoir in cafe of long continued droughts, or other cafualties, fince thefe plants naturally dwell in low favannas liable to overflows, from rain water : for although I am not of the opinion that vegetables receive their nourifhment only through the afcending part of the plant, as the ftem, branches, leaves, &c.; and that their defcending parts, as the root and fibres, only ferve to hold and retain them in their places; yet I believe they imbibe rain and dews through their leaves, stems, and branches, by extremely minute pores, which open on both furfaces of the leaves and on the branches, which may communicate to little auxilary ducts or veffels; or, perhaps the cool dews and fhowers, by conftricting thefe pores, and thereby preventing a too free perfpiration, may

may recover and again invigorate the languid nerves of those which seem to suffer for want of water, in great heats and droughts; but whether the infects caught in their leaves, and which diffolve and mix with the fluid, ferve for aliment or support to these kind of plants, is doubtful. All the Sarracenias are infect catchers, and so is the Droffea rotundifolia.

But admirable are the properties of the extraordinary Dionea muscipula! A great extent on each fide of that ferpentine rivulet is occupied by those fportive vegetables-let us advance to the fpot in which nature has feated them. Aftonishing production! fee the incarnate lobes expanding, how gay and fportive they appear! ready on the fpring to intrap incautious deluded infects ! what artifice ! there behold one of the leaves just closed upon a ftruggling fly; another has gotten a worm; its hold is fure, its prey can never escape-carnivorous vegetable! Can we after viewing this object, hefitate a moment to confefs, that vegetable beings are endued with fome fenfible faculties or attributes, fimilar to those that dignify animal nature; they are organical, living, and felf-moving bodies, for we fee here, in this plant, motion and volition.

What power or faculty is it, that directs the cirri of the Cucurbita, Momordica, Vitis, and other climbers, towards the twigs of fhrubs, trees, and other friendly fupport? we fee them invariably leaning, extending, and like the fingers of the human hand, reaching to catch hold of what is neareft, juft as if they had eyes to fee with; and when their hold is fixed, to coil the tendril in a fpiral form, by which artifice it becomes more elaftic and effectual, than if it had remained in a direct line, for every revolution of the coil adds a portion of ftrength; and thus collected, they are enabled to dilate and contract as occasion or neceffity requires, and

xiv

and thus by yielding to, and humouring the motion of the limbs and twigs, or other fupport on which they depend, are not fo liable to be torn off by fudden blafts of wind or other affaults: is it fenfe or inftinct that influences their actions? it must be fome impulse; or does the hand of the Almighty act and perform this work in our fight?

The vital principle or efficient caufe of motion and action, in the animal and vegetable \* fystem, perhaps, may be more fimilar than we generally apprehend. Where is the effential difference between the feed of peas, peaches, and other tribes of plants and trees, and the eggs of oviparous animals, as of birds, fnakes, or butterflies, fpawn of fish, &c.? Let us begin at the fource of terreftrial existence. Are not the feeds of vegetables, and the eggs of oviparous animals fecundated, or influenced with the vivific principle of life, through the approximation and intimacy of the fexes? and immediately after the eggs and feeds are hatched, does not the young larva and infant plant, by heat and moifture, rife into existence, increase, and in due time arrive to a flate of perfect maturity? The phyfiologifts agree in opinion, that the work of generation in viviparous animals, is exactly fimilar, only more fecret and enveloped. The mode of operation that nature purfues in the production of vegetables, and oviparous animals, is infinitely more uniform and manifest, than that which is or can be discovered to take place in viviparous animals.

The most apparent difference between animals and vegetables is, that animals have the powers of found, and are locomotive, whereas vegetables are not able to fhift themfelves from the places where nature has planted them : yet vegetables have the power of moving and exercifing their members, and

\* Yid. Sponfalia plantarum, Amœn. Acad l. n. 12. Linn.

have

have the means of transplanting or colonifing their tribes almost over the furface of the whole earth: fome feeds, for inftance, grapes, nuts, fmilax, peas, and others, whole pulp or kernel is food for animals, will remain feveral days without being injured in ftomachs of pigeons and other birds of paffage; by this means fuch forts are distributed from place to place, even acrofs feas; indeed fome feeds require this preparation by the digeflive heat of the ftomach of animals, to diffolve and detach the oily, vifcid pulp, or to foften the hard shells. Small feeds are fometimes furnished with rays of hair or down; and others with thin light membranes attached to them, which ferve the purpofe of wings, on which they mount upward, leaving the earth, float in the air, and are carried away by the fwift winds to very remote regions before they fettle on the earth; fome are furnished with hooks, which catch hold of the wool and hair of animals paffing by them, and are by that means fpread abroad; other feeds ripen in pericarpes, which open with elastic force, and shoot their feed to a very great diftance round about; fome other feeds, as of the Moffes and Fungi, are fo very minute as to be invisible, light as atoms, and thefe mixing with the air, are wafted all over the world.

The animal creation alfo excites our admiration, and equally manifefts the almighty power, wifdom, and beneficence of the Supreme Creator and Sovereign Lord of the univerfe; fome in their vaft fize and ftrength, as the mammoth, the elephant, the whale, the lion, and alligator; others in agility; others in their beauty and elegance of colour, plumage, and rapidity of flight, having the faculty of moving and living in the air; others for their immediate and indifpenfable ufe and convenience to man, in furnifhing means for our clothing and fuftenance, and

and administering to our help in the toils and labours of life: how wonderful is the mechanism of these finely formed felf-moving beings, how complicated their fystem, yet what unerring uniformity prevails through every tribe and particular fpecies! the effect we fee and contemplate, the caufe is invifible, incomprehenfible; how can it be otherwife? when we cannot fee the end or origin of a nerve or vein, while the divisibility of matter or fluid, is infinite. We admire the mechanism of a watch, and the fabric of a piece of brocade, as being the production of art: these merit our admiration, and must excite our efteem for the ingenious artift or modifier ; but nature is the work of God omnipotent; and an elephant, nay even this world, is comparatively but a very minute part of his works. If then the visible, the mechanical part of the animal creation, the merematerial part, is fo admirably beautiful, harmonious, and incomprehensible, what must be the intellectual fystem? that inexpressibly more effential principle, which fecretly operates within ? that which animates the inimitable machines, which gives them motion, impowers them to act, fpeak, and perform, this must be divine and immortal?

I am fenfible that the general opinion of philofophers, has diffinguifhed the moral fyftem of the brute creature from that of mankind, by an epithet which implies a mere mechanical impulfe, which leads and impels them to neceffary actions, without any premeditated defign or contrivance; this we term inflinct, which faculty we fuppofe to be inferior to reason in man.

The parental and filial affections feem to be as ardent, their fenfibility and attachment as active and faithful, as those observed in human nature.

When travelling on the eaft coaft of the ifthmus of Florida, afcending the fouth Mulquito river, in a canoe.

a canoe, we observed numbers of deer and bears. near the banks, and on the illands of the river: the bears were feeding on the fruit of the dwarf creeping Chamærops; (this fruit is of the form and fize of dates, and is delicious and nourifhing food :) we faw eleven bears in the courfe of the day, they feemed no way furprifed or affrighted at the fight of us. In the evening, my hunter, who was an excellent markfman, faid that he would fhoot one of them, for the fake of the fkin and oil, for we had plenty and variety of provisions in our bark. We accordingly, on fight of two of them, planned our approaches as artfully as poffible, by croffing over to the opposite shore, in order to get under cover of a finall ifland; this we cautioufly coafted round, to a point, which we apprehended would take us within shot of the bears; but here finding ourfelves at too great a diftance from them, and difcovering that we must openly show ourfelves, we had no other alternative to effect our purpofe, but making oblique approaches. We gained gradually on our prey by this artifice, without their noticing us : finding ourfelves near enough, the hunter fired, and laid the largeft dead on the fpot where fhe ftood ; when prefently the other, not feeming the leaft moved at the report of our piece, approached the dead body, fmelled, and pawed it, and appearing in agony, fell to weeping and looking upwards, then towards us, and cried out like a child. Whilft our boat approached very near, the hunter was loading his rifle in order to fhoot the furvivor, which was a young cub, and the flain fuppofed to be the dam. The continual cries of this afflicted child, bereft of its parent, affected me very fenfibly; I was moved with compaffion, and charging myfelf as if acceffary to what now appeared to be a cruel murder, endeavoured to prevail on the hunter to fave

XVIII

fave its life, but to no effect! for by habit he had become infenfible to compaffion towards the brute creation: being now within a few yards of the harmlefs devoted victim, he fired, and laid it dead upon the body of the dam.

If we beltow but very little attention to the economy of the animal creation, we shall find manifest examples of premeditation, perfeverance, refolution, and confummate artifice, in order to effect their purpofes. The next morning, after the flaughter of the bears, whilst my companions were striking our tent and preparing to re-embark, I refolved to make a little botanical excursion alone : croffing over a narrow ifthmus of fand hills which feparated the river from the ocean, I paffed over a pretty high hill, its fummit crefted with a few palm trees. furrounded with an Orange grove : this hill, whofe bale was walhed on one fide by the floods of the Mulquito river, and on the other fide by the billows of the ocean, was about one hundred yards diameter, and feemed to be an entire heap of fea shells. I continued along the beach a quarter of a mile, and came up to a forest of the Agave vivipara (though composed of herbaceous plants, I term it a forest. becaufe their fcapes or flower-stems arole erect near 30 feet high): their tops regularly branching in the form of a pyramidal tree, and these plants growing near to each other, occupied a space of ground of feveral acres: when their feeds are ripe they vegetate, and grow on the branches, until the fcape dries, when the young plants fall to the ground, take root, and fix themfelves in the fand : the plant grows to a prodigious fize before the fcape fhoots up from its centre. Having contemplated this admirable grove, I proceeded towards the fhrubberies on the banks of the river, and though it was now late in December, the aromatic groves appeared in full

full bloom. The broad-leaved fweet Myrtus, Erythrina corallodendrum, Cactus cochinellifer, Cacalia fuffruticofa, and particularly, Rhizophora conjugata, which flood clofe to and in the falt water of the river, were in full bloom, with beautiful white fweet fcented flowers, which attracted to them two or three species of very beautiful butterflies, one of which was black, the upper pair of its wings very long and narrow, marked with transverse stripes of pale yellow, with fome fpots of a crimfon colour near the body. Another species remarkable for fplendour, was of a larger fize; the wings were undulated and obtufely crenated round their ends, the nether pair terminating near the body, with a long narrow forked tail; the ground light yellow, ftriped oblique-transversely, with ftripes of pale celeftial blue, the ends of them adorned with little eyes encircled with the finest blue and crimfon, which reprefented a very brilliant rofary. But those which were the most numerous were as white as fnow, their wings large, their ends lightly crenated and ciliated, forming a fringed border, faintly marked with little black crefcents, their points downward, with a cluster of little brilliant orbs of blue and crimfon, on the nether wings near the body; the numbers were incredible, and there feemed to be fcarcely a flower for each fly, multitudinous as they were, befides clouds of them hovering over the mellifluous groves. Befides thefe papiles, a variety of other infects come in for a share, particularly feveral fpecies of bees.

As I was gathering fpecimens of flowers from the fhrubs, I was greatly furprifed at the fudden appearance of a remarkably large fpider on a leaf, of the genus Araneus faliens: at fight of me he boldly faced about, and raifed himfelf up, as if ready to fpring upon me; his body was about the fize of a pigeon's

pigeon's egg, of a buff colour, which, with his legs, were covered with fhort filky hair; on the top of the abdomen was a round red fpot or ocelle encircled with black. After I had recovered from . the furprife, obferving that the wary hunter had retired under cover, I drew near again, and prefently difcovered that I had furprifed him on predatory attempts against the infect tribes. I was therefore determined to watch his proceedings. I foon noticed that the object of his wifnes was a large fat bomble bee (apis bombylicus), that was visiting the flowers, and piercing their nectariferous tubes : this cunning intrepid hunter conducted his fubtil approaches with the circumfpection and perfeverance of a Siminole when hunting a deer, advancing with flow fteps obliquely, or under cover of denfe foliage, and behind the limbs, and when the bee was engaged in probing a flower, he would leap nearer, and then instantly retire out of fight, under a leaf or behind a branch, at the fame time keeping a fharp eye upon When he had now gotten within two feet of me. his prey, and the bee was intent on fipping the delicious nectar from a flower, with his back next the fpider, he inftantly fprang upon him, and grafped him over the back and shoulder, when for some moments they both difappeared. I expected the bee had carried off his enemy, but to my furprife, they both together rebounded back again, fufpended at the extremity of a ftrong elastic thread or web, which the fpider had artfully let fall, or fixed on the twig, the inftant he leaped from it : the rapidity of the bee's wings, endeavouring to extricate himfelf, made them both together appear as a moving vapour, until the bee became fatigued by whirling round, first one way and then back again: at length, in about a quarter of an hour, the bee quite exhausted by his struggles, and the repeated wounds of

xxi

of the butcher, became motionlefs, and quickly expired in the arms of the devouring fpider, who, afcending the rope with his game, retired to feaft on it under cover of the leaves; and perhaps before night, became himfelf the delicious evening repart of a bird or lizard.

Birds are in general focial and benevolent creatures; intelligent, ingenious, volatile, active beings; and this order of animal creation confifts of various nations, bands, or tribes, as may be obferved from their different structure, manners, and languages, or voice; each nation, though fubdivided into many different tribes, retaining its general form or structure, a fimilarity of customs, and a fort of dialect or language, particular to that nation or genus from which those tribes feem to have defcended or feparated. What I mean by a language in birds, is the common notes or fpeech, that they ufe when employed in feeding themfelves and their young, calling on one another, as well as their menaces against their enemy; for their fongs feem to be mufical compositions, performed only by the males, about the time of incubation, in part to divert and amufe the female, entertaining her with melody, &c. This harmony, with the tender folicitude of the male, alleviates the toils, cares, and diftreffes of the female, confoles her in folitary retirement whilft fitting, and animates her with affection and attachment to himfelf in preference to any The volatility of their fpecies, and operaöther. tion of their paffions and affections, are particularly confpicuous in the different tribes of the thrush, famous for fong. On a fweet May morning we tee the red thrushes (turdus rufus) perched on an elevated fprig of the fnowy Hawthorn, fwcet flowering Crab, or other hedge fhrub, exerting their accomplifhments in fong, ftriving by varying and elevating

vating their voices to excel each other; we obferve a very agreeable variation, not only in tone but in modulation; the voice of one is fhrill, of another lively and elevated, of others fonorous and quivering. The mock-bird (turdus polyglottos) who excels, diftinguifhes himfelf in a variety of action as well as air; from a turret he bounds aloft with the celerity of an arrow, as it were to recover or recal his very foul, expired in the laft elevated ftrain. The high forefts are filled with the fymphony of the fong or wood thrush (turdus minor)

Both fexes of fome tribes of birds fing equally finely; and it is remarkable, that these reciprocally affift in their domestic cares, as building their nefts and fitting on their eggs, feeding and defending their young brood, &c. The oriolus (icterus, Cat.) is an inftance of this cafe; and the female of the icterus minor is a bird of more fplendid and gay drefs than the male bird. Some tribes of birds will relieve and rear up the young and helplefs, of their own and other tribes, when abandoned. Animal fubftance feems to be the first food of all birds, even the granivorous tribes.

Having paffed through fome remarks, which appeared of fufficient confequence to be offered to the public, and which were most fuitable to have a place in the introduction, I shall now offer fuch observations as must necessarily occur, from a careful attention to, and investigation of, the manners of the Indian nations; being induced, while travelling among them, to affociate with them, that I might judge for myself, whether they were deferving of the fevere censure which prevailed against them among the white people, that they were incapable of civilization.

In the confideration of this important fubject it will be neceffary to inquire, whether they were inclined

clined to adopt the European modes of civil fociety? Whether fuch a reformation could be obtained, without using coercive or violent means? And lastly, whether fuch a revolution would be productive of real benefit to them, and confequently beneficial to the public? I was fatisfied in difcovering that they were defirous of becoming united with us, in civil and religious fociety.

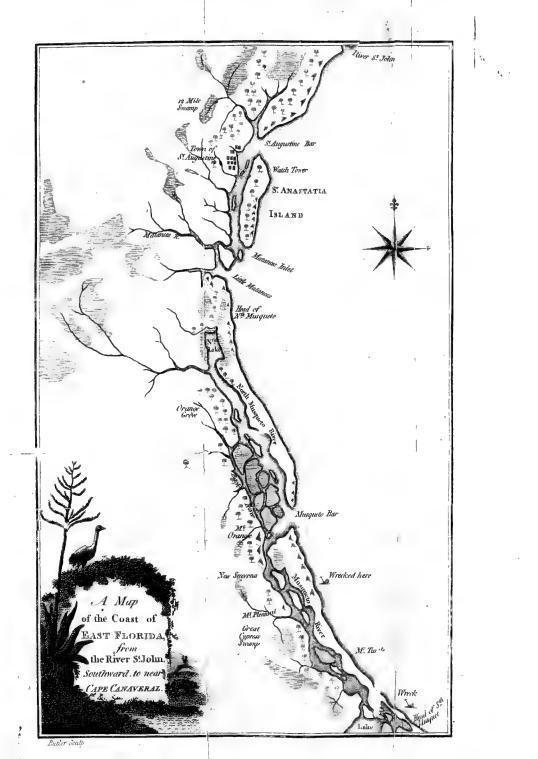

It may, therefore, not be foreign to the fubject, to point out the propriety of fending men of ability and virtue, under the authority of government, as friendly vifitors, into their towns: let thefe men be inftructed to learn perfectly their languages, and by a liberal and friendly intimacy become acquainted with their cuftoms and ufages, religious and civil; their fyftem of legiflation and police, as well as their most ancient and prefent traditions and hiftory. Thefe men thus enlightened and inftructed would be qualified to judge equitably, and when returned to us, to make true and just reports, which might affilt the legiflature of the United States to form, and offer to them, a judicious plan for their civilization and union with us.

But I prefume not to dictate in thefe high concerns of government, and I am fully convinced that fuch important matters are far above my ability; the duty and refpect we owe to religion and rectitude, the most acceptable incenfe we offer to the Almighty, as an atonement for our negligence in the care of the prefent and future well being of our Indian brethren, induce me to mention this matter, though perhaps of greater concernment than we generally are aware.

## NORTH AMERICA.

## CHAP. I.

## The author fets fail from Philadelphia, and arrives at Charleston, from whence he begins his travels.

AT the request of Dr. Fothergill, of London, to fearch the Floridas, and the western parts of Carolina and Georgia, for the difcovery of rare and uleful productions of nature, chiefly in the vegetable kingdom; in April, 1773, I embarked for Charlefton, South Carolina, on board the brigantine Charlefton packet, captain Wright, the brig -----, captain Mafon, being in company with us, and bound to the fame port. We had a pleafant run down the Delaware, 150 miles to cape Henlopen, the two veffels entering the Atlantic together. For the first twenty-four hours we had a profperous gale, and were cheerful and happy in the profpect of a quick and pleafant voyage; but, alas! how vain and uncertain are human expectations! how quickly is the flattering fcene changed! The powerful winds, now rushing forth from their R

their fecret abodes, fuddenly fpread terror and devaftation; and the wide ocean, which, a few moments paft, was gentle and placid, is now thrown into diforder, and heaped into mountains, whofe white curling crefts feem to fweep the fkies!

This furious gale continued near two days and nights, and not a little damaged our fails, cabin furniture, and state-rooms, befides retarding our paffage. The ftorm having abated, a lively gale from N. W. continued four or five days, when fhifting to N. and laftly to N. E. on the tenth of our departure from cape Henlopen, early in the morning, we defcried a fail aftern, and in a fhort time difcovered it to be capt. Mafon, who foon came up with us. We hailed each other, being joyful to meet again after fo many dangers. He fuffered greatly by the gale, but providentially made a good harbour within cape Hatteras. As he ran by us, he threw on board ten or a dozen bafs, a large and delicious fifh, having caught a great number of them whilft he was detained in harbour. He got into Charleston that evening, and we the next morning, about eleven o'clock.

There are few objects out at fea to attract the notice of the traveller, but what are fublime, awful, and majeftic: the feas themfelves, in a tempeft, exhibit a tremendous fcene, where the winds affert their power, and, in furious conflict, feem to fet the ocean on fire. On the other hand, nothing can be more fublime than the view of the encircling horizon, after the turbulent winds have taken their flight, and the lately agitated bofom of the deep has again become calm and pacific; the gentle moon rifing in dignity from the eaft, attended by thoufands of glittering orbs; the luminous appearance

of

of the feas at night, when all the waters feem tranfmuted into liquid filver; the prodigious bands of porpoifes foreboding tempest, that appear to cover the ocean; the mighty whale, fovereign of the watery realms, who cleaves the feas in his courfe; the fudden appearance of land from the fea, the ftrand ftretching each way, beyond the utmost reach of fight; the alternate appearance and recess of the coaft, whilft the far diftant blue hills flowly retreat and difappear; or, as we approach the coaft, the capes and promontories first strike our fight, emerging from the watery expanse, and, like mighty giants, elevating their crefts towards the fkies; the water fuddenly alive with its fcaly inhabitants; fquadrons of fea-fowl fweeping through the air, impregnated with the breath of fragrant aromatic trees and flowers; the amplitude and magnificence of these fcenes are great indeed, and may prefent to the imagination, an idea of the first appearance of the earth to man at the creation.

On my arrival at Charleston, I waited on doctor Chalmer, a gentleman of eminence in his profession and public employments, to whom I was recommended by my worthy patron, and to whom I was to apply for counfel and affistance, for carrying into effect my intended travels. The doctor received me with perfect politeness, and, on every occasion, treated me with friendship; and by means of the countenance which he gave me, and the marks of esteem with which he honoured me, I became acquainted with many of the worthy families, not only of Carolina and Georgia, but also in the distant countries of Florida.

#### TRAVELS IN

## CHAP. II.

ARRIVING in Carolina very early in the fpring, vegetation was not fufficiently advanced to invite me into the western parts of this state; from which circumstance, I concluded to make an excursion into Georgia; accordingly, I embarked on board a coafting veffel, and in twenty four hours arrived in Savanna, the capital, where, acquainting the governor, Sir J. Wright, with my bufinefs, his excellency received me with great politenefs, fhewed me every mark of efteem and regard, and furnifhed me with letters to the principal inhabitants of the ftate, which were of great fervice to me. Another circumftance very opportunely occurred on my arrival: the affembly was then fitting in Savanna, and feveral members lodging in the fame house where I took up my quarters, I became acquainted with feveral worthy characters, who invited me to call at their feats occafionally, as I paffed through the country; particularly the hon. B. Andrews, efg. a diftinguished, patriotic, and liberal character. This gentleman's feat, and well cultivated plantations, are fituated near the fouth high road, which I often travelled; and I feldom paffed his houfe without calling to fee him, for it was the feat of virtue, where hospitality, piety, and philosophy, formed the happy family; where the weary traveller and ftranger found a hearty welcome, and from whence it must be his own fault if he departed without being greatly benefited.

After

After refting, and a little recreation for a few days in Savanna, and having in the mean time purchased a good horse, and equipped myself for a journey fouthward, I fet off early in the morning for Sunbury, a fea-port town, beautifully fituated on the main, between Medway and Newport rivers, about fifteen miles fouth of great Ogeeche river. The town and harbour are defended from the furv of the feas by the north and fouth points of St. Helena and South Catharine's iflands; between which is the bar and entrance into the found : the harbour is capacious and fafe, and has water enough for thips of great burthen. I arrived here in the evening, in company with a gentleman, one of the inhabitants, who politely introduced me to one of the principal families, where I fupped and fpent the evening in a circle of genteel and polite ladies and gentlemen. Next day, being defirous of vifiting the islands, I forded a narrow shoal, part of the found, and landed on one of them, which employed me the whole day to explore. The furface and vegetable mould here is generally a loofe fand, not very fertile, except fome fpots bordering on the found and inlets, where are found heaps or mounds of fea-shell, either formerly brought there by the Indians, who inhabited the ifland, or which, were perhaps thrown up in ridges, by the beating furface of the fea: poffibly both these circumstances may have contributed to their formation. Thefe fea fhells, through length of time, and the fubtle penetrating effects of the air, which diffolve them to earth, render these ridges very fertile; and, when clear of their trees, and cultivated, they become profulely productive of almost every kind of vegetable. Here are alfo large plantations of indigo

5

indigo, corn, and potatoes\*, with many other forts of esculent plants. I observed, amongst the shells of the conical mounds, fragments of earthen veffels, and of other utenfils, the manufacture of the ancients : about the centre of one of them, the rim of an earthen pot appeared amongst the shells and earth, which I carefully removed, and drew it out, almost whole: this pot was curiously wrought all over the outfide, reprefenting bafket work, and was undoubtedly effeemed a very ingenious performance, by the people, at the age of its conftruction. The natural produce of these testaceous ridges, befides many of lefs note, are, the great Laurel Tree, (Magnolia grandiflora) Pinus tæda, Laurus Borbonia, Quercus fempervirens, or Live Oak, Prunus Lauro-cerafus, Ilex aquifolium, Corypha palma, Juniperus Americana. The general furface of the ifland being low, and generally level, produces a very great variety of trees, fhrubs, and herbaceous plants; particularly the great long-leaved Pitch-Pine, or Broom-Pine, Pinus paluftris, Pinus íquamofa, Pinus lutea, Gordonia Lafianthus, Liquid ambar (Styraciflua) Acer rubrum, Fraxinus excelcior, Fraxinus aquatica, Quercus aquatica, Quercus phillos, Quercus dentata, Quercus humila varietas, Vaccinium varietas, Andromeda varietas, Prinos varietas, Ilex varietas, Viburnum prunifolium, V. dentatum, Cornus florida, C. alba, C. fanguinea, Carpinus betula, C. oftrya, Itea Clethra alnifolia, Halefia tetraptera, H. diptera, Iva, Rhamnus frangula, Callicarpa, Morus rubra, Sapindus, Caffine, and of fuch as grow near water-courfes, round about ponds and favannas, Fothergilla gardini, Myrica cerifera, Olea Americana, Cyrilla racemiflora,

\* Convolvulus batata.

Magnolia

Magnolia glauca, Magnolia pyramidita, Cercis, Ralmia augustifolia, Kalmia ciliata, Chionanthus, Cephalanthos, Æsculus parva; and the intermediate fpaces, furrounding and lying between the ridges and favannas, are interfected with plains of the dwarf prickly fan-leaved Palmetto, and lawns of grafs variegated with stately trees of the great Broom-Pine, and the fpreading ever-green Water-Oak, either disposed in clumps, or fcatteringly planted by nature. The upper furface, or vegetative foil of the island, lies on a foundation, or stratum, of tenacious cinereous-coloured clay, which perhaps is the principal fupport of the valt growth of timber that arifes from the furface, which is little more than a mixture of fine white fand and diffolved vegetables, ferving as a nurfery bed to hatch or bring into existence the infant plant, and to supply it with aliment and food, fuitable to its delicacy and tender frame, until the roots, acquiring sufficient extent and folidity to lay hold of the clay, foon attain a magnitude and stability fufficient to maintain its station. Probably if this clay were dug out and caft upon the furface, after being meliorated by the faline or nitrous qualities of the air, it would kindly incorporate with the loofe fand, and become a productive and lafting manure.

The roebuck, or deer, are numerous on this ifland; the tyger, wolf, and bear, hold yet fome poffeffion; as alfo raccoons, foxes, hares, fquirrels, rats, and mice, but I think no moles. There is a large ground rat, more than twice the fize of the common Norway rat. In the night time it throws out the earth, forming little mounds, or hillocks. oppoffums are here in abundance, as alfo pole-cats, wild-cats, rattle-fnakes, glafs-fnake, coach-whip fnake, and a variety of other ferpents.

Here

. 7

Here are alfo a great variety of birds, throughout the feafons, inhabiting both fea and land. Firft I fhall name the eagle, of which there are three fpecies. The great grey eagle is the largeft, of great ftrength and high flight; he chiefly preys on fawns and other young quadrupeds.

The bald eagle is likewife a large, ftrong, and very active bird, but an execrable tyrant : he fupports his affumed dignity and grandeur by rapine and violence, extorting unreafonable tribute and fubfidy from all the feathered nations.

The laft of this race I fhall mention is the falco pifcatorius, or fifhing-hawk : this is a large bird, of high and rapid flight; his wings are very long and pointed, and he fpreads a vaft fail, in proportion to the volume of his body. This princely bird fubfifts entirely on fifh which he takes himfelf, fcorning to live and grow fat on the dear earned labours of another; he alfo contributes liberally to the fupport of the bald eagle.

Water-fowl, and the various fpecies of land-birds, alfo abound, most of which are mentioned by Catest, in his Hist. of Carolina, particularly his painted finch (Emberiza Ceris Linn.) exceeded by none of the feathered tribes, either in variety and splendour of dress, or melody of song.

Catefby's ground doves are alfo here in abundance: they are remarkably beautiful, about the fize of a fparrow, and their foft and plaintive cooing perfectly enchanting.

How chafte the dove! " never known to violate the conjugal contract."

She flees the feats of envy and firife, and feeks the retired paths of peace.

The fight of this delightful and productive island, placed in front of the rifing city of Sunbury, quickly induced me to explore it; which I apprehended, from former vifits to this coaft, would exhibit a comprehensive epitome of the history of all the fea-coaft islands of Carolina and Georgia, as likewife in general of the coaft of the main. And though I confidered this excursion along the coaft of Georgia and northern border of Florida, a deviation from the high road of my intended travels, yet I performed it in order to employ to the most advantage the time on my hands, before the treaty of Augusta came on, where I was to attend, about May or June, by defire of the Superintendant, I. Stewart, efq. who, when I was in Charleston, propofed, in order to facilitate my travels in the Indian territories, that, if I would be prefent at the Congrefs, he would introduce my bufinefs to the chiefs of the Cherokees, Creeks, and other nations, and recommend me to their friendship and protection; which promife he fully performed, and it proved of great fervice to me.

Obedient to the admonitions of my attendant fpirit, curiofity, as well as to gratify the expectations of my worthy patron, I again fet off on my fouthern excursion, and left Sunbury, in company with feveral of its polite inhabitants, who were going to Medway meeting, a very large and well conftructed place of worship, in St. John's parish, where I affociated with them in religious exercise, and heard a very excellent fermon, delivered by their pious and truly venerable pastor, the Rev. ---- Ofgood. This respectable congregation is independent, and consist chiefly of families, and profelytes

profelytes to a flock, which this pious man led about forty years ago, from South Carolina, and fettled in this fruitful district. It is about nine miles from Sunbury to Medway meeting-houfe, which ftands on the high road opposite the Sunbury road. As foon as the congregation broke up, I re-affumed my travels, proceeding down the high road towards Fort Barrington, on the Alatamaha, paffing through a level country, well watered by large streams, branches of Medway and Newport rivers, courfing from extensive fwamps and marshes, their fources : there fwamps are daily clearing and improving into large fruitful rice plantations. aggrandizing the well inhabited and rich district of St. John's parish. The road is straight, spacious, and kept in excellent repair by the industrious inhabitants; and is generally bordered on each fide with a light grove, confifting of the following trees and fhrubs : Myrica, Cerifera, Calycanthus, Halefia tetraptera, Itea, stewartia, Andromeda nitida, Cyrella racemiflora, entwined with bands and garlands of Bignonia fempervirens, B. crucigera, Lonicera, fempervirens and Glycene frutefcens; thefe were overfhadowed by tall and fpreading trees, as the Magnolia grandiflora, Liquid ambar, Liriodendron, Catalpa, Quercus fempervirens, Quercus dentata, Q. Phillos; and on the verges of the canals, where the road was causwaved, flood the Cupreffus difficha, Gordonia Lacianthus, and Magnolia glauca, all planted by nature, and left ftanding, by the virtuous inhabitants, to fhade the road, and perfume the fultry air. The extensive plantations of rice and corn, now in early verdure, decorated here and there with groves of floriferous and fragrant trees and fhrubs, under the cover cover and protection of pyramidal laurels and plumed palms, which now and then break through upon the fight from both fides of the way as we pafs along; the eye at intervals ftealing a view at the humble, but elegant and neat habitation, of the happy proprietor, amidft arbours and groves, all day, and moon-light nights, filled with the melody of the cheerful mockbird, warbling nonpareil, and plaintive turtle-dove, altogether prefent a view of magnificence and joy, inexpreffibly charming and animating.

In the evening I arrived at the feat of the Hon. B. Andrews, efq. who received and entertained me in every respect, as a worthy gentleman could a ftranger, that is, with hearty welcome, plain but plentiful board, free conversation and liberality of fentiment. I fpent the evening very agreeably, and the day following (for I was not permitted to depart fooner): I viewed with pleafure this gentleman's exemplary improvements in agriculture; particularly in the growth of rice, and in his machines for fhelling that valuable grain, which ftands in the water almost from the time it is fown, until within a few days before it is reaped, when they draw off the water by fluices, which ripens it all at once, and when the heads or panicles are dry ripe, it is reaped and left ftanding in the field, in fmall ricks, until the ftraw is quite dry, when it is hauled, and ftacked in the barn yard. The machines for cleaning the rice are worked by the force of water. They ftand on the great refervoir which contains the waters that flood the rice fields below.

Towards the evening we made a little party at fifhing. We chofe a fhaded retreat, in a beautiful grove of magnolias, myrtles, and fweet bay trees, which

which were left flanding on the bank of a fine creek, that, from this place, took a flow ferpentine courfe through the plantation. We prefently took fome fish, one kind of which is very beautiful; they call it the red-belly. It is as large as a man's hand, nearly oval and thin, being compressed on each fide; the tail is beautifully formed; the top of the head and back of an olive green, befprinkled with ruffet fpecks; the fides of a fea green, inclining to azure, infenfibly blended with the olive above, and beneath lightens to a filvery white, or pearl colour, elegantly powdered with fpecks of the finest green, ruffet and gold; the belly is of a bright fcarlet red, or vermilion, darting up rays or fiery ftreaks into the pearl on each fide; the ultimate angle of the branchioftega extends backwards with a long fpatula, ending with a round or oval particoloured fpot, reprefenting the eye in the long feathers of a peacock's train, verged round with a thin flame-coloured membrane, and appears like a brilliant ruby fixed on the fide of the fish; the eves are large, encircled with a fiery iris; they are a voracious fish, and are easily caught with a fuitable bait. Sepancio rubnicanda

The next morning I took leave of this worthy family, and fet off for the fettlements on the Alatamaha, ftill purfuing the high road for Fort Barrington, till towards noon, when I turned off to the left, following the road to Darian, a fettlement on the river twenty miles lower down, and near the coaft. The fore part of this day's journey was pleafant, the plantations frequent, and the roads in tolerable good repair; but the country being now lefs cultivated, the roads became bad. I purfued my journey almost continually through fwamps and creeks, waters of Newport and Sapello, till night, when

12

when I loft my way; but coming up to a fence, I faw a glimmering light, which conducted me to a houfe, where I ftayed all night, and met with very civil entertainment. Early next morning I fet off again, in company with the overfeer of the farm, who piloted me through a large and difficult fwamp, when we parted; he in chafe of deer, and I towards Darian. I rode feveral miles through a high forest of pines, thinly growing on a level plain, which admitted an ample view, and a free circulation of air, to another fwamp; and croffing a confiderable branch of Sapello river, I then came to a fmall plantation by the fide of another fwamp: the people were remarkably civil and hofpitable. The man's name was M'Intofh, a family of the first colony established in Georgia, under the conduct of general Oglethorpe. Was there ever fuch a fcene of primitive fimplicity, as was here exhibited, fince the days of the good king Tammany. The venerable grey-headed Caledonian fmilingly meets me coming up to his houfe. "Welcome, ftranger; come in, and reft; the air is now very fultry; it is a very hot day." I was there treated with fome excellent venifon, and here found friendly and fecure shelter from a tremendous thunder storm, which came up from the N. W. and foon after my arrival began to difcharge its fury all around. Stepping to the door to observe the progress and direction of the tempest, the fulgour and rapidity of the ftreams of lightning, paffing from cloud to cloud, and from the clouds to the earth, exhibited a very awful fcene; when inftantly the lightning, as it were, opening a fiery chafm in the black cloud, darted with inconceivable rapidity on the trunk of a large pine tree, that flood thirty or forty yards from me, and fet it in a blaze. The flame inftantly afcended

#### TRAVELS IN

afcended upwards of ten or twelve feet, and continued flaming about fifteen minutes, when it was gradually extinguished by the deluges of rain that tell upon it.

I faw here a remarkably large turkey of the native wild breed: his head was above three feet from the ground when he ftood erect; he was a ftately beautiful bird, of a very dark dufky brown colour, the tips of the feathers of his neck, breaft, back, and fhoulders, edged with a copper colour, which in a certain exposure looked like burnifhed gold, and he feemed not infentible of the fplendid appearance he made. He was reared from an egg, found in the foreft, and hatched by a hen of the common domeftic fowl.

Our turkey of America is a very different fpecies from the meleagris of Afia and Europe; they are nearly thrice their fize and weight. I have feen feveral that have weighed between twenty and thirty pounds, and fome have been killed that weighed near forty. They are taller, and have a much longer neck proportionally, and likewife longer legs, and ftand more erect; they are alfo very different in colour. Ours are all, male and female, of a dark brown colour, not having a black feather on them; but the male exceedingly fplendid, with changeable colours. In other particulars they differ not.

The tempeft being over, I waited till the floods of rain had run off the ground, then took leave of my friends, and departed. The air was now cool and falubrious, and riding feven or eight miles, through a pine foreft, I came to Sapello bridge, to which the falt tide flows. I here ftopped, at Mr. Bailey's, to deliver a letter from the governor. This gentleman received me very civilly, inviting me to ftay with him; but upon my urging the neceffity of my accelerating my journey, he permitted me to proceed to Mr. L. M'Intofh's, near the river, to whofe friendfhip I was recommended by Mr. B. Andrews.

Perhaps, to a grateful mind, there is no intellectual enjoyment, which regards human concerns, of a more excellent nature, than the remembrance of real acts of friendship. The heart expands at the pleafing recollection. When I came up to his door, the friendly man, fmiling, and with a grace and dignity peculiar to himfelf, took me by the hand, and accosted me thus: " Friend Bartram, come " under my roof, and I defire you to make my houfe " your home, as long as convenient to yourfelf; re-" member, from this moment, that you are a part " of my family, and, on my part, I shall endeavour "to make it agreeable," which was verified during my continuance in, and about, the fouthern territories of Georgia and Florida; for I found here fincerity in union with all the virtues, under the influence of religion. I shall yet mention a remarkable inftance of Mr. M'Intofh's friendship and respect for me; which was, recommending his eldeft fon, Mr. John M'Intofh, as a companion in my travels. He was a fenfible virtuous youth, and a very agreeable companion through a long and toilfome journey of near a thousand miles.

Having been greatly refreshed, by continuing a few days with this kind and agreeable family, I prepared to profecute my journey southerly.

15,

CHAP.

## CHAP. III.

I SAT off early in the morning for the Indian trading-houfe, in the river St. Mary, and took the road up the N. E. fide of the Alatamaha to Fort-Barrington. I paffed through a well inhabited diffrict, mostly rice plantations, on the waters of Cathead creek, a branch of the Alatamaha. On drawing near the fort, I was greatly delighted at the appearance of two new beautiful fhrubs, in all their blooming graces. One of them appeared to be a fpecies of Gordonia \* but the flowers are larger, and more fragrant than those of the Gordonia, Lascanthus, and are feffile; the feed veffel is alfo very different. The other was equally diffinguished for beauty and fingularity; it grows twelve or fifteen feet high, the branches afcendant and oppofite, and terminate with large panicles of pale blue tubular flowers, speckled on the infide with crimfon; but, what is fingular, these panicles are ornamented with a number of ovate large bracteæ, as white, and like fine paper, their tops and verges stained with a role red, which. at a little diftance, has the appearance of clufters of rofes, at the extremities of the limbs: the flowers are of the Cl. Pentandria monogynia; the leaves are nearly ovate, pointed and petioled, standing opposite to one another on the branches.

After fifteen miles riding, I arrived at the ferry, which is near the fite of the fort. Here is a confiderable height and bluff on the river, and evident

\* Franklinia Alatahamá

veftiges

veftiges of an ancient Indian town may be feen. fuch as old extensive fields, and conical mounds, or artificial heaps of earth. I here croffed the river, which is about five hundred yards over, in a good large boat, rowed by a Creek Indian, who was married to a white woman; he feemed an active, civil, and fenfible man. I faw large, tall trees of the Nyffa coccinea, fi. Ogeeche, growing on the banks of the river. They grow in the water, near the fhore. There is no tree that exhibits a more defirable appearance than this, in the autumn, when the fruit is ripe, and the tree divested of its leaves; for then they look as red as fcarlet, with their fruit, which is of that colour alfo. It is of the fhape, but larger than the olive, containing an agreeable acid juice. The leaves are oblong lanceolate and entire, fomewhat hoary underneath; their upper furface of a full green, and fhining; the petioles fhort, pedunculis multifloris. The most northern fettlement of this tree, yet known, is on Great Ogeeche, where they are called Ogeeche limes, from their acid fruit being about the fize of limes, and their being fometimes used in their ftead.

Being fafely landed on the oppofite bank, I mounted my horfe, and followed the high road to the ferry on St. Ille, about fixty miles fouth of the Alatamaha, paffing through an uninhabited wildernefs. The fudden transition from rich uncultivated fettlements, to high pine forefts, dark and graffy favannas, forms in my opinion no difagreeable contrafts; and the new objects of obfervation in the works of nature foon reconcile the furprifed imagination to the change. As foon as I had loft fight of the river, afcending fome fand-hills, I obferved C a new a new and most beautiful species of Annona, having clufters of large white fragrant flowers; and a diminutive but elegant Kalmia. The stems are very fmall, feeble, and for the most part undivided, furnished with little ovate pointed leaves, and terminate with a fimple racemi, or fpike of flowers, falver formed, and of a deep rofe red. The whole plant is ciliated. It grows in abundance all over the moift favannas, but more efpecially near ponds and bay-fwamps. In fimilar fituations, and commonly a near neighbour to this new Kalmia, is feen a very curious species of Annona. It is very dwarf, the ftems feldom extending from the earth more than a foot or eighteen inches, and are weak and almost decumbent. The leaves are long, extremely narrow, almost lineal. However, fmall as they are, they retain the figure common to the fpecies, that is, lanceolate, broadeft at the upper end, and attenuating down to the petiole, which is very fhort; their leaves fland alternately, nearly erect, forming two feries, or wings, on the arcuated ftems. The flowers, both in fize and colour, refemble those of the Antrilobe, and are fingle from the axillæ of the leaves on incurved pendunculi, nodding downwards. I never faw the fruit. The dens, or caverns, dug in the fand-hills, by the great land-tortoife, called here Gopher\*, prefent a very fingular appearance : these vast caves are their castles and diurnal retreats, from whence they iffue forth in the night, in fearch of prey. The little mounds, or hillocks of fresh earth, thrown up in great numbers in the night, have allo a curious appearance.

In the evening I arrived at a cow-pen, where there was a habitation, and the people received me

\* Teftudo Polyphemus.

very

very civilly. I staid here all night, and had for fupper plenty of milk, butter, and very good cheefe of their own make, which is a novelty in the maritime parts of Carolina and Georgia; the inhabitants being chiefly supplied with it from Europe and the northern states. The next day's progress, in general, prefented fcenes fimilar to the preceding, though the land is lower, more level and humid, and the produce more varied : high open forests of stately pines, flowery plains, and extensive green favannas, chequered with the incarnate Chironia pulcherrima, and Afclepias fragrans, perfumed the air whilft they pleafed the eye. I met with fome troublesome cane fwamps, faw herds of horned cattle, horfes and deer, and took notice of a procumbent species of Hibifcus, the leaves palmated, the flowers large and expanded, pale yellow and white, having a deep crimfon eye; the whole plant, except the corolla, armed with fliff hair. I alfo faw a beautiful fpecies of Lupin, having pale green villous lingulate \* leaves; the flowers are difpofed in long erect fpikes; fome plants produce flowers of the finest celestial blue, others incarnate, and fome milk white, and though they all three feem to be varieties of one species, yet they associate in separate communities, sometimes approaching near each other's border, or in fight at a diftance. Their districts are fituated on dry fandy heights, in open pine forefts, which are naturally thin of undergrowth, and appear to great advantage; generally where they are found, they occupy many acres of furface. The vegetative mould is composed of fine white fand, mixed, and coloured, with diffolved and calcined vegetable fubftances;

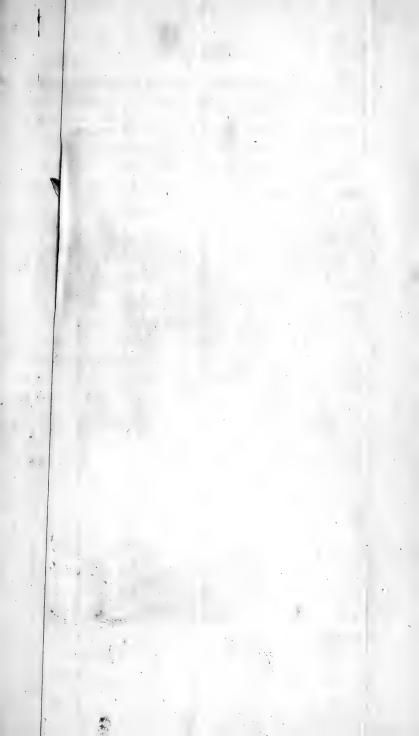

\* Lupinus breunis, foliis integerimis oblongis villofis.

but

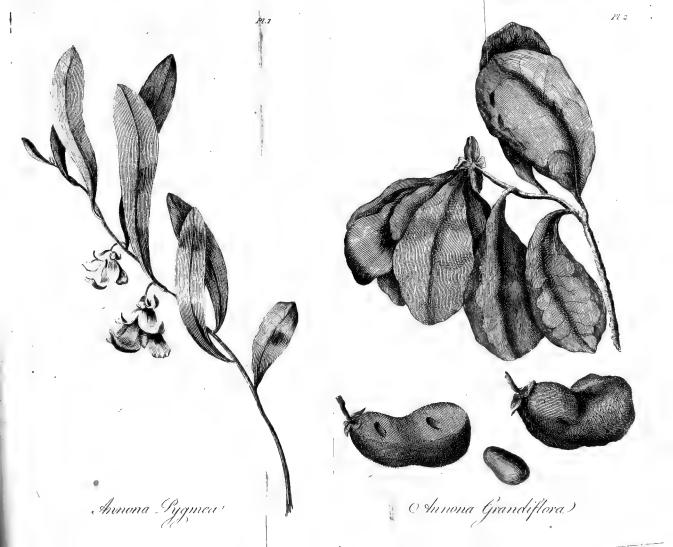

but this ftratum is not very deep, and covers one of a tenacious cinereous coloured clay, as we may obferve by the earth adhering to the roots of trees, torn up by ftorms, &c. and by the little chimnies, or air holes of cray-fifh, which perforate the favannas. Turkeys, quails, and fmall birds, are here to be feen; but birds are not numerous in defert forefts; they draw near to the habitations of men, as I have conftantly obferved in all my travels.

I arrived at St. Ille's in the evening, where I lodged; and next morning, having croffed over in a ferry boat, fet forward for St. Mary's. The fituation of the territory, its foil and productions, between thefe two laft rivers, are nearly fimilar to thofe which I had paffed over, except that the favannas are more frequent and extensive.

It may be proper to obferve, that I had now paffed the utmost frontier of the white fettlements on that border. It was drawing on towards the close of day, the fkies ferene and calm, the air temperately cool, and gentle zephyrs breathing through the fragrant pines; the profpect around enchantingly varied and beautiful; endlefs green favannas, chequered with coppices of fragrant shrubs, filled, the air with the richeft perfume. The gaily attired plants which enamelled the green had begun to imbibe the pearly dew of evening; nature feemed filent, and nothing appeared to ruffle the happy moments of evening contemplation; when, on a fudden, an Indian appeared croffing the path, at a confiderable diftance before me. On perceiving that he was armed with a rifle, the first fight of him ftartled me, and I endeavoured to elude his fight, by flopping my pace, and keeping large trees between us; but he efpied me, and turning fhort about.

about, fet fpurs to his horfe, and came up on full gallop. I never before this was afraid at the fight of an Indian, but at this time, I must own that my fpirits were very much agitated: I faw at once, that being unarmed, I was in his power; and having now but a few moments to prepare, I refigned. myfelf entirely to the will of the Almighty, trufting to his mercies for my prefervation : my mind then became tranquil, and I refolved to meet the dreaded foe with refolution and chearful confidence. The intrepid Siminole ftopped fuddenly, three or four yards before me, and filently viewed me, his countenance angry and fierce, fhifting his rifle from shoulder to shoulder, and looking about inftantly on all fides. I advanced towards him, and with an air of confidence offered him my hand, hailing him, brother; at this he haftily jerked back his arm, with a look of malice, rage, and difdain, feeming every way difcontented; when again looking at me more attentively, he inftantly fpurred up to me, and with dignity in his look and action, gave me his hand. Poffibly the filent language of his foul, during the moment of fuspense (for I believe his defign was to kill me when he first came up) was after this manner: " White man, thou " art my enemy, and thou and thy brethren may " have killed mine ; yet it may not be fo, and even " were that the cafe, thou art now alone, and in-" my power. Live; the great Spirit forbids me " to touch thy life; go to thy brethren, tell them " thou faweft an Indian in the forefts, who knew " how to be humane and compaffionate." In fine, we shook hands, and parted in a friendly manner, in the midft of a dreary wildernefs; and he informed me of the course and distance to the tradinghouse, where I found he had been extremely illtreated the day before.

Inow

21

#### TRAVELS IN

I now fat forward again, and after eight or ten miles riding, arrived at the banks of St. Mary's, opposite the stores, and got safe over before dark. The river is here about one hundred yards across, has ten feet water, and, following its courfe, about fixty miles to the fea, though but about twenty miles by land. The trading company here received and treated me with great civility. On relating my adventures on the road, particularly the laft with the Indian, the chief replied, with a countenance that at once bespoke furprise and pleasure, " My friend, confider yourfelf a fortunate man : " that fellow," faid he, " is one of the greatest vil-" lains on earth, a noted murderer, and outlawed " by his countrymen. Last evening he was here, " we took his gun from him, broke it in pieces, " and gave him a fevere drubbing : he, however, " made his escape, carrying off a new rifle gun, " with which, he faid, going off, he would kill " the first white man he met."

On ferioufly contemplating the behaviour of this Indian towards me, fo foon after his ill treatment, the following train of fentiments infenfibly crowded in upon my mind.

Can it be denied, but that the moral principle, which directs the favages to virtuous and praifeworthy actions, is natural or innate? It is certain they have not the affiftance of letters, or thofe means of education in the fchools of philofophy, where the virtuous fentiments and actions of the most illustrious characters are recorded, and carefully laid before the youth of civilized nations: therefore this moral principle must be innate, or they must be under the immediate influence and guidance of a more divine and powerful preceptor, who,

#### NORTH AMERICA.

-23

who, on these occasions, instantly inspires them, and as with a ray of divine light, points out to them at once the dignity, propriety, and beauty of virtue.

The land on, and adjacent to, this river, notwithstanding its arenaceous furface, appears naturally fertile. The peach trees are large, healthy, and fruitful; and Indian corn, rice, cotton, and indigo, thrive exceedingly. This fandy furface, one would fuppofe, from its loofe texture, would poffefs a percolating quality, and fuffer the rainwaters quickly to drain off; but it is quite the contrary, at least in these low maritime fandy countries of Carolina and Florida, beneath the mountains; for in the fands, even the heights, where the arenaceous stratum is perhaps five, eight, and ten feet above the clay, the earth, even in the longest droughts, is moist an inch or two under the surface ; whereas, in the rich tenacious low lands, at fuch times, the ground is dry, and, as it were, baked many inches, and fometimes fome feet deep, and the crops, as well as almost all vegetation, fuffer in fuch foils and fituations. The reafon of this may be, that this kind of earth admits more freely of a transpiration of vapours, arising from intestine watery canals to the furface; and probably these vapours are impregnated with faline or nitrous principles, friendly and nutritive to vegetables; however, of these causes and secret operations of nature I am ignorant, and refime again my proper employment, that of difcovering and collecting data for the exercife of more able physiologists.

The favannas about St. Mary's, at this feafon, difplay a very charming appearance of flowers and verdure; their more elevated borders are varied with

with beds of violets, lupins, Amaryllis atamafco, and plants of a new and very beautiful fpecies of Mimofa fenfitiva, which I think as admirable and more charming than the celebrated Humble plant, equally chafte and fearful of the hafty touch of the furprifed admirer. The flower is larger, of a bright damafk role colour, and exceedingly fragrant: the whole plant is destitute of prickles, but hairy: it is procumbent, reclining itself upon the green turf, and from thefe trailing branches proceeds an upright peduncle, fix or eight inches high, fupporting an oblong head of flowerets, which altogether, at a fmall diftance, have the appearance of an exuberant field of clover; and, what is fingular, and richly varies the fcene, there are intersperfed patches of the fame fpecies of plants, having flowers of the finest golden yellow, and others fnow white; but the incarnate is most prevalent. Magnolia glauca, Itea Clethra, Chionanthus, Gordonia lafianthus, llex augustifolium, Olea Americana, Hopea tinctoria, &c. are feated in detached groves or clumps, round about the ponds or little lakes, at the lower end of the favannas. I obferved, growing on the banks of this fequeftered river, the following trees and fhrubs : Quercus fempervirents, Q. aquatica, Q. Phillos, Q. dentata, Nyssa aquatica, N. fylvatica, N. Ogeeche, fi. coccinea, Cupreffus difticha, Fraxinus aquatica, Rhamnus frangula, Prunus laurocerafa, Cyrilla racemiflora, Myrica cerifera, Andromeda ferruginia, Andr. nitida, and the great evergreen Andromeda of Florida, called Pipe-ftem Wood, to which I gave the name of Andromeda formofiffima, as it far exceeds in beauty every one of this family.

The river St. Mary has its fource from a vaft lake, or marsh, called Ouaquaphenogaw, which lies between

between Flint and Oakmulge rivers, and occupies a fpace of near three hundred miles in circuit. This vaft accumulation of waters, in the wet feafon. appears as a lake, and contains fome large islands or knolls, of rich high land; one of which the prefent generation of the Creeks reprefent to be a most blifsful fpot of the earth; they fay it is inhabited by a peculiar race of Indians, whole women are incomparably beautiful; they alfo tell you that this terrestrial paradife has been feen by fome of their enterprifing hunters, when in purfuit of game, who being loft in inextricable fwamps and bogs, and on the point of perifhing, were unexpectedly relieved by a company of beautiful women, whom they call daughters of the fun, who kindly gave them fuch provisions as they had with them, which were chiefly fruit, oranges, dates, &c. and fome corn cakes, and then enjoined them to fly for fafety to their own country; for that their hufbands were fierce men, and cruel to ftrangers : they further fay, that these hunters had a view of their fettlements, fituated on the elevated banks of an island, or promontory, in a beautiful lake; but that in their endeavours to approach it, they were involved in perpetual labyrinths, and, like enchanted land, ftill as they imagined they had just gained it, it feemed to fly before them, alternately appearing and difappearing. They refolved, at length, to leave the delufive purfuit, and to return; which, after a number of inexpressible difficulties, they effected. When they reported their adventures to their countrymen, their young warriors were enflamed with an irrefiftible defire to invade, and make a conquest of, so charming a country; but all their attempts hitherto have proved abortive, never having been able again to find that enchanting

#### TRAVELS IN

26

chanting ipot, nor even any road or pathway to it; yet they fay that they frequently meet with certain figns of its being inhabited, as the building of canoes, footsleps of men, &c. They tell another flory concerning the inhabitants of this fequeftered country, which feems probable enough, which is, that they are the posterity of a fugitive remnant of the ancient Yamafes, who escaped maffacre after a bloody and decifive conflict between them and the Creek nation (who, it is certain, conquered, and nearly exterminated, that once powerful people), and here found an alylum, remote and fecure from the fury of their proud conquerors. It is, however, certain that there is a vaft lake, or drowned fwamp, well known, and often vifited both by white and Indian hunters, and on its environs the most valuable hunting grounds in Florida, well worth contending for, by those powers whose territories border upon it. From this great fource of rivers \*, St. Mary arifes, and meanders through a vast plain and pine forest, near an hundred and fifty miles to the ocean, with which it communicates, between the points of Amelia and Talbert islands; the waters flow deep and gently down from its fource to the fea.

Having made my obfervations on the vegetable productions of this part of the country, and obtained specimens and feeds of some curious trees and shrubs (which were the principal objects of this excursion) I returned by the same road to the Alatamaha, and arrived safe again at the seat of my good friend, L. Muntosh, Esq. where I tarried a few days to rest and refresh myself, and to wait for

\* Source of rivers. It is faid, that St. Ille, St. Mary, and the beautiful river Little St. Juan, which difcharges its waters into the bay of Apalachi, at St. Mark's, take their rife from this fwamp.

#### NORTH AMERICA.

my young companion and fellow pilgrim, Mr. John M'Intofh, who, being fond of the enterprife, had been fo active during my abfence, in the neceffary preparations, that we had nothing to wait for now but Mrs. M'Intofh's final confent to give up her fon to the perils and hardfhips of fo long a journey; which difficult point being fettled, we fet off with the prayers and benevolent wifhes of my companion's worthy parents.

## CHAP.

#### TRAVELS IN

## CHAP. IV.

EARLY in the morning, we mounted our horfes, and in two days arrived in Savanna; here we learned that the fuperintendant of Indian affairs had left the capital, and was on his way to Augusta. I remained but one day in Savanna, which was employed in making up and forwarding the collections for Charleston.

The day following we fet off for Augusta, which is on Savanna river, at least an hundred and fifty miles by land from the capital, and about three hundred by water. We followed the course of the river, and arrived there after having had a prosperous journey, though a little incommoded by the heats of the feason.

As nothing very material occurred on the road, I fhall proceed to give a fummary account of the obfervations I made concerning the foil, fituation, and natural productions of the country.

In our progrefs from the fea coaft, we rife gradually, by feveral fteps or afcents, in the following manner: First, from the fea-coast, fifty miles back, is a level plain, generally of a loose fandy soil, producing spacious high forests, of pinus tæda, P. lutea, P. squarrosa, P. echinata, I. Quercus sempervirens, 2 Quercus aquatica, 3. Q. phillos, 4. Q. tinctoria, 5. Q. dentata, 6. Q. prinos, 7. Q. alba, 8. Q. sinuata, 9. Q. rubra, Liriodendron tuli-

1. Live Oak. 2. Della-leaved Water Oak. 3. Willow-leaved Oak. 4. Great Black Oak. 5. Narrow-leaved Wintergreen Oak. 6. Swamp White Oak. 7. White Oak. 8. Spanish Oak. 9. Red Oak.

pifera,

pifera, Liquidambar styraciflua, Morus rubra, Cercis tilia, Populus heterophylla, Platanus occidentalis, Laurus fassafras, Laurus Borbonia, Hopea tinctoria, Fraxinus excelsior, Nysfa, Ulmus, Juglans exaltata, Halefa, Stewartia. Nearly one third of this vaft plain is what the inhabitants call fwamps, which are the fources of numerous fmall rivers and their branches : these they call falt rivers, becaufe the tides flow near to their fources. and generally carry a good depth and breadth of water for fmall craft, twenty or thirty miles upwards from the fea, when they branch and fpread abroad like an open hand, interlocking with each other, and forming a chain of fwamps across the Carolinas and Georgia, feveral hundred miles parallel with the fea coaft. These swamps are fed and replenished constantly by an infinite number of rivulets and rills, which fpring out of the first bank or afcent : their native trees and fhrubs are, befides most of those already enumerated above, as follow: Acer rubrum, Nysla aquatica, Chionanthus, Celtis, Fagus fylvatica, Sambricus; and the higher knolls afford beautiful clumps of Azalea nuda and Aznalea viscofa, Corypha palma, Corypha pumila, and Magnolia grandiflora; befides, the whole furface of the ground between the trees and fhrubs appear to be occupied with canes (Arundo gigantea) entangled with festoons of the floriferous Glycine frutescens, Bignonia fempervirens, Glycine apios, Smilax, various species, Bignonia crucigera, Bign. radicans, Lonicera fempervirens, and a multitude of other trees, fhrubs, and plants lefs confpicuous; and, in very wet places, Cupreffus difficha. The upper foil of these swamps is a perfectly black, foapy, rich earth, or stiff mud, two or three feet deep, on a foundation or stratum of calcareous fossil, which

#### TRAVELS IN

which the inhabitants call white marle; and this is the heart or ftrength of thefe fwamps: they never wear out or become poor, but, on the contrary, are more fertile by tillage; for when they turn up this white marle, the air and winter frofts caufing it to fall like quicklime, it manures the furface: but it has one difadvantage, that is, in great droughts, when they cannot have water fufficient in their refervoirs to lay the furface of the ground under water, it binds, and becomes fo tough as to burn and kill the crops, efpecially the old cleared lands; as, while it was frefh and new, the great quantity of rotten wood, roots, leaves, &c. kept the furface loofe and open. Severe droughts feldom happen near the fea coaft.

We now rife a bank of confiderable height, which runs nearly parallel to the coaft, through Carolina and Georgia: the afcent is gradual by feveral flights or steps, for eight or ten miles, the perpendicular height whereof, above the level of the ocean, may be two or three hundred feet (and thefe are called the fand-hills), when we find ourfelves on the entrance of a vaft plain, generally level, which extends weft fixty or feventy miles, rifing gently as the former, but more perceptibly. This plain is mostly a forest of the great long-leaved pine (P. paluftris Linn.) the earth covered with grafs, interfperfed with an infinite variety of herbaceous plants, and embellished with extensive favannas, always green, fparkling with ponds of water, and ornamented with clumps of evergreen, and other trees and fhrubs, as Magnolia grandiflora, Magnolia glauca, Gordonia, Illex aquifolium, Quercus, various fpecies, Laurus Borbonia, Chionanthus, Hopea tinctoria, Cyrilla, Kalmia angustifolia, Andromeda, varieties.

rieties, Viburnum, Azalea, Rhus vernix, Prinos, varieties, Fothergilla, and a new fhrub of great beauty and fingularity: it grows erect, feven or eight feet high; a multitude of erect ftems arife from its root; thefe divide themfelves into afcendant branches, which are garnifhed with abundance of narrow lanceolate obtufe pointed leaves, of a light green, fmooth and fhining. Thefe branches, with their many fubdivifions, terminate in fimple racemes of pale incarnate flowers, which make a fine appearance among the leaves; the flowers are fucceeded by deficcated triquetrous pericarpi, each containing a fingle kernel.

The loweft fides of thefe favannas are generally joined by a great cane fwamp, varied with coppices and hommocks of the various trees and fhrubs already mentioned. In thefe fwamps feveral rivulets take their rife, which drain them and the adjoining favannas, and thence meandering to the rivers through the forefts, with their banks decorated with fhrubs and trees. The earth under this level plain may be defcribed after the following manner: the upper furface, or vegetative mould, is a light fandy loam, generally nine inches or a foot deep, on a ftratum of cinereous coloured clay, except the fand-hills, where the loofe fandy furface is much deeper upon the clay; ftone of any fort, or gravel, is feldom feen.

The next afcent, or flight, is of much greater and more abrupt elevation, and continues rifing by broken ridges and narrow levels, or vales, for ten or fifteen miles, when we reft again on another extensive nearly level plain of pine forefts, mixed with various other foreft trees, which continues weft forty or fifty miles farther, and exhibits much the

the fame appearance with the great forest last mentioned; its vegetable productions nearly the fame, excepting that the broken ridges by which we afcend to the plain are of a better foil; the vegetative mould is fixed with particles of clay and fmall gravel, and the foil of a dufky brown colour, lying on a stratum of reddifh brown tough clay. The trees and fhrubs are, Pinus tæda, great black Oak, Quercus tinctoria, Q. rubra, Laurus, Saffafras, Magnolia grandiflora, Cornus Florida, Cercis, Halefia, Juglans, acuminata, Juglans exaltata, Andromeda arborea : and, by the fides of rivulets (which wind about and between these hills and fwamps, in the vales) Styrax latifolia, Ptelea trifoliata, Stewartia, Calycanthus, Chionanthus, Magnolia tripetala, Azalea, and others.

Thus have I endeavoured to give the reader a fhort and natural defcription of the vaft plain lying between the region of Augusta and the fea coast; for from Augusta the mountainous country begins (when compared to the level fandy plain already passed), although it is at least an hundred and fifty miles west, thence to the Cherokee or Apalachean mountains; and this space may with propriety be called the hilly country, every where fertile and delightful, continually replenished by innumerable rivulets, either coursing about the fragrant hills, or fpringing from the rocky precipices, and forming many cascades; the coolness and purity of which waters invigorate the air of this otherwise hot and fultry climate.

The village of Augusta is fituated on a rich and fertile plain, on the Savanna river; the buildings are near its banks, and extend nearly two miles up to the cataracts, or falls, which are formed by the first first chain of rocky hills, through which this famous river forces itself, as if impatient to repose on the extensive plain before it invades the ocean. When the river is low, which is during the fummer months, the cataracts are four or five feet in height across the river, and the waters continue rapid and broken, rushing over rocks five miles higher up: this river is near five hundred yards broad at Augusta.

A few days after our arrival at Augusta, the chiefs and warriors of the Creeks and Cherokees being arrived, the Congress and the business of the treaty came on, and the negociations continued undetermined many days; the merchants of Georgia demanding at least two millions of acres of land from the Indians, as a difcharge of their debts. due, and of long ftanding: the Creeks, on the other hand, being a powerful, and proud fpirited people, their young warriors were unwilling to fubmit to fo large a demand, and their conduct evidently betrayed a difposition to dispute the ground by force of arms, and they could not at first be brought to liften to reafon and amicable terms ; however, at length, the cool and deliberate counfels of the ancient venerable chiefs, enforced by liberal prefents of fuitable goods, were too powerful inducements for them any longer to refift, and finally prevailed. The treaty concluded in unanimity, peace, and good order; and the honourable fuperintendant, not forgetting his promife to me, at the conclusion, mentioned my bufinefs, and recommended me to the protection of the Indian chiefs and warriors. The prefents being distributed amongst the Indians, they departed, returning home to their towns. A company of fur-D veyors

veyors were appointed, by the governor and council, to afcertain the boundaries of the new purchafe; they were to be attended by chiefs of the Indians, felected and delegated by their countrymen, to affift, and be witneffes that the articles of the treaty were fulfilled, as agreed to by both parties in Congrefs.

Col. Barnet, who was chofen to conduct this bufinefs on the part of the Georgians, a gentleman every way qualified for that important truft, in a very friendly and obliging manner, gave me an invitation to accompany him on this tour.

It was now about the middle of the month of May; vegetation, in perfection, appeared with all her attractive charms, breathing fragrance every where; the atmosphere was now animated with the efficient principle of vegetative life; the arbuftive hills, gay lawns, and green meadows, which on every fide inveft the villa of Augusta, had already received my frequent vifits; and although here much delighted with the new beauties in the vegetable kingdom, and many eminent ones have their fequestered refidence near this place, yet, as I was never long fatisfied with prefent poffeffion, however endowed with every poffible charm to attract the fight, or intrinfic value, to engage and fix the efteem, I was reftlefs to be fearching for more, my curiofity being infatiable.

Thus it is with regard to our affections and attachments, in the more important and interefting concerns of human life.

Upon the rich rocky hills at the cataracts of the gusta, I first observed the perfumed rhododer. ferrugineuid,

ferrugineum, white-robed philadelphus inodorus, and cerulean malva; but nothing in vegetable nature was more pleafing than the odoriferous pancratium fluitans, which almost alone posses the little rocky islets which just appear above the water.

The preparatory bufinels of the furveyors being now accomplifhed, Mr. J. M'Intolh, yet anxious for travelling, and defirous to accompany me on this tour, joined with me the caravan, confifting of furveyors, aftronomers, artifans, chain-carriers, markers, guides, and hunters, befides a very refpectable number of gentlemen, who joined us, in order to fpeculate in the lands, together with ten or twelve Indians, altogether to the number of eighty or ninety men, all or molt of us well mounted on horfeback, befides twenty or thirty pack-horfes, loaded with provisions, tents, and camp equipage.

The fummer feafon now rapidly advancing, the air at mid-day, about this region, was infufferably hot and fultry. We fet off from Augusta, early in the morning, for the Great Buffalo Lick, on the Great Ridge, which feparates the waters of the Savanna and Alatamaha, about eighty miles diftant from Augusta. At this Lick the furveyors were to feparate themfelves, and form three companies, to proceed on different routes. On the evening, of the fecond day's journey, we arrived at a small village on Little River, a branch of the Savanna : this village, called Wrightfborough, was founded by Jof. Mattock, efq. of the fect called guakers. This public spirited man having obtained for himself and his followers a district, comprehending upwards of forty thousand acres of land, gave the new town this name, in honour of Sir James Wright, then Governor of Georgia, who greatly promoted D 2 the

the eftablishment of the fettlement. Mr. Mattock, who is now about feventy years of age, healthy and active, and prefides as Chief Magistrate of the fettlement, received us with great hospitality. The distance from Augusta to this place is about thirty miles; the face of the country is chiefly a plain of high forests, favannas, and cane fwamps, until we approach Little River, when the landscape varies, prefenting to view high hills and rich vales. The foil is a deep, rich, dark mould, on a deep stratum of reddiff brown tenacious clay, and that on a foundation of rocks which often break through both ftrata, lifting their backs above the furface. The forest trees are chiefly of the deciduous order, as, quercus, tinctoria, q. laciniata, q. alba, q. rubra, to prinus, with many other species; celtis, fagus fylvatica, and, on the rocky hills, fagus caftanea, fag. pumila, quercus caftanea; in the rich vales, juglans nigra, jug. cinerea, gleditfia triacanthos, magnolio acuminata, liriodendron, platanus, fraxinus excelhor, cercea, juglans exaltata, carpinus, morus rubra, calycanthus, halefia, æsculus pavia, æsc. arborea.

Leaving the pleafant town of Wrightfborough we continued eight or nine miles through a fertile plain and high foreft, to the north branch of Little River, being the largeft of the two, croffing which, we entered an extensive fertile plain, bordering on the river, and fhaded by trees of vaft growth, which at once fpoke its fertility. Continuing fome time through these fhady groves, the scene opens, and discloses to view the most magnificent foreft I had ever seen. We rose gradually a floping bank of twenty or thirty feet elevation, and immediately entered this sublime forest. The ground is perfectly a level

a level green plain, thinly planted by nature with the most stately forest trees, such as the gigantic black \* oak (q. tinctoria), liriodendron, juglans nigra, platanus, juglans exaltata, fagus iylvatica, ulmus fylvatica, liquidambar styracistua, whose mighty trunks, seemingly of an equal height, appeared like fuperb columns. To keep within the bounds of truth and reality, in defcribing the magnitude and grandeur of these trees, would, I fear, fail of credibility; yet, I think I can affert, that many of the black oaks meafured eight, nine, ten, and eleven feet diameter five feet above thirty feet as we meafured feveral that were above the ground, girt, and from hence they alcend perfectly straight, with a gradual taper, forty or fifty feet to the limbs; but, below five or fix feet, thefe trunks would meafure a third more in circumference, on account of the projecting jambs, or fupports, which are more or lefs, according to the number of horizontal roots that they arife from : the tulip tree, liquidambar, and beech, were equally flately.

Not far diftant from the terrace, or eminence, overlooking the low grounds of the river, many very magnificent monuments of the power and induftry of the ancient inhabitants of thefe lands are vifible. I obferved a flupendous conical pyramid, or artificial mount of earth, vaft tetragon terraces, and a large funken area, of a cubical form, encompaffed with banks of earth; and certain traces of a larger Indian town, the work of a powerful nation, whofe period of grandeur perhaps long preceded the difcovery of this continent.

<sup>\*</sup> Gigantic black oak. Querc. tinctoria ; the bark of this fpecies of oak is found to afford a valuable 'yellow dye. This tree is known by the name of black oak in Pennfylvania, New-Jerfey, New-York, and New-England.

After about feven miles progrefs through this forest of gigantic black oaks, we enter on territories, which exhibit more varied fcenes : the land rifes almost infensibly by gentle ascents, exhibiting defart plains, high forests, gravelly and story ridges, ever in fight of rapid rivulets; the soil, as already defcribed. We then paffed over large rich favannas, or natural meadows, wide fpreading cane fwamps, and frequently old Indian fettlements. now deferted and overgrown with forefts. Thefe are always on or near the banks of rivers, or great fwamps, the artificial mounts and terraces elevating them above the furrounding groves. I obferved, in the ancient cultivated fields, 1. diofpyros, 2. gleditfia triacanthos, 3. prunus chicafaw, 4. callicarpa, 5. morus rubra, 6. juglans exaltata, 7. juglans nigra, which inform us, that these trees were cultivated by the ancients, on account of their fruit, as being wholefome and nourifhing food. Though these are natives of the forest\*, yet they thrive better, and are more fruitful, in cultivated plantations, and the fruit is in great estimation with the prefent generation of Indians, particularly juglans exaltata, commonly called shell-barked hiccory. The Creeks ftore up the laft in their towns. I have feen above an hundred bushels of these nuts belonging to one family. They pound them to pieces, and then caft them into boiling water, which, after paffing through fine strainers, preferves the most oily part of the liquid : this they call by a name which fignifies hiccory milk; it is as fweet and rich as fresh cream, and is an ingredient in most of their cookery, especially homony and corn cakes.

After

<sup>\*</sup> The Chicafaw plumb I think must be excepted, for though certainly a native of America, yet I never faw it wild in the forest, but always in old deferted Indian plantations: I suppose it to have been brought from the S. W. beyond the Miffifippi, by the Chicafaws.

After four days moderate and pleafant travelling, we arrived in the evening at the Buffalo Lick. This extraordinary place occupies feveral acres of ground, at the foot of the S. E. promontory of the Great Ridge, which, as before obferved, divides the rivers Savanna and Alatamaha. A large cane fwamp and meadows, forming an immense plain, lie S. E. from it; in this fwamp I believe the head branches of the great Ogeeche river take their rife. The place called the Lick contains three or four acres, is nearly level, and lies between the head of the cane fwamp and the afcent of the Ridge. The earth, from the superficies to an unknown depth, is an almost white orcinereous coloured tenacious fattifh clay, which all kinds of cattle lick into great caves, purfuing the delicious vein. It is the common opinion of the inhabitants, that this clay is impregnated with faline vapours, arifing from foffile falts deep in the earth; but I could difcover nothing faline in its tafte, but I imagined an infipid fweet-Horned cattle, horfes, and deer, are immonefs. derately fond of it, infomuch, that their excrement, which almost totally covers the earth to fome diftance round this place, appears to be perfect clay; which, when dried by the fun and air, is almost as hard as brick.

We were detained at this place one day, in adjufting and planning the feveral branches of the furvey. A circumftance occurred during this time, which was a remarkable inftance of Indian fagacity, and had nearly difconcerted all our plans, and put an end to the bufinefs. The furveyor having fixed his compafs on the ftaff, and being about to afcertain the courfe from our place of departure, which was to ftrike Savanna river at the confluence of a certain river, about feventy miles diftance from us; juft

just as he had determined upon the point, the Indian chief came up, and obferving the course he had fixed upon, fpoke, and faid it was not right; but that the courfe to the place was fo and fo, holding up his hand, and pointing. The furveyor replied, that he himfelf was certainly right, adding, that that little inftrument (pointing to the compass) told him fo, which, he faid, could not err. The Indian anfwered, he knew better, and that the little wicked inftrument was a liar; and he would not acquiefce in its decifions, fince it would wrong the Indians out of their land. This miltake (the furveyor proving to be in the wrong) difpleafed the Indians; the dispute arose to that height, that the chief and his party had determined to break up the bufineis, and return the fhortest way home, and forbad the furveyors to proceed any further : however, after fome delay, the complaifance and prudent conduct of the colonel made them change their refolution; the chief became reconciled, upon condition that the compass should be discarded, and rendered incapable of ferving on this bufinefs; that the chief himfelf fhould lead the furvey; and, moreover, receive an order for a very confiderable quantity of goods.

Matters being now amicably fettled, under this new regulation, the colonel having detached two companies on feparate routes, Mr. M<sup>4</sup>Intofh and myfelf attaching ourfelves to the colonel's party, whofe excursion was likely to be the most extensive and varied, we fet off from the Buffalo Lick, and the Indian chief, heading the party, conducted us on a straight line, as appeared by collateral obfervation, to the defired place. We purfued nearly a north courfe up the Great Ridge, until we came near the branches of Broad River, when we turned off to the right hand, and encamped on a confiderable branch of it. At this place we continued almoft a whole day, conflituting furveyors and aftronomers who were to take the courfe, diftance and obfervations on Broad River, and from thence down to its confluence with the Savanna.

The Great Ridge confifts of a continued high foreft; the foil fertile, and broken into moderately elevated hills, by the many rivulets which have their fources in it. The heights and precipices abound in rock and ftone. The forest trees and other vegetable productions are the fame as already mentioned about Little River: I observed halefia, ftyrax, æsculus pavia, æsc. fylvatica, robinia hispida, magnolia acuminata, mag. tripetala, and fome very curious new fhrubs and plants, particularly the phyfic-nut, or Indian olive. The ftems arife many from a root, two or three feet high ; the leaves fit oppofite on very fhort petioles; they are broad, lanceolate, entire, and undulated, having fmooth furfaces of a deep green colour. From the bosom of each leaf is produced a fingle oval drupe, standing erect, on long slender stems; it has a large kernel, and thin pulp. The fruit isvellow when ripe, and about the fize of an olive. The Indians when they go in purfuit of deer, carry this fruit with them, fuppofing that it has the power of charming or drawing that creature to them; from whence, with the traders, it has obtained the name of the phyfic-nut, which means, with them, charming, conjuring, or fascinating. malva scandens, filix scandens, perhaps a species of trichomanes; the leaves are palmated, or radiated ; it climbs and roves about, on fhrubs, in moift ground. A very fingular and elegant plant, of an unknown

unknown family, called Indian lettuce, made its first appearance in thefe rich vales; it is a biennial; the primary or radical leaves are fomewhat fpatuled, or broad, lanceolate, and obtufe pointed, of a pale vellowifh green, fmooth furface, and of a delicate frame, or texture; thefe leaves fpread equally on every fide, almost reclining on the ground ; from their centre arifes a straight upright stem, five, fix, or leven feet high, fmooth and polifhed : the ground of a dark purple colour, which is elegantly powdered with greenifh yellow fpecks; the ftem, threefourths of its length, is embellished with narrow leaves, nearly of the fame form with the radical ones, placed at regular diffances, in verticilate order. The fuperior one-fourth division of this stem is formed into a pyramidal spike of flowers, rather diffuse; thefe flowers are of the hexandria, large, and expanded; of a dark purple colour, delicately powdered with green, yellow, and red, and divided into fix parts, or petals; thefe are fucceeded by triquetrous dry pericarpi, when ripe,

This great ridge is a vaft extended projection of the Cherokee or Alegany mountains, gradually increafing in height and extent, from its extremity at the Lick, to its union with the high ridge of mountains anciently called the Apalachian mountains; it every where approaches much nearer the waters of the Alatamaha than those of the Savanna. At one particular place, where we encamped, on the Great Ridge, during our repose there part of a day, our hunters going out, understanding that their route was to the low lands on the Ocone, I accompanied them: we had not rode above three miles before we came to the banks of that beautiful river. The cane fwamps, of immenfe extent, and the oak forefts, on the level lands, are

are incredibly fertile; which appears from the tall reeds of the one, and the heavy timber of the other.

Before we left the waters of Broad River, having encamped in the evening on one of its confiderable branches, and left my companions, to retire, as ufual, on botanical refearches, on afcending a fteep rocky hill, I accidentally difcovered a new fpecies of caryophillata (geum odoratiflimum); on reaching to a fhrub my foot flipped, and, in recovering myfelf, I tore up fome of the plants, whofe roots filled the air with animating fcents of cloves and fpicy perfumes.

On my return towards camp, I met my philofophic companion, Mr. M'Intofh, who was feated on the bank of a rivulet, and whom I found highly entertained by a very novel and curious natural exhibition, in which I participated with high relifh. The waters at this place were still and shoal, and flowed over a bed of gravel just beneath a rocky rapid : in this eddy fhoal were a number of little gravelly pyramidal hills, whofe fummits role almost to the furface of the water, very artfully constructed by a fpecies of fmall cray-fifh (cancer macrourus) which inhabited them : here feemed to be their citadel, or place of retreat for their young against the attacks and ravages of their enemy, the goldfish: thefe, in numerous bands, continually infefted them, except at fhort intervals, when fmall detachments of veteran cray-fifh fallied out upon them, from their cells within the gravelly pyramids, at which time a brilliant fight prefented : the little gold fish instantly fled from every fide, darting through the transparent waters like streams of lightning; fome even fprang above the furface, into the air, but all quickly returned to the charge, furrounding the pyramids as before, on the retreat of the cray,

cray-fifh; in this manner the war feemed to be continual.

The gold-fifh is about the fize of the anchovy, nearly four inches long, of a neat flender form; the head is covered with a falade of an ultramarine blue. the back of a reddifh brown, the fides and belly of a flame, or of the colour of a fine red lead; a narrow dufky line runs along each fide, from the gills to the tail; the eyes are large, with the iris like burnished gold. This branch of Broad River is about twelve yards wide, and has two, three, and four feet depth of water, and winds through a fertile vale, almost overshadowed on one fide by a ridge of high hills, well timbered with oak, hiccory, liriodendron, magnolia acuminata, pavia fylvatica, and on their rocky fummits, fagus caftanea rhododendron ferrugineum, kalmia latifolia, cornus Florida, &c.

One of our Indian young men, this evening, caught a very large falmon trout, weighing about fifteen pounds, which he prefented to the colonel, who ordered it to be ferved up for fupper. The Indian ftruck this fifh, with a reed harpoon, pointed very fharp, barbed, and hardened by the fire. The fifh lay clofe under the fteep bank, which the Indian difcovered and ftruck with his reed; inftantly the fifh darted off with it, whilft the Indian purfued, without extracting the harpoon, and with repeated thrufts drowned it, and then dragged it to fhore.

After leaving Broad River, the land rifes very fenfibly, and the country being mountainous, our progrefs became daily more difficult and flow; yet the varied fcen. of pyramidal hills, high forefts, rich vales, ferpentine rivers, and cataracts, fully compenfated

compensated for our difficulties and delays. I obferved the great aconitum napellus, delphinium peregrinum, the carminative angelica lucica<sup>\*</sup>, and cerulean malva.

We at length happily accomplified our line, arriving at the little river, where our hunters bringing in plenty of venifon and turkeys, we had a plentiful feaft at fupper. Next morning we marked the corner tree, at the confluence of Little River and the Savanna, and, foon after, the Indians amicably took leave of us, returning home to their towns.

The rocks and foffils, which conftitute the hills of this middle region, are of various fpecies, as quartfum, ferrum, cos, filex, glarea, arena, ochra, ftalactites, faxum, mica, &c. I faw no figns of marble, plafter, or lime-ftone; yet there are, near Augusta, in the forefts, great piles of a porous friable white rock, in large and nearly horizontal maffes, which feems to be an heterogeneous concrete, confisting of pulverized fea shells, with a small proportion of fand; it is foft, and easily wrought into any form, yet of fufficient confistence for conftructing any building.

As for the animal productions, they are the fame which originally inhabited this part of North America, except fuch as have been affrighted away fince the invation of the Europeans. The buffalo (urus) once fo very numerous, is not at this day to be feen in this part of the country; there are but few elks, and those only in the Apalachian mountains. The dreaded and formidable rattle-fnake is yet too common, and a variety of other ferpents abound, particularly that admirable creature the glass-fnake : I faw a very

\* Called nondo in Virgi ia; by the Creek and Cherokee traders, white root.

large and beautiful one, a little diftance from our camp. The alligator, a fpecies of crocodile, abounds in the rivers and fwamps, near the fea coaft, but is not to be feen above Augusta. Bears, tygers\*, wolves, and wild cats (felis cauda truncata) are numerous enough : and there is a very great variety of papilio and phalena, many of which are admirably beautiful, as well as other infects of infinite variety.

The furveyors having completed their obfervations, we fet off next day on our return to Augusta, taking our route generally through the low lands on the banks of the Savanna. We croffed Broad River, at a newly settled plantation, near its confluence with the Savanna. On my arrival at Augusta, finding myself a little fatigued, I staid there a day or two, and then set off again for Savanna, the capital, where we arrived in good health.

Having, in this journey, met with extraordinary fuccefs, not only in the enjoyment of an uninterrupted flate of good health, and efcaping ill accidents, incident to fuch excursions, through uninhabited wilderness, and an Indian frontier, but also in making a very extensive collection of new difcoveries of natural productions; on the recollection of fo many and great favours and bleffings, I now, with a high fense of gratitude, presume to offer up my fincere thanks to the Almighty, the Creator and Preferver.

\* This creature is called, in Pennfylvania and the northern States, panther; but in Carolina and the fouthern States, is called tyger; it is very ftrong, much larger than any dog, of a yellowish brown, or clay colour, having a very long tail: it is a mischievous animal, and preys on calves, young colts, &c.

CHAP.

### NORTH AMERICA.

# CHAP. V.

HAVING completed my Hortus Siccus, and made up my collections of feeds and growing roots, the fruits of my late weftern tour, and fent them to Charlefton, to be forwarded to Europe, I fpent the remaining part of this feafon in botanical excursions to the low countries, between Carolina and East Florida, and collected feeds, roots and specimens, making drawings of fuch curious subjects as could not be preferved in their native state of excellence.

During this recess from the high road of my travels, having obtained the use of a neat light cyprefs canoe, at Broughton Island, a plantation, the property of the Hon. Henry Laurens, Esq. I stored myself with necessaries for the voyage, and resolved upon a trip up the Alatamaha.

I afcended this beautiful river, on whofe fruitful banks the generous and true fons of liberty fecurely dwell, fifty miles above the white fettlements.

How gently flow thy peaceful floods, O Alatamaha! How fublimely rife to view on thy elevated fhores, yon magnolian groves, from whofe tops the furrounding expanse is perfumed, by clouds of incense, blended with the exhailing balm of the liq idambar, and odours continually arising from circumambient aromatic groves of illicium, myrica, laurus, and bignonia.

When wearied with working my canoe against the impetuous current (which becomes stronger by reason

reason of the mighty floods of the river, with collected force, prefling through the first hilly afcents. where the fhores on each fide prefent to view rocky cliffs rifing above the furface of the water, in nearly flat horizontal maffes, washed smooth by the defcending floods, and which appear to be a compofition, or concrete, of fandy lime-ftone) I refigned my bark to the friendly current, referving to myfelf the controul of the helm. My progrefs was rendered delightful by the fylvan elegance of the groves, cheerful meadows, and high diftant forefts, which in grand order prefented themfelves to view. The winding banks of the river, and the high projecting promontories, unfolded fresh scenes of gran-. deur and fublimity. The deep forefts and diftant hills re-echoed the cheering focial lowings of domestic herds. The air was filled with the loud and fhrill whooping of the wary fharp-fighted crane. Behold, on yon decayed, defoliated cyprefs tree, the folitary wood-pelican, dejectedly perched upon its utmost elevated spire; he there, like an ancient venerable fage, fets himfelf up as a mark of derifion, for the fafety of his kindred tribes. The crving-bird, another faithful guardian, fcreaming in the gloomy thickets, warns the feathered tribes of approaching peril; and the plumage of the fwift failing fquadrons of Spanish curlews (white as the immaculate robe of innocence) gleams in the cerulean fkies.

Thus fecure and tranquil, and meditating on the marvellous fcenes of primitive nature, as yet unmodified by the hand of man, I gently defcended the peaceful ftream, on whofe polifhed furface were depicted the mutable fhadows from its penfile banks; whilft myriads of finny inhabitants fported in its pellucid floods.

The

The glorious fovereign of day, clothed in light refulgent, rolling on his gilded chariot, hastened to revisit the western realms. Grey pensive eve now admonished us of gloomy night's hasty approach : I was roused by care to seek a place of secure repose, ere darkness came on.

Drawing near the high fhores, I alcended the fteep banks, where ftood a venerable oak. An ancient Indian field, verdured over with fucculent grafs, and chequered with coppices of fragrant fhrubs, offered to my view the Myrica cerifera, Magnolia glauca, Laurus benzoin, Laur. Borbonia, Rhamnus frangula, Prunus Chicafaw, Prun. laurocerafus, and others. It was nearly encircled with an open forest of stately pines (Pinus palustris) through which appeared the extensive favanna, the fecure range of the fwift roebuck. In front of my landing, and due east, I had a fine prospect of the river and low lands on each fide, which gradually widened to the fea coaft, and gave me an unconfined prospect, whilft the far diftant fea-coast islands, like a coronet, limited the hoary horizon.

My barque being fecurely moored, and having reconnoitred the furrounding groves, and collected fire-wood, I fpread my fkins and blanket by my cheerful fire, under the protecting fhade of the holpitable Live-oak, and reclined my head on my hard but healthy couch. I liftened, undifturbed, to the divine hymns of the feathered fongfters of the groves, whilft the foftly whifpering breezes faintly died away.

The fun now below the western horizon, the moon majeftically rifing in the east; again the tuneful birds became inspired: how melodious is the focial mock-bird! the groves resound the unceasing É cries

cries of the whip-poor-will; the moon about an hour above the horizon; lo! a dark eclipfe \* of her glorious brightnefs came flowly on; at length, a filver thread alone encircled her temples: at this boding change, an univerfal filence prevailed.

Nature now weary, I refigned myfelf to reft; the night paffed over; the cool dews of the morning awoke me; my fire burnt low; the blue fmoke fcarce rofe above the moistened embers; all was gloomy : the late ftarry fkies, now overcaft by thick clouds, warned me to rife and be going. The livid purple clouds thickened on the frowning brows of the morning: the tumultuous winds from the east now exerted their power. O peaceful Alatamaha! gentle by nature! how thou wert ruffled! thy wavy furface disfigured every object, prefenting them obfcurely to the fight, and they at length totally difappeared, whilft the furious winds and fweeping rains bent the lofty groves, and proftrated the quaking grafs, driving the affrighted creatures to their dens and caverns.

The tempeft now relaxed, its impetus being fpent, and a calm ferenity gradually took place; by noon the clouds broke away, the blue fky appeared, the fulgid fun-beams fpread abroad their animating light, and the fteady weftern wind refumed his peaceful reign. The waters were purified, the waves fubfided, and the beautiful river regained its native calmnefs. So it is with the varied and mutable fcenes of human events on the ftream of life. The higher powers and affections of the foul are fo blended and connected with the inferior paffions, that the moft painful feelings are excited in the mind when the latter are croffed: thus in the moral fyftem, which we have

\* The air at this time being ferene, and not a cloud to be feen, I faw this annual almost total autumnal eclipse in its highest degree of perfection. planned

planned for our conduct, as a ladder whereby to mount to the fummit of terrestrial glory and happinefs, and from whence we perhaps meditated our flight to heaven itfelf, at the very moment when we vainly imagine ourfelves to have attained its point, fome unforefeen accident intervenes, and furprifes us; the chain is violently fhaken, we quit our hold and fall: the well contrived fystem at once becomes a chaos; every idea of happiness recedes; the fplendour of glory darkens, and at length totally difap. pears; every pleafing object is defaced, all is deranged, and the flattering fcene paffes quite away; a gloomy cloud pervades the understanding, and when we fee our progrefs retarded, and our best intentions frustrated, we are apt to deviate from the admonitions and convictions of virtue, to fhut our eyes upon our guide and protector, doubt of his power, and defpair of his affiftance. But let us wait and rely on our God, who in due time will fhine forth in brightness, diffipate the envious cloud, and reveal to us how finite and circumfcribed is human. power, when affuming to itfelf independent wildom.

But, before I leave the river Alatamaha, we will proceed to give a further and more particular account of it. It has its fource in the Cherokee mountains, near the head of Tugilo, the great west branch of Savanna, and, before it leaves them, is joined and augmented by innumerable rivulets; thence it defcends through 'the hilly country, with all its collateral branches, and winds rapidity amongst the hills two hundred and fifty miles, and then enters the flat plain country, by the name of the Oakmulge; thence meandering an hundred and fifty miles, it is joined on the east fide by the Ocone, which likewife heads in the lower ridges of the mountains. After this confluence, E 2 having

having now gained a vaft acquifition of waters, it affumes the name of Alatamaha, "when it becomes a large majeftic river, flowing with gentle windings through a vaft plain foreft, near an hundred miles, and enters the Atlantic by feveral mouths. The north channel, or entrance, glides by the heights of Darien, on the east bank, about ten miles above the bar, and running from thence with feveral turnings, enters the ocean between Sapello and Wolf islands. The fouth channel, which is efteemed the largest and deepest, after its separation from the north, defcends gently, winding by M'Intofh's and Broughton islands; and laftly, by the west coast of St. Simon's island, enters the ocean, through St. Simon's found, between the fouth end of the island of that name and the north end of Jekyl island. On the west banks of the fouth channel, ten or twelve miles above its mouth, and nearly opposite Darien, are to be feen the remains of an ancient fort, or fortification; it is now a regular tetragon terrace, about four feet high, with baftions at each angle; the area may contain about an acre of ground, but the foffe which furrounded it is nearly filled up. There are large Live Oak, Pines, and other trees, growing upon it, and in the old fields adjoining. It is fuppofed to have been the work of the French or Spaniards. A large fwamp lies betwixt it and the river, and a confiderable creek runs close by the works, and enters the river through the fwamp, a small diftance above Broughton island. About feventy or eighty miles above the confluence of the Oakmulge and Ocone, the trading path, from Augusta to the Creek nation, croffes thefe fine rivers, which are there forty miles apart. On the east banks of the Oak, mulge, this trading road runs nearly two miles through

### NORTH AMERICA.

through ancient Indian fields, which are called the Oakmulge fields: they are the rich low lands of the river. On the heights of thefe low grounds are yet vifible monuments, or traces, of an ancient town, fuch as artificial mounts or terraces, fquares and banks, encircling confiderable areas. Their old fields and planting land extend up and down the river, fifteen or twenty miles from this fite.

If we are to give credit to the account the Creeks give of themfelves, this place is remarkable for being the first town or fettlement, when they fat down (as they term it) or established themselves, after their emigration from the west, beyond the Miffifippi, their original native country. On this long journey they fuffered great and innumerable difficulties, encountering and vanquishing numerous and valiant tribes of Indians, who opposed and retarded their march. Having croffed the river, ftill pushing eastward, they were obliged to make a ftand, and fortify themfelves in this place, as their only remaining hope, being to the laft degree perfecuted and weakened by their furrounding foes. Having formed for themfelves this retreat, and driven off the inhabitants by degrees, they recovered their fpirits, and again faced their enemies, when they came off victorious in a memorable and decifive bat-They afterwards gradually fubdued their furtle. rounding enemies, ftrengthening themfelves by taking into confederacy the vanquished tribes.

And they fay, alfo, that about this period the Englifh were eftablifhing the colony of Carolina; and the Creeks, underftanding that they were a powerful, warlike people, fent deputies to Charlefton, their capital, offering them their friendfhip and alliance, which was accepted, and, in confequence thereof.

54

thereof, a treaty took place between them, which has remained inviolable to this day. They never ceafed war against the numerous and potent band of Indians, who then furrounded and cramped the English plantations, as the Savannas, Ogeeches, Wapoos, Santees, Yamafees, Utinas, Icofans, Paticas, and others, until they had extirpated them. The Yamafees and their adherents fheltering themfelves under the power and protection of the Spaniniards of East Florida, they purfued them to the very gates of St. Augustine; and the Spaniards reofusing to deliver them up, these faithful intrepid allies had the courage to declare war against them, and inceffantly perfecuted them, until they entirely. broke up and ruined their fettlements, driving them before them, till at length they were obliged to retire within the walls of St. Augustine and a few inferior fortified poits on the fea coaft.

After a few days I returned to Broughton illand. The Cherokees and their confederates being yet difcontented, and on bad terms with the white people, it was unfafe to purfue my travels in the north weftern regions of Carolina. And recollecting many fubjects of natural hiftory, which I had observed in the fouth of the ifthmus of Florida, when on a journey fome years ago with my father, John Bartram, that were interefting, and not taken notice of by any traveller; and as it was then in the autumn and winter, having reafon to think that very many curious fubjects had escaped our refearches; I now formed the refolution of travelling into East Florida; accordingly, I immediately wrote to doctor Fothergill, in order that he might know where to direct to me.

# PART II.

### CHAP. I.

We are, all of us, fubject to croffes and difappointments, but more effectively the traveller; and when they furprife us, we frequently become reftlefs and impatient under them; but let us rely on Providence, and by fludying and contemplating the works and power of the Creator, learn wifdom and underftanding in the economy of nature, and be ferioufly attentive to the divine monitor within. Let us be obedient to the ruling powers in fuch things as regard human affairs, our duties to each other, and all creatures and concerns that are fubmitted to our care and controul.

In the month of March, 1774, I fet off from Savanna, for Florida, proceeding by land to the Alatamaha, where I diverted my time agreeably in thort excursions, picking up curiofities, until the arrival of a fmall veffel at Frederica, from Savanna, which was defined to an Indian trading house high up St. John's, in East Florida. Upon information. of this veffel's arrival, I immediately took boat and descended the Alatamaha, calling by the way of Broughton island, where I was kindly received by Mr. James Bailey, Mr. Laurens's agent. Leaving Broughton island in the evening, I continued defcending the fouth channel nine or ten miles, when, after croffing the found, I arrived at Frederica, on the illand of St. Simon, where I was well received. and entertained by James Spalding, efq. This gentleman

tleman carrying on a very confiderable trade, and having extensive connections with the Indian tribes of East Florida, gave me letters to his agents refiding at his trading houses, ordering them to furnish me with horses, guides, and every other convenient assistance.

Before the veffel was ready to fail again for St. John's, I had time to explore the island. In the cool of the morning early, I rode out of the town, directing my courfe to the fouth end of the island. After penetrating a thick grove of oaks, which almost furrounded the town on the land-fide, fuddenly a very extensive and beautiful green favanna opened to view, in length nearly two miles, and in breadth near a mile, well flocked with horned cattle, horfes, fheep, and deer. Following an old highway, now out of repair, acrofs the Savanna, I afcended the floping green bank, and entered a noble forest of lofty pines, and then a venerable grove of Live Oaks, under whofe fhady fpreading boughs opened a fpacious avenue, leading to the former feat of general Oglethorpe, but now the property of capt. Raimond Demere. After leaving this town I was led into a high pine foreft; the trees were tall, and generally of the fpecies called Broom-pine (P. palustris Linn.) the furface of the ground covered with grafs, herbage, and fome fhrubbery: I continued through this foreft nearly in a direct line towards the fea-coaft, five or fix miles, when the land became uneven, with ridges of fand-hills, mixed with fea-fhells, and co-vered by almost impenetrable thickets, confisting of Live Oaks, Sweet-bay (L. Borbonia), Myrica, Ilex aquifolium, Rhamnus frangula, Caffine, Sideroxylon, Ptelea, Halefia, Callicarpa, Carpinus, entangled with Smilax pfeudo-china, and other fpecies,

### NORTH AMERICA.

fpecies, Bignonia fempervirens, B. crucigera, Rhamnus volubilis, &c. This dark labyrinth is fucceeded by a great extent of falt plains, beyond which the boundless ocean is seen. Betwixt the dark forest and the falt plains, I croffed a rivulet of fresh water, where I fat down a while to reft myfelf, under the shadow of fweet Bays and Oaks; the lively breezes were perfumed by the fragrant breath of the fuperb Crinum, called by the inhabitants, White This admirable beauty of the fea-coaft-Lily. islands dwells in the humid shady groves, where the foil is made fertile and mellow by the admixture of fea shells. The delicate structure of its spadix, its green broad leaves, and the texture and whitenefs of its flowers, at once charmed me. The Euphorbia picta, Salvia coccinea, and Ipomea erecta. were alfo feated in front of my refting place, as well as the Lycium falfum (perhaps L. Afrum Linn.) a very beautiful ever-green shrub, its cerulean flowers, and coral red berries, always on its branches, forming not the least of its beauties.

Time now admonishing me to rife and be going, I, with reluctance, broke away from this affembly of maritime beauties.

Continuing on, fouthward, the falt plains on my left hand infenfibly became narrower, and I at length reached the ftrand, which was level, firm, and paved with fhells, and afforded me a grand view of the boundlefs ocean.

O thou Creator fupreme, almighty! how infinite and incomprehenfible thy works! most perfect, and every way aftonishing!

I continued nearly a mile along this firm fandy beach, the waves of the fea fometimes washing my horfe's

horfe's feet. I obferved a great variety of shellfish, as Echinitis, Corallinus, Patella, Medusa, Buccina, Concha venerea, Auris marina, Cancer, Squilla, &c. fome alive, and others dead, having been caft upon the beach by the feas, in times of tempest, where they became a prey to fea fowl, and other maritime animals, or perifhed by the heat of the fun and burning fands. At length I doubled the utmost fouth point of St. Simon's, which forms the north cape of the fouth channel of the great river Alatamaha. The found, just within this cape, forms an excellent bay, or cove, on the fouth end of the island, on the opposite fide of which I beheld a houfe and farm, where I foon arrived. This delightful habitation was fituated in the midft of a fpacious grove of Live Oaks and Palms, near the ftrand of the bay, commanding a view of the inlet. A cool area furrounded the low but convenient buildings, from whence, through the groves, was a fpacious avenue into the island, terminated by a large favanna; each fide of the avenue was lined with bee-hives, to the number of fifty or fixty; they feemed to be well peopled, and exhibited a lively image of a colony that has attained to a flate of power and affluence, by the practice of virtue and industry.

When I approached the houfe, the good man, who was reclining on a bear-fkin, fpread under the fhade of a Live Oak, fmoking his pipe, rofe and faluted me: "Welcome, ftranger, I am indulging the rational dictates of nature, taking a little reft, having just come in from the chace and fifhing." After fome conversation and reft, his fervant brought a bowl of honey and water, a very refreshing and agreeable liquor, of which I drank. On rifing to take my departure, he objected, and requested

requested me to ftay and dine with him; and on my pleading, for excufe, the neceffity of my being at Frederica, "Yet, I pray you, ftay a little, I will foon have fome refreshment for you." Prefently was laid before us a plentiful repait of venifon, &c.; our drink being honey and water, ftrengthened by the addition of brandy. Our rural table was fpread under the fhadow of Oaks, Palms, and Sweet Bays, fanned by the lively falubrious breezes wafted from the fpicy groves. Our mufic was the refponfive love-lays of the painted nonpareil, and the alert and gay mock-bird; whilft the brilliant hummingbird darted through the flowery groves, sufpended in air, and drank nectar from the flowers of the yellow Jafmine, Lonicera, Andromeda, and fweet Azalea.

But yet, how awfully great and fublime is the majeftic fcene eaftward! the folemn found of the beating furf ftrikes our ears; the dashing of yon liquid mountains, like mighty giants, in vain affail the sites; they are beaten back, and fall prostrate upon the soft the trembling island.

Taking leave of my fylvan friend, I fat off on my return to the town, where I arrived before night, having obferved, on the way, many curious vegetable productions, particularly Corypha Palma (or great Cabbage Palm) Corypha pumila, Corypha repens, frondibus expansis, flabelliformibus, plicatis, ftipit. fpinofis (Dwarf Saw Palmetto) Corypha obliqua, caudice arboreo adfcendente, frondibus expansis, flabelliformibus, plicatis, ftipit. ferratis, Cyrilla, Tillandfia monostachya, Till. lingulata, or Wild Pine; both these curious vegetables are parafites, living on the fubstance of others, particularly on the limbs of the Live Oak; the latter fpecies

cies is a very large flourishing plant, greatly refembling, at fome diftance, a well grown plant of the Bromelia Ananas: the large deep green leaves are placed in an imbricated order, and afcendant; but their extremities are reflex, their bafes gibbous and hollowed, like a ladle, and capable of containing near a pint of water: heavy tempefts of wind and rain tear these plants from the trees; yet they live and flourish on the earth, under the shadow of these great Live Oaks. A very large part of this island had formerly been cleared and planted by the English, as appeared evidently to me, by veftiges of plantations, ruins of coftly buildings, highways, &c. but it is now overgrown with forefts. Frederica was the first town built by the English in Georgia, and 'was founded by general Oglethorpe, who began and established the colony. The fortrefs was regular and beautiful, conftructed chiefly with brick, and was the largeft, most regular, and perhaps most costly, of any in North America, of British construction : it is now in ruins, yet occupied by a fmall garrifon; the ruins also of the town only remain; peach trees, figs, pomegranates, and other fhrubs, grow out of the ruinous walls of former fpacious and expensive buildings, not only in the town, but at a diftance in various parts of the island; yet there are a few neat houses in good repair, and inhabited : it feems now recovering again, owing to the public and liberal fpirit and exertions of J. Spalding, efq. who is prefident of the island, and engaged in very extensive mercantile concerns.

## CHAP. II.

THE veffel in which I was to embark for East Florida, being now ready to purfue her voyage, we fet fail with a fair wind and tide. Our course was fouth, through the found, betwixt a chain of feacoast-islands, and the main. In the evening we came to, at the fouth end of St. Simon's, having been hindered by the flood tide making against us. The captain and myfelf, with one of our crew, went on fhore, with a view of getting fome venifon and fea fowl. We had not the good fortune to fee any deer, yet we were not altogether unfuccefsful, having taken three young racoons (Urfus cauda elongata) which are excellent meat : we had them for fupper, ferved up in a pillo. Next morning early, we again got under way, running by Jekyl and Cumberland Islands, large, beautiful, and fertile, yet thinly inhabited, and confequently excellent haunts for deer, bears, and other game.

As we ran by Cumberland Ifle, keeping the channel through the found, we faw a fail a head coming up towards us. Our captain knew it to be the trading fchconer from the ftores on St. John's, and immediately predicted bad news, as fhe was not to fail until our arrival there. As fhe approached us, his apprehenfions were more and more confirmed, from the appearance of a number of paffengers on deck. We laid to, until fhe came up, when we hailed her, "What news?" "Bad; the Indians have plundered the upper ftore, and the traders have efcaped, only with their lives." Upon this both veffels came to anchor very near each other, when learning learning the particulars, it appeared, that a large party of Indians had furprifed and plundered two trading houfes, in the ifthmus, beyond the river St. John's; and a third being timely apprifed of their hoftile intentions, by a faithful runner, had time to carry off part of the effects, which they fecreted in a fwamp at fome diftance from it, covering them with fkins. The upper ftore had faved their goods in like manner; and the lower ftore to which we were bound, had removed the chief of theirs, and deposited them on a small island, in the river, about five miles below the ftore. With these effects was my cheft, which I had forwarded in this veffel, from Savanna, not being at that time determined whether to make this journey by land, or water. The captain of our veffel, refolved to put about and return to Frederica, for fresh instructions how to proceed; but for my part, I was determined to proceed for the ifland up St. John's, where my cheft was lodged, there being fome valuable books and papers in it, which I could not do well without. I accordingly defired our captain to put me on shore, on Little St. Simon's, which was not far diftant, intending to walk a few miles to a fort, at the fouth end of that illand, where fome fifhermen refided, who, as I expected, would fet me over on Amelia Island, where was a large plantation, the property of Lord Egmont, a British nobleman, whose agent, while I was at Frederica, gave me an invitation to call on him, as I paffed toward Eaft Florida; and here I had expectations of getting a boat to carry me to St. John's. Agreeably to my defire, the captain put me on fhore, with a young man, a paffenger, for East Florida, who promifed to continue with me, and fhare my adventures. We landed fafely; the captain withing us a profperous journey, returned on board

board his veffel, and we proceeded for the fort, encountering fome harfh treatment from thorny thickets, and prickly vines. However we reached the fort in the evening. The commander was out in the forest, hunting. My companion being tired, or indolent, betook himfelf to reft, while I made a tour round the fouth point of the ifland, walking the fhelly paved fea beach, and picking up novelties. had not gone above a mile before I came up to a roebuck, lying flain on the fands; and hearing the report of a gun, not far off, and fuppoling it to be from the captain of the fort, whom I expected foon to return to take up his game, I retired to a little diftance, mounted the fand hills, and fat down, enjoying a fine profpect of the rolling billows and foaming breakers, beating on the oar, and north promontory of Amelia Isle, opposite to me.' The captain of the fort foon came up, with a flain buck on his shoulders. We hailed each other, and returned together to the fort, where we were well treated, and next morning, at my request, the captain obligingly fet us over, landing us fafely on Amelia. After walking through a fpacious forest of Live Oaks and Palms, and croffing a creek that ran through a narrow falt marsh, I and my fellow traveller arrived fafe at the plantation, where the agent, Mr. Egan, received us very politely and hofpitably. This gentleman is a very intelligent and able planter, having already greatly improved the eftate, particularly in the cultivation of indigo. Great part of this island confifts of excellent hommocky land, which is the foil this plant delights in, as well as cotton, corn, batatas, and almost every other efculent vegetable. Mr. Egan politely rode with me over great part of the island. On Egmont Egmont effate are feveral very large Indian tumuli, which are called Ogeeche mounts, fo named from that nation of Indians, who took fhelter here, after being driven from their native fettlements on the main near Ogeeche river. Here they were conftantly harrafied by the Carolinians and Creeks, and at length flain by their conquerors, and their bones entombed in these heaps of earth and fhells. I obferved here the ravages of the common grey caterpillar (Phalena periodica), fo deftructive to forest and fruit trees, in Pennfylvania, and through the northern states, by ftripping them of their leaves, in the fpring, while young and tender.

Mr. Egan having bufinefs of importance to tranfact in St. Augustine, prefied me to continue with him a few days, when he would accompany me to that place, and, if I chose, I should have a passage, as far as the Cow-ford, on St. John's, where he would procure me a boat to profecute my voyage.

It may be a fubject worthy of fome inquiry, why those fine islands, on the coast of Georgia, are fo thinly inhabited; though perhaps Amelia may in fome degree plead an exemption, as it is a very fertile island, on the north border of East Florida, and at the Capes of St. Mary, the fineft harbour in this new colony. If I fhould give my opinion, the following feem to be the most probable reasons: the greatest part of these are as yet the property of a few wealthy planters, who having their refidence on the continent, where lands on the large rivers, as Savanna, Ogeeche, Alatamaha, St. Ille, and others, are of a nature and quality adapted to the growth of rice, which the planters chiefly rely upon for obtaining ready cash, and purchasing family articles; they fettle a few poor families on their infular

fular eftates, who rear ftocks of horned cattle, horfes, fwine, and poultry, and protect the game for their proprietors. The inhabitants of these islands alfo lie open to the invasion and ravages of pirates, and in case of a war, to incursions from their enemies' armed vessels; in which case they must either remove with their families and effects to the main, or be stripped of all their moveables, and their houses laid in ruins.

The foil of these islands appears to be particularly favourable to the culture of indigo and cotton, and there are on them fome few large plantations for the cultivation and manufacture of those valuable articles. The cotton is planted only by the poorer clafs of people, just enough for their family confumption : they plant two species of it, the annual and West Indian; the former is low, and planted every year; the balls of this are very large, and the phlox long, ftrong, and perfectly white; the Weft Indian is a tall perennial plant, the ftalk fomewhat shrubby, feveral of which rife up from the root for feveral years fucceflively, the ftems of the former year being killed by the winter frofts. The balls of this latter fpecies are not quite fo large as those of the herbaceous cotton; but the phlox, or wool, is long, extremely fine, filky, and white. A plantation of this kind will last feveral years, with moderate labour and care, whereas the annual fort is planted every year.

The coafts, founds, and inlets, environing these islands, abound with a variety of excellent fifh, particularly Rock, Bafs, Drum, Mullet, Sheeps-head, Whiting, Grooper, Flounder, Sea Trout, (this laft feems to be a fpecies of Cod) Skate, Skipjack, Stingray. The Shark, and great Black Stingray, F

are infatiable cannibals, and very troublefome to the fifhermen. The bays and lagoons are flored with oyfters, and varieties of other fhell-fifh, crabs, fhrimp, &c. The clams, in particular, are large, their meat white, tender, and delicate.

There is a large fpace betwixt this chain of feacoaft-iflands and the main land, perhaps generally near three leagues in breadth; but all this fpace is not covered with water : I effimate nearly two-thirds of it to confift of low falt plains, which produce Barilla, Sedge, Rushes, &c. and which border on the main land, and the western coasts of the islands. The east fides of these islands are, for the most part, clean, hard, fandy beaches, exposed to the wash of the ocean. Between these islands are the mouths or entrances of fome rivers, which run down from the continent, winding about through thefe low falt marshes, and delivering their waters into the founds, which are very extensive capacious harbours, from three to five and fix to eight miles over, and communicate with each other by parallel falt rivers, or paffes, that flow into the found; they afford an extenfive and fecure inland navigation for most craft, fuch as large schooners, floops, pettiaugers, boats, and canoes; and this inland communication of waters extend along the fea coaft with but few and fhort interruptions, from the bay of Chefapeak, in Virginia to the Miffifippi, and how much farther I know not, perhaps as far as Vera Cruz. Whether this chain of fea-coast-islands is a step, or advance, which this part of our continent is now making on the Atlantic ocean, we must leave to future ages to determine. But it feems evident, even to demonftration, that those falt marshes adjoining the coast of the main, and the reedy and graffy illands and marshes

marfhes in the rivers, which are now overflowed at every tide, were formerly high fwamps of firm land, affording forefts of Cyprefs, Tupilo, Magnolia grandiflora, Oak, Afh, Sweet Bay, and other timber trees, the fame as are now growing on the river fwamps, whofe furface is two feet or more above the fpring tides that flow at this day; and it is plainly to be feen by every planter along the coaft of Carolina, Georgia, and Florida, to the Miffifippi, when they bank in thefe graffy tide marfhes for cultivation, that they cannot fink their drains above three or four feet below the furface, before they come to ftrata of Cyprefs flumps and other trees, as clofe together as they now grow in the fwamps.

F 2

CHAP.

# CHAP. III.

BEING now in readinefs to profecute our voyage to St. John's, we fet fail in a handfome pleafureboat, manned with four flour negro flaves, to row in cafe of neceffity. After paffing Amelia Narrows, we had a pleafant run across fort George's found, where, observing the pelicans fishing, Mr. Egan fhot one of them, which he took into the boat. I was greatly furprifed on obferving the pouch or fack, which hangs under the bill: it is capable of being expanded to a prodigious fize. One of the people on board, faid, that he had feen more than half a bushel of bran crammed into one of their pouches. The body is larger than that of a tame goofe, the legs extremely fhort, the feet webbed, the bill of a great length, bent inwards like a fcythe, the wings extend near feven feet from tip to tip, the tail is very fhort, the head, neck, and breaft, nearly white, the body of a light bluifh gray, except the quill feathers of the wings, which are black. They feem to be of the gull kind, both in form and structure, as well as manner of fishing. The evening following, we landed on the main. It was a promontory of high land, covered with orange-trees, and projecting into the found, forming a convenient port. We pitched our tent under the shelter of a forest of Live Oaks, Palms, and Sweet Bays; and having in the course of the day, procured plenty of fea fowl, fuch as curlews, willets, fnipes, fand birds, and others; we had them dreffed for fupper, and feafoned with excellent oyfters, which lay in heaps in the water, close to our landing-place. The

The fhrub Capficum growing here in abundance, afforded us a very good pepper : we drank of a well of fresh water just at hand, amidst a grove of Myrtles (Myrica cerifera.) Our repose however was incomplete, from the flings of mulquetoes, the roaring of crocodiles, and the continual noife and reftleffnefs of the fea fowl, thoufands of them having their roofting-places very near us, particularly loons of various species, herons, pelicans, Spanish curlews &c. all promifcuoufly lodging together, and in fuch incredible numbers, that the trees were entirely co-They rooft in inacceffible iflets in the falt vered. marshes, furrounded by lagoons, and shallow water. Just without the trees, betwixt them, the water and marshes, is a barricade of Palmetto royal (Yucca, gloriofa) or Adam's needle, which grows fo thick together, that a rat or bird can fcarcely pais through them; and the ftiff leaves of this fword plant, ftanding nearly horizontally, are as impenetrable to man, or any other animal, as if they were a regiment of grenadiers with their bayonets pointed at you. The Palmetto royal is, however, a very fingular and beautiful production. It may be termed a tree, from its durability and magnitude, as likewife from the ligneous quality of its ftem, or trunk, when old; yet from its form and texture, I fhould be inclined to rank it amongst the herbaceous plants, for even the glorious palm, although it rifes to the altitude of a tree, and even transcends most of them, yet it bears the character of the herbaceous ones: and this, like the Palm tree, rifes with a ftraight, erect ftem, about ten or twelve feet high, crowned with a beautiful chaplet of fword or dagger like leaves, of a perfect green colour, each terminated with a fliff, fharp fpur, and their edges finely crenated. This thorny crown is crefted with a pyramid of filver

70

ver white flowers, each refembling a tulip or lily. Thefe flowers are fucceeded by a large fruit, nearly of the form and fize of a flender cucumber, which when ripe, is of a deep purple colour, the fkin fmooth and fhining, its pulp foft, very juicy, and of an agreeable aromatic flavour, but rather bitter to the tafte; it is, however, frequently eaten, but if eaten to excefs, proves violently purgative. The feeds are numerous, flat, and lunated.

The plant, or tree, when grown old, fometimes divides into two or three stems, which seem of equal height and thickness, and indeed nearly of the fame thicknefs with the main ftem; but generally, when they arrive to this age and magnitude, their own weight brings them to the ground, where they foon decay, the heart or pith first, leaving a hollow fibrous reticulated trunk or fleeve, which likewife foon after decays, and in fine, all is again reduced to its original earth, and replaces the vegetative mould. But the deceafed are foon replaced by others, as there are younger ones of all ages and stature, ready to fucceed their predeceffors, and flourish for a time, with the fame regal pomp and fplendor. These plants are fo multitudinous, whereever they get a footing, that the earth is completely occupied by them, and fcarcely any other vegetable is to be feen, where they are; yet they are fometimes fcattered amongst other trees and vegetables.

In three days after leaving Amelia, we arrived at the Cow-ford, a public ferry, over St. John's, about thirty miles above the bar or capes, the river here being above a mile wide.

'Mr. Egan, after procuring a neat little fail-boat for me, at a large indigo plantation near the ferry,

and

and for which I paid three guineas, departed for St. Augustine, which is on the fea-coast, about fortyfive miles over land.

It was now about the middle of April. Vegetation appearing every where in high progrefs, I was anxious to be advancing foutherly; and having at this plantation ftored myfelf with neceffaries for my voyage, I failed in the morning, with a fair I was now again alone, for the young man, wind. my fellow traveller, though flouter and heartier than myfelf, having repented of his promife to accompany me to the Indian trading houses, I fuppofe not relifhing the hardfhips and dangers, which might perhaps befal us, chose rather to stay behind, amongst the fettlements. His leaving me, however, I did not greatly regret, as I could not confider it a difappointment much to my difadvantage at the moment. Our views were probably totally oppofite; he, a young mechanic on his adventures, feemed to be actuated by no other motives, than either to eftablish himself in some well inhabited part of the country, where, by following his occupation, he might be enabled to procure, without much toil and danger, the neceffaries and conveniencies of life; or by industry and frugality, perhaps establish his fortune. Whift I, continually impelled by a reftlefs fpirit of curiofity, in purfuit of new productions of nature, my chief happiness confisted in tracing and admiring the infinite power, majefty, and perfection of the great Almighty Creator, and in the contemplation, that through divine aid and permiffion, I might be inftrumental in difcovering, and introducing into my native country, fome original productions of nature, which might become ufeful

71

to

72

to fociety. Each of our purfuits was perhaps equally laudable; and upon this fupposition, I was quite willing to part with him upon amicable terms.

My little veffel being furnished with a good fail, and having fishing tackle, a neat light fusee, powder and ball, I found myself well equipped for my voyage, about one hundred miles to the tradinghouse.

I croffed the river to a high promontory of wood-land, on the welt fhore, and being ftruck with the magnificence of a venerable grove of Live Oak, Palms, and Laurel (Magnolia grandiflora) I ftepped on fhore to take a view of the place. Orange trees were in full bloom, and filled the air with fragrance.

It was now paft noon, and this place being about eight miles above the Cow-ford, and the river near three miles in breadth, I wanted to reach a plantation in fight, on the opposite fhore, in order to get fome repairs, my vefiel having fultained fome damage from the violence of the wind, in croffing over. I arrived late in the evening, and finding a convenient landing-place and harbour, I concluded to remain here till morning, and then coast it close along fhore to the plantation.

It beginning to thunder, I was fufficiently warned to prepare against a wet night; and observing a very large Oak tree, which had been thrown down by a hurricane, and offered me a convenient shelter, as its enormous limbs bore up the trunk a fufficient height from the earth to admit me to fit or lie down under it, I spread my fail, flanting from the trunk of the tree to the ground, on the windward windward fide; and having collected a quantity of wood, fufficient to keep up a fire during the night, I ftruck one up in front, and fpreading fkins on the ground, and upon thefe placing a blanket, one half I lay down upon, turning the other over me for a covering.

The ftorm came up, with a furious wind and tremendous thunder and lightning, from the oppofite N. W. coaft, but luckily for me, little rain fell, and I refted very well. But as the wind next morning blew very fresh, right in upon the shore, there was no poffibility of moving, with fafety, from my prefent fituation. I however arole to reconnoitre the ground round about my habitation, being roufed by the report of a mufket not far off. I had not left fight of my encampment, following a winding path through a grove of Live Oak, Laurel (Magn. grandiflora) and Sapindus, before an Indian stepped out of a thicket, and croffed the path just before me, having a large turkey cock flung across his fhoulders: he faw me, and stepping up and smiling, spoke to me in Englifh, bidding me good morning. I faluted him with "It's well, brother," led him to my camp, and treated him with a dram. This friendly Indian informed me that he lived at the next plantation, employed as a hunter. I asked him how far it was to the house; he answered about half a mile by land, and invited me to go there, telling me that his mafter was a very good, kind man, and would be glad to fee me. I replied, that I would, if my boat and effects in the mean time could be fafe. He faid that he would immediately return to the houfe, and acquaint his mafter with it, who would fend trufty negroes to bring my veffel round the

the point, to the landing. I thanked him for his civility, and not willing to be troublefome, I told him I would leave my boat, and follow after him; fo taking my fufee on my fhoulder, after dragging my bark as high up on fhore as I could, I followed the Indian, and foon reached the houfe.

The gentleman received me in the most polite manner; and, after hearing my fituation, he requested me to make my abode with him a few days, to rest and refresh myself. I thanked him, and told him I would stay a day. He immediately sent flaves who brought my boat round; and having carpenters at work on a new building, he fat them about repairing my vessel, which by night was completely restited.

I fpent the day in the most agreeable manner, in the fociety of this man of fingular worth. He led me over his extensive improvements, and we returned in company with feveral of his neighbours, In the afternoon, the most fultry time of the day, we retired to the fragrant shades of an orange grove. The houfe was fituated on an eminence, about one hundred and fifty yards from the river. On the right hand was the orangery, confifting of many hundred trees, natives of the place, and left standing, when the ground about it was cleared. These trees were large, flourishing, and in perfect bloom, and loaded with their ripe golden fruit. On the other fide was a fpacious garden, occupying a regular flope of ground, down to the water; and a pleafant lawn lay between. Here were large plantations of the Indigo plant, which appeared in a very thriving condition : it was then about five or fix inches high, growing in strait parallel rows, about eighteen inches apart. The Corn Corn (Zea) and Potatoes (Convolv. Batata) were greatly advanced in growth, and promifed a plentiful crop. The Indigo made in East Florida is efteemed almost equal to the best Spanish, especially that fort, which they call Flora. Mr. Marschall prefented me with a specimen of his own manufacture, at this plantation : it was very little, if any, inferior to the best Pruffian blue.

In the morning following, intimating my intentions of proceeding on my voyage, Mr. Marshall again importuned me to ftay; but I obtained his confent to depart, on my promising to visit him at my return to Georgia. After breakfast I therefore took my leave, attended to the shore by feveral flaves, loaded with ammunition and provisions, which my friend had provided for me. On my expressing fome difficulty in receiving fo large a share of his bounty, he civilly replied, that it was too little to mention, and that, if I had continued with him a day or two longer, he should have had time to have ferved me in a much better manner.

Taking my leave of Mr. Marshall, I again embarked alone on board my little veffel, and bleffed with a favourable steady gale, I fet fail. The day was extremely pleafant; the late thunder storm had purified the air, by difuniting and diffipating the noxious vapours. The falling of heavy showers, with thunder and brisk winds, from the cool regions of the N. W. contributes greatly towards restoring the falubrity of the air, and purity of the waters, by precipitating the putrescent scum, that rifes from the bottom, and floats upon the furface, near the shores of the rivers, in these fouthern climates, during the hot feasons. The shores thores of this great river St. Juan are very level and thoal, extending, in fome places, a mile or two into the river, betwixt the high land and the clear waters of the river, which is to level, as to be covered not above a foot or two deep with water, and at a little diffance appears as a green meadow, having water-grafs and other amphibious vegetables growing in the oozy bottom, and floating upon the water.

Having a lively leading breeze, I kept as near the East fhore as possible, often furprised by the plunging of alligators, and greatly delighted with the pleasing prospect of cultivation, and the increase of human industry, which frequently struck my view from the elevated, distant shores.

At night I ran in fhore, at a convenient harbour, where I was received and welcomed by the gentleman, who was agent for the plantation, and at whofe pleafant habitation, near the harbour, I took up my quarters for the night.

This very civil man happened to be a perfon with whom I had formerly been acquainted in St. Augustine; and as he lived about twenty miles diftant from it, I had good reason to expect that he would be a proper perfon to obtain intelligence from, concerning the difturbances which were thought fill to fubfift, between the Lower Creeks and the white inhabitants of East Florida. Upon inquiry, and conversation with him, I found my conjectures on that head to have been well founded. My friend informed me, that there had, but a few days fince, been a council held at St. Augustine, between the governor of East Florida and the chiefs of the Lower Creeks, They had been delegated by their towns,

towns, to make inquiry concerning the late alarm and depredations committed by the Indians upon the traders; which the nation being apprifed of, recommended thefe deputies to be chofen and fent, as foon as poffible, in order to make reafonable conceffions, before the flame, already kindled, fhould fpread into a general war. The parties accordingly met in St. Augustine, and the affair was amicably adjusted, to the fatisfaction of both parties. The chiefs of the delinquent bands, whole young warriors had committed the mifchief, promifed to indemnify the traders for the lofs of their goods, and requefted that they might return to their ftorehoufes, with goods as ufual, and that they should be fafe in their perfons and property. The traders at this time were actually preparing to return. It appeared, upon a strict investigation of facts, that the affair had taken its rife from the licentious conduct of a few vagrant young hunters of the Siminole nation, who, imagining themfelves to have been ill treated in their dealings with the traders (which by the bye was likely enough to be true) took this violent method of doing themfelves juffice. The culprits however endeavoured to exculpate themfelves, by afferting, that they had no defign or intention of robbing the traders of their effects, but meant it only as a threat; and that the traders, from a confciousness of their dishonesty, had been terrified and fled, leaving their ftores, which they took poffession of, to prevent their being totally loft. This troublefome affair being adjusted, was very agreeable news to me, as I could now, without apprehenfions, afcend this grand river, and vifit its delightful fhores, where and when I pleafed.

Bidding adieu to my obliging friend, I fpread my fail to the favourable breeze, and by noon came to a-breaft a-breaft of fort Picolata; where, being defirous of gaining yet farther intelligence, I landed; but, to my difappointment, found the fort difmantled and deferted. This fortrefs is very ancient, and was built by the Spaniards. It is a fquare tower, thirty feet high, invefted with a high wall, without baftions, about breaft high, pierced with loop holes and furrounded with a deep ditch. The upper ftory is open on each fide, with battlements, fupporting a cupola or roof: thefe battlements were formerly mounted with eight four pounders, two on each fide.

The works are conftructed with hewn ftone, cemented with lime. The ftone was cut out of quarries on St. Anaftatius Ifland, oppofite St. Auguftine : it is of a pale reddifh brick colour, and a teftaceous composition, confifting of fmall fragments of fea-fhells and fine fand. It is well adapted to the conftructing of fortifications. It lies in horizontal maffes in the quarry, and conflitutes the foundation of that ifland. The caftle at St. Auguftine, and most of the buildings of the town, are of this ftone.

Leaving Picolata, I continued to afcend the river. I obferved this day, during my progrefs up the river, incredible numbers of fmall flying infects, of the genus termed by naturalifts Ephemera, continually emerging from the fhallow water near fhore, fome of them immediately taking their flight to the land, whilft myriads crept up the grafs and herbage, where remaining for a fhort time, as they acquired fufficient ftrength, they took their flight alfo, following their kindred to the main land. This refurrection from the deep, if I may fo express it, commences early in the morning, and ceafes after the fun is up. At evening they are feen in clouds

clouds of innumerable millions, fwarming and wantoning in the ftill air, gradually drawing near the They defcend upon its furface, and there river. quickly end their day, after committing their eggs to the deep; which being for a little while toffed about, enveloped in a viscid fcum, are hatched, and the little Larva defcend into their fecure and dark habitation, in the oozy bed beneath, where they remain, gradually increasing in fize, until the returning fpring : they then change to a Nymph, when the genial heat brings them, as it were, into existence, and they again arife into the world. This fly feems to be delicious food for birds, frogs, and In the morning, when they arife, and in the fifh. evening, when they return, the tumult is great indeed, and the furface of the water along fhore broken into bubbles, or fpirted into the air, by the contending aquatic tribes; and fuch is the avidity of the fifh and frogs, that they fpring into the air after this delicious prey.

Early in the evening, after a pleafant day's voyage, I made a convenient and fafe harbour, in a little lagoon, under an elevated bank, on the Weft fhore of the river; where I thall entreat the reader's patience, whilft we behold the clofing fcene of the fhort-lived Ephemera, and communicate to each other the reflections which fo fingular an exhibition might rationally fuggeft to an inquifitive mind. Our place of obfervation is happily fituated under the protecting fhade of majeftic Live Oaks, glorious Magnolias, and the fragrant Orange, open to the view of the great river and ftill waters of the lagoon juft before us.

At the cool eve's approach, the fweet enchanting melody

melody of the feathered fongsters gradually ceases, and they betake themselves to their leafy coverts for fecurity and repose.

Solemnly and flowly move onward, to the river's flore, the ruftling clouds of the Ephemera. How awful the proceffion ! innumerable millions of winged beings, voluntarily verging on to deftruction, to the brink of the grave, where they behold bands of their enemies with wide open jaws, ready to receive them. But as if infenfible of their danger, gay and tranquil each meets his beloved mate in the ftill air, inimitably bedecked in their new nuptial robes. What eye can trace them, in their varied wanton amorous chaces, bounding and fluttering on the odoriferous air ! With what peace, love, and joy, do they end the laft moments of their exiftence ?

I think we may affert, without any fear of exaggeration, that there are annually of thefe beautiful winged beings, which rife into exiftence, and for a few moments take a transient view of the glory of the Creator's works, a number greater than the whole race of mankind that have ever exifted fince the creation; and that, only from the flores of this river. How many then must have been produced fince the creation, when we confider the number of large rivers in America, in comparison with which, this river is but a brook or rivulet.

The importance of the existence of thefe beautiful and delicately formed little creatures, whofe frame and organization are equally wonderful, more delicate, and perhaps as complicated as those of the most perfect human being, is well worth a few moments contemplation; I mean particularly when when they appear in the fly ftate. And if we confider the very fhort period of that ftage of existence, which we may reasonably suppose to be the only space of their life that admits of pleasure and enjoyment, what a lesson doth it not afford us of the vanity of our own pursuits !

Their whole existence in this world is but one complete year : and at leaft three hundred and fixty days of that time they 'are in the form of an ugly grub, buried in mud, eighteen inches under water. and in this condition fcarcely locomotive, as each Larva or grub has but its own narrow folitary cell, from which it never travels or moves, but in a perpendicular progression of a few inches, up and down, from the bottom to the furface of the mud, in order to intercept the paffing atoms for its food, and get a momentary refpiration of fresh air; and even here it must be perpetually on its guard, in order to escape the troops of fish and shrimps watching to catch it, and from whom it has no escape, but by instantly retreating back into its cell. One would be apt almost to imagine them created merely for the food of fish and other animals.

Having refted very well during the night, I was awakened in the morning early, by the cheering converfe of the wild turkey-cocks (Meleagris occidentalis) faluting each other, from the fun-brightened tops of the lofty Cupreffus difficha and Magnolia grandiflora. They begin at early dawn, and continue till fun rife, from March to the laft of April. The high forefts ring with the noife, like the crowing of the domeftic cock, of thefe focial centinels; the watch-word being caught and repeated, from one to another, for hundreds of miles G around;

around; infomuch that the whole country is for an hour or more in an univerfal fhout. A little after fun-rife, their crowing gradually ceafes, they quit their high lodging places, and alight on the earth, where, expanding their filver bordered train, they ftrut and dance round about the coy female, while the deep forefts feem to tremble with their fhrill noife.

This morning the winds on the great river were high and against me; I was therefore obliged to keep in port a great part of the day, which I employed in little excursions round about my encampment. The Live Oaks are of an aftonishing magnitude, and one tree contains a prodigious quantity of timber ; yet, comparatively, they are not tall, even in these forests, where growing on strong land, in company with others of great altitude (fuch as Fagus fylvatica, Liquidambar, Magnolia grandiflora, and the high Palm tree) they ftrive while young to be upon an equality with their neighbours, and to enjoy the influence of the fun-beams, and of the pure animating air. But the others at last prevail, and their proud heads are feen at a great diffance, towering far above the reft of the forest, which confifts chiefly of this species of oak, Fraxinus, Ulmus, Acer, rubrum, Laurus Borbonia, Quercus dentata, Ilex aquifolium, Olea Americana, Morus, Gleditfia triacanthus, and, I believe, a species of Sapindus. But the latter fpreads abroad his brawny arms, to a great diftance. The trunk of the Live Oak is generally from twelve to eighteen feet in girt, and rifes ten or twelve feet erect from the earth, fome I have feen eighteen or twenty; then divides itself into three, four, or five great limbs, which

which continue to grow in nearly an horizontal direction, each limb forming a gentle curve, or arch, from its bafe to its extremity. I have ftepped above fifty paces, on a ftrait line, from the trunk of one of thefe trees, to the extremity of the limbs. It is evergreen, and the wood almost incorruptible, even in the open air. It bears a prodigious quantity of fruit; the acorn is fmall, but fweet and agreeable to the tafte when reasted, and is food for almost all animals. The Indians obtain from it a fweet oil, which they use in the cooking of hommony, rice, &c.; and they also reast it in hot embers, eating it as we do chefnuts.

The wind being fair in the evening, I fet fail again, and croffing the river, made a good harbour on the Eaft fhore, where I pitched my tent for the night. The bank of the river was about twelve or fifteen feet perpendicular from its furface, but the afcent gentle. Although I arrived here early in the evening, I found fufficient attractions to choofe it for my lodging-place, and an ample field for botanical employment. It was a high, airy fituation, and commanded an extensive and varied prospect of the river and its fhores, up and down.

Behold yon promontory, projecting far into the great river, beyond the ftill lagoon, half a mile diftant from me: what a magnificent grove arifes on its banks! how glorious the Palm! how majeftically ftands the Laurel, its head forming a perfect cone! its dark green foliage feems filvered over with milkwhite flowers. They are fo large, as to be diftinctly vifible at the diftance of a mile or more. The Laurel Magnolias, which grow on this river, are the moft beautiful and tall that I have any where feen, unlefs we except thofe, which ftand on the **G** 2 banks

banks of the Miffifippi ; yet even these must yield to those of St Juan, in neatness of form, beauty of foliage, and, I think, in largeness and fragrance of flower. Their usual height is about one hundred feet, and fome greatly exceed that. The trunk is perfectly erect, rifing in the form of a beautiful column, and fupporting a head like an obtufe cone. The flowers are on the extremities of the fubdivisions of the branches, in the centre of a coronet of dark green, shining, ovate pointed entire leaves: they are large, perfectly white, and expanded like a full blown Rofe. They are polypetalous, confifting of fifteen, twenty, or twenty-five petals: thefe are of a thick coriaceous texture, and deeply concave, their edges being fomewhat reflex, when mature. In the center ftands the young cone; which is large, of a flefh colour, and elegantly fludded with a gold coloured stigma, that by the end of fummer is greatly enlarged, and in the autumn ripens to a large crimfon cone or strobile, disclosing multitudes of large coral red berries, which for a time hang down from them, fuspended by a fine, white, filky thread, four, fix, or even nine inches in length. The flowers of this tree are the largeft and most complete of any yet known : when fully expanded, they are of fix, eight, and nine inches The pericarpium and berries poffefs an diameter. fpicy fcent, and an aromatic bitter agreeable The wood when feafoned is of a ftraw cotafte. lour, compact, and harder and firmer than that of the poplar.

It is really affonishing to behold the Grape-Vines in this place. From their bulk and strength, one would imagine, they were combined to pull down these mighty trees to the earth; when, in fact, amongst

amongst other good purposes, they ferve to uphold them. They are frequently nine, ten, and twelve inches in diameter, and twine round the trunks of the trees, climb to their very tops, and then fpread along their limbs, from tree to tree, throughout the forest: the fruit is but small and ill tasted. The Grape vines, with the Rhamnus volubilis, Bignonia radicans, Bignonia crucigera, and another rambling fhrubby vine, which feems allied to the Rhamnus, perhaps Zizyphus fcandens, feem to tie the trees together with garlands and festoons, and form enchanting fhades. The long mofs, fo called. (Tillandfea ufneaoides), is a fingular and furprifing vegetable production : it grows from the limbs and twigs of all trees in these fouthern regions, from N. lat. 35 down as far as 28, and I believe every where within the tropics. Wherever it fixes itfelf. on a limb, or branch, it fpreads into fhort and intricate divarications; thefe in time collect duft. wafted by the wind, which, probably by the moifture it abforbs, foftens the bark and fappy part of the tree, about the roots of the plant, and renders it more fit for it to establish itself; and from this fmall beginning, it increases, by fending downwards and obliquely, on all fides, long pendant branches, which divide and fubdivide themfelves ad infinitum. It is common to find the fpaces betwixt the limbs of large trees, almost occupied by this plant; it alfo hangs waving in the wind, like ftreamers, from the lower limbs, to the length of fifteen or twenty feet, and of bulk and weight, more than feveral men together could carry; and in fome places, cart loads of it are lying on the ground, torn off by the violence of the wind. Any part of the living plant, torn off and caught in the limbs of a tree, will prefently take root, grow,

grow, and increase, in the fame degree of perfection, as if it had fprung up from the feed. When fresh, cattle and deer will eat it in the winter feafon. It feems particularly adapted to the purpofe of stuffing mattrasses, chairs, faddles, collars, &c.; and for thefe purpofes, nothing yet known equals it. The Spaniards in South America and the Weft-Indies, work it into cables, that are faid to be very ftrong and durable; but, in order to render it ufeful, it ought to be thrown into fhallow ponds of water, and exposed to the fun, where it foon rots, and the outfide furry fubstance is diffolved. It is then taken out of the water, and fpread to dry; when, after a little beating and fhaking, it is fufficiently clean, nothing remaining but the interior, hard, black, elaftic filament, entangled together, and greatly refembling horfe-hair.

The Zanthoxylum clava Herculis alfo grows here. It is a beautiful fpreading tree, and much like a well grown apple tree. Its aromatic berry is delicious food for the little turtle dove; and epicures fay, that it gives their flefh a fine flavour.

Having finished my observations, I betook myself to reft; and when the plunging and roaring of the crocodiles, and the croaking of the frogs, had ceased, I flept very well during the remainder of the night; as a breeze from the river had scattered the clouds of musquitoes that at first infested me.

It being a fine cool morning, and fair wind, I fet fail early, and faw, this day, vaft quantities of the Piftia ftratiotes, a very fingular aquatic plant. It affociates in large communities, or floating iflands, fome of them a quarter of a mile in extent, which are impelled to and fro, as the wind and current may may direct. They are first produced on, or close to the fhore, in eddy water, where they gradually spread themselves into the river, forming most delightful green plains, feveral miles in length, and in fome places a quarter of a mile in breadth. Thefe plants are nourifhed and kept in their proper horizontal fituation, by means of long fibrous roots, which defcend from the nether centre, downwards, towards the muddy bottom. Each plant, when full grown, bears a general refemblance to a well grown plant of garden lettuce, though the leaves are more nervous, of a firmer contexture, and of a full green colour, inclining to yellow. It vegetates on the furface of the fill stagnant water; and in its natural fituation, is propagated from feed only. In great ftorms of wind and rain, when the river is fuddenly raifed, large maffes of thefe floating plains are broken loofe, and driven from the fhores, into the wide water, where they have the appearance of iflets, and float about, until broken to pieces by the winds and waves; or driven again to fhore, on fome diftant coaft of the river, where they again find footing. and there, forming new colonies, fpread and extend themtelves again, until again broken up and difperfed as before. These floating islands prefent a very entertaining prospect; for although we behold an affemblage of the primary productions of natureonly, yet the imagination feems to remain in fufpense and doubt; as in order to enliven the delusion, and form a most picturesque appearance, we see not only flowery plants, clumps of fhrubs, old weatherbeaten trees, hoary and barbed, with the long mofs waving from their fnags, but we also fee them completely inhabited, and alive, with crocodiles, ferpents. frogs, otters, crows, herons, curlews, jackdaws, &c. There

There feems, in fhort, nothing wanted but the appearance of wigwam and a canoe to complete the fcene.

Keeping along the West or Indian shore, I faw basking, on the sedgy banks, numbers of alligators\*, fome of them of an enormous size.

The high forefts on this coaft now wore a grand and fublime appearance; the earth rifing gradually from the river weftward, by eafy fwelling ridges, behind one another, lifting the diftant groves up into the fkies. The trees are of the lofty kind, as the grand laurel magnolia, palma elata, liquidambar ftyraciflua, fagus fylvatica, querci, juglans hiccory, fraxinus and others.

On my doubling a long point of land, the river appeared furprifingly widened, forming a large bay, of an oval form, and feveral miles in extent. On the Weft fide it was bordered round with low marfhes, and invefted with a fwamp of Cyprefs, the trees fo lofty, as to preclude the fight of the high-land forefts beyond them; and thefe trees, having flat tops, and all of equal height, feemed to be a green plain, lifted up and fupported upon columns in the air, round the Weft fide of the bay.

The cupreffus difficha ftands in the first order of North American trees. Its majeffic stature is furprising; and on approaching it we are struck with a kind of awe, at beholding the statelines of the trunk, listing its cumbrous top towards the struck and casting a wide shade upon the ground, as a dark intervening cloud, which, for a time, excludes

\* I have made use of the terms alligator and crocodile indifcriminately for this animal, alligator being the country name.

the

the rays of the fun. The delicacy of its colour and texture of its leaves, exceed every thing in vegetation. It generally grows in the water, or in low flat lands, near the banks of great rivers and lakes, that are covered, great part of the year, with two or three feet depth of water; and that part of the trunk which is subject to be under water, and four or five feet higher up, is greatly enlarged by prodigious buttreffes, or pilasters, which, in full grown trees, project out on every fide, to fuch a diffance, that feveral men might eafily hide themfelves in the hollows between. Each pilaster terminates under ground, in a very large, ftrong, ferpentine root, which ftrikes off, and branches every way, just under the furface of the earth : and from these roots grow woody cones, called cyprefs knees, four, five, and fix feet high, and from fix to eighteen inches and two feet in diameter at their bafes. The large ones are hollow, and ferve very well for beehives; a fmall fpace of the tree itfelf is hollow, nearly as high as the buttreffes already mentioned. From this place, the tree, as it were, takes another beginning, forming a grand straight column eighty or ninety feet high, when it divides every way around into an extensive flat horizontal top, like an umbrella, where eagles have their fecure nefts, and cranes and ftorks their temporary refting places: and what adds to the magnificence of their appearance is the ftreamers of long mofs that hang from the lofty limbs and float in the winds. This is their majeftic appearance when flanding alone, in large rice plantations, or thinly planted on the banks of great rivers.

Parroquets are commonly feen hovering and fluttering on their tops; they delight to fhell the balls, balls, its feed being their favourite food. The trunks of thefe trees, when hallowed out, make large and durable pettiaugers and canoes, and afford excellent fhingles, boards, and other timber, adapted to every purpofe in frame buildings. When the planters fell thefe mighty trees, they raife a ftage round them, as high as to reach above the buttreffes; on this ftage, eight or ten negroes afcend with their axes, and fall to work round its trunk. I have feen trunks of thefe trees that would meafure eight, ten, and twelve feet in diameter, for forty and fifty feet ftraight fhaft.

As I continued coafting the Indian fhore of this bay, on doubling a promontory, I fuddenly faw before me an Indian fettlement, or village. It was a fine fituation, the bank rifing gradually from the water. There were eight or ten habitations, in a row, or ftreet, fronting the water, and about fifty vards diftance from it. Some of the youth were naked, up to their hips in the water, fishing with rods and lines ; whilft others, younger, were diverting themfelves in fhooting frogs with bows and arrows. On my near approach, the little children took to their heels, and ran to fome women who were hoeing corn; but the flouter youth flood their ground, and, fmiling, called to me. As I paffed along, I obferved fome elderly people reclined on fkins fpread on the ground, under the cool fhade of fpreading Oaks and Palms, that were ranged in front of their houfes: they arofe, and eyed me as I paffed, but perceiving that I kept on without flopping, they refumed their former pofition. They were civil, and appeared happy in their fituation.

There was a large Orange grove at the upper end end of their village; the trees were large, carefully pruned, and the ground under them clean, open, and airy. There feemed to be feveral hundred acres of cleared land about the village; a confiderable portion of which was planted, chiefly with corn (Zea), Batatas, Beans, Pompions, Squafhes (Cucurbita verrucofa), Melons (Cucurbita citrullus), Tobacco (Nicotiana), &c. abundantly fufficient for the inhabitants of the village.

After leaving this village, and coafting a confiderable cove of the lake, I perceived the river before me much contracted within its late bounds. but still retaining the appearance of a wide and deep river, both coafts bordered for feveral miles with rich deep fwamps, well timbered with Cyprefs, Afh. Elm, Oak, Hiccory, Scarlet Maple, Nyffa aquatica, Nyffa tupilo, Gordonia lafianthus, Corypha palma, Corypha pumila, Laurus Borbonia, &c. The river gradually narrowing, I came in fight of Charlotia, where it is not above half a mile wide, but deep; and as there was a confiderable current against me, I came here to an anchor. This town was founded by Den. Rolle, efg. and is fituated on a high bluff, on the east coast, fifteen or twenty feet perpendicular from the river, and is in length half a mile, or more, upon its banks. The upper ftratum of the earth confifts entirely of feveral fpecies of fresh water Cochleæ, as Coch. helix, Coch. labyrinthus, and Coch. voluta; the fecond, of marine shells, as Concha mytulus, Conc. oftrea, Conc. peeton, Haliotis auris marina, Hal. patella, &c. mixed with fca land; and the third, or lower ftratum, which was a little above the common level of the river, of horizontal maffes of a pretty hard rock, composed almost entirely of the above shell. generally whole, and lying in every direction, petrified

trified or cemented together, with fine white fand ; and thefe rocks were bedded in a ftratum of clay. I faw many fragments of the earthen ware of the ancient inhabitants, and bones of animals, amongft the shells, and mixed with the earth, to a great depth. This high shelly bank continues, by gentle parallel ridges, near a quarter of a mile back from the river, gradually diminishing to the level of the fandy plains, which widen before and on each fide eastward, to a feemingly unlimited distance, and appear green and delightful, being covered with grafs and the Corypha repens, and thinly planted with trees of the long leaved, or Broom Pine, and decorated with clumps, or coppices, of floriferous, evergreen, and aromatic fhrubs, and enamelled with patches of the beautiful little Kalmea ciliata, Thefe fhelly ridges have a vegetable furface of loofe black mould, very fertile, which naturally produces Orange groves, Live Oak, Laurus Borbonia, Palma elata, Carica papaya, Sapindus, Liquidambar, Fraxinus, exelfior, Morus rubra, Ulmus, Tilia, Sambucus, Ptelea, Tallow-nut or Wild Lime, and many others.

Mr. Rolle obtained from the crown a grant of forty thoufand acres of land, in any part of Eaft Florida, where the land was unlocated. It feems, his views were to take up his grant near St. Mark's, in the bay of Apalatchi; and he fat fail from England, with about one hundred families, for that place; but by contrary winds, and ftrefs of weather, he miffed his aim; and being obliged to put into St. Juan's, he, with fome of the principal of his adherents, afcended the river in a boat, and being ftruck with its majefty, the grand fituations of its banks, and fertility of its lands, and at the fame time, confidering the extensive navigation of the river, river, and its near vicinity to St. Augustine, the capital and feat of government, he altered his views on St. Mark's, and fuddenly determined on this place, where he landed his first little colony. But it feems, from an ill concerted plan in its infant establishment, negligence, or extreme parsimony in fending proper recruits and other necessfaries, together with a bad choice of citizens, the fettlement by degrees grew weaker, and at length totally fell to the ground. Those of them who escaped the constant contagious fevers, fled the dreaded place, betaking themselves for fubfishence to the more fruitful and populous regions of Georgia and Carolina.

The remaining old habitations are mouldering to earth, except the manfion houfe, which is a large frame building, of cyprefs wood, yet in tolerable repair, and inhabited by an overfeer and his family. There is alfo a blackfmith with his fhop and family, at a finall diftance from it. The moft valuable diftrict belonging to Mr. Rolle's grant, lies on Dun's lake, and on a little river, which runs from it into St. Juan. This diftrict confifts of a vaft body of rich fwamp land, fit for the growth of rice, and fome very excellent high land furrounding it. Large fwamps of excellent rice land are alfo fituated on the weft fhore of the river, oppofite to Charlotia.

The aborigines of America had a very great town in this place, as appears from the great tumuli, and conical mounts of earth and fhells, and other traces of a fettlement which yet remain. There grew in the old fields on thefe heights, great quantities of callicarpa, and of the beautiful fhrub annona: the flowers of the latter are large, white, and fweet fcented.

Having

Having obtained from the people here directions for difcovering the little remote island where the traders and their goods were fecreted, which was about feven miles higher up, I fat fail again, with a fair wind, and in about one hour and an half arrived at the defired place, having fortunately taken the right channel of the river, amongst a multitude of others, occasioned by a number of low fwampy islands. But I should have run by the landing, if the centinels had not by chance feen me drawing near them; who perceiving that I was a white man, ventured to hail me; upon which I immediately ftruck fail, and came to. Upon my landing they conducted me to their encampment, forty or fifty yards from the river, in an almost impenetrable thicket. Upon my inquiry, they confirmed the accounts of the amicable treaty at St. Augustine, and in confequence thereof, they had already removed great part of the goods to the trading-houfe, which was a few miles higher up, on the Indian fhore. They flowed me my cheft, which had been carefully preferved, and upon infpection I found every thing in good order. Having learned from them, that all the effects would, in a few days time, be removed to the ftore-house, I bid adieu to them, and in a little time arrived at the trading-houfe, where I was received with great politenefs, and treated, during a refidence of feveral months, with the utmost civility and friendship, by Mr. C. M'Latche, Meffrs. Spalding and Kelfall's agent.

The river almost from Charlotia, and for near twelve miles higher up, is divided into many channels by a great number of islands.

CHAP.

94

#### NORTH AMÉRICA.

# CHAP. IV.

HAVING refted myfelf a few days, and by ranging about the neighbouring plains and groves, furrounding this pleafant place, pretty well recovered my ftrength and fpirits, I began to think of planning my future excursions, at a distance round about this centre. I found, from frequent conferences with Mr. M'Latche, that I might with fafety extend my journeys every way, and with prudence, even into the towns and fettlements of the Indians, as they were perfectly reconciled to us, and fincerely wished for the renewal of our trade.

There were three trading-houfes to be eftablished this fummer, each of which had its supplies from the flore on St. Juan, where I now had my refidence, and in which the produce or returns were to centre annually, in order to be shipped for Savanna or Sunbury, and from thence to Europe.

One of these trading-houses was to be fixed about fixty miles higher up the river, from this place, by the name of Spalding's upper flore; a fecond at Alachua, about fifty miles west from the river St. Juan; and a third at Talahafochte, a confiderable town of the Siminoles, on the river Little St. Juan, near the bay of Apalachi, about one hundred and twenty miles distance. Each of these places I defigned to visit, before the return of the vessel to Frederica in the autumn, that I might avail myfelf of an opportunity fo favourable for transporting my collections fo far on their way towards Charleston.

95

The company for Alachua were to fet off in about a month; that to Little St. Juan, in July, which fuited me exceedingly well, as I might make my tour to the upper flore directly, that part of the country being at this feafon enrobed in its richeft and gayeft apparel.

About the middle of May, every thing being in readinefs to proceed up the river, we fat fail. The traders with their goods in a large boat went ahead, and myfelf in my little veffel followed them; and as their boat was large, and deeply laden, I found that I could eafily keep up with them, and, if I chofe, out-fail them; but I preferred keeping them company, as well for the fake of collecting what I could from converfation, as on account of my fafety in croffing the great lake, expecting to return alone, and defcend the river at my own leifure.

We had a pleafant day, the wind fair and moderate, and ran by Mount Hope, fo named by my father John Bartram, when he afcended this river, about fifteen years ago. It is a very high fhelly bluff, upon the little lake. It was at that time a fine Orange grove, but now cleared and converted into a large indigo plantation, the property of an Englifh gentleman, under the care of an agent. In the evening we arrived at Mount Royal, where we came to, and ftayed all night : we were treated with great civility, by a gentleman whofe name was Kean, and who had been an Indian trader.

From this place we enjoyed a most enchanting prospect of the great Lake George, through a grand avenue, if I may so term this narrow reach of the river, which widens gradually for about two miles, towards towards its entrance into the lake, fo as to elude the exact rules of perfpective, and appears of an equal width.

At about fifty yards diftance from the landing place, stands a magnificent Indian mount. About fifteen years ago I vifited this place, at which time there were no fettlements of white people, but all appeared wild and favage; yet in that uncultivated ftate it poffeffed an almost inexpressible air of grandeur, which was now entirely changed. At that time there was a very confiderable extent of old fields round about the mount; there was alfo a large orange grove, together with palms and live oaks, extending from near the mount, along the banks, downwards, all of which has fince been cleared away to make room for planting ground. But what greatly contributed towards completing the magnificence of the fcene, was a noble Indian highway, which led from the great mount, on a straight line, three quarters of a mile, first through a point or wing of the orange grove, and continuing thence through an awful foreft of live oaks, it was terminated by palms and laurel magnolias, on the verge of an oblong artificial lake, which was on the edge of an extensive green level favanna. This grand highway was about fifty yards wide, funk a little below the common level, and the earth thrown up on each fide, making a bank of about two feet high. Neither nature nor art could any where prefent a more striking contrast, as you approached this favanna. The glittering water pond played on the fight through the dark grove, like a brilliant diamond, on the bosom of the illumined lavanna, bordered with various flowery fhrubs and plants; and as we advanced into the plain, the H fight

98

fight was agreeably relieved by a diftant view of the forefts, which partly environed the green expanse on the left hand, whilft the imagination was still flattered and entertained by the far diftant mifty points of the furrounding forefts, which projected into the plain, alternately appearing and difappearing, making a grand fweep round on the right, to the diftant banks of the great lake. But that venerable grove All has been cleared away and is now no more. planted with indigo, corn, and cotton, but fince deferted : there was now fcarcely five acres of ground under fence. It appeared like a defart to a great extent, and terminated, on the land fide, by frightful thickets, and open pine forefts.

It appears, however, that the late proprietor had fome talte, as he has preferved the mount and this little adjoining grove inviolate. The profpect from this flation is fo happily fituated by nature as to comprife at one view the whole of the fublime and pleafing.

At the reanimating appearance of the rifing fun, nature again revives; and I obey the cheerful fummons of the gentle monitors of the meads and groves.

Ye vigilant and faithful fervants of the Most High! ye who worship the Creator morning, noon, and eve, in simplicity of heart ! I haste to join the universal anthem. My heart and voice unite with yours, in sincere homage to the great Creator, the universal fovereign.

O may I be permitted to approach the throne of mercy! May these my humble and penitent supplications, amids the universal shouts of homage from thy creatures, meet with thy acceptance !

And

And although I am fenfible, that my fervice cannot increafe or diminifh thy glory, yet it is pleafing to thy fervant to be permitted to found thy praife; for, O fovereign Lord! we know that thou alone art perfect, and worthy to be worfhipped. O univerfal Father! look down upon us, we we befeech thee, with an eye of pity and compafion, and grant that univerfal peace and love may prevail in the earth, even that divine harmony which fills the heavens, thy glorious habitation!

And, O fovereign Lord! fince it has pleafed thee to endue man with power and pre-eminence here on earth, and eftablifh his dominion over all creatures, may we look up to thee, that our underftanding may be fo illuminated with wifdom, and our hearts warmed and animated with a due fenfe of charity, that we may be enabled to do thy will, and perform our duty towards those fubmitted to our fervice and protection, and be merciful to them, even as we hope for mercy.

Thus may we be worthy of the dignity and fuperiority of the high and diftinguished flation in which thou haft placed us here on earth.

The morning being fair, and having a gentle favourable gale, we left our pleafant harbour in purfuit of our defired port.

Now as we approach the capes, behold the little ocean of Lake George, the diftant circular coaft gradually rifing to view, from his mifty fringed horizon. I cannot entirely fupprefs my apprehenfions of danger. My veffel at once diminifhed to a nut-fhell, on the fwelling feas, and at the diftance of a few miles, mult appear to the furprifed H 2 obferver obferver as fome aquatic animal, at intervals emerging from its furface. This lake is a large and beautiful piece of water; it is a dilatation of the river St. Juan, and is about fifteen miles wide, and generally about fifteen or twenty feet deep, excepting at the entrance of the river, where lies a bar, which carries eight or nine feet water. The lake is beautified with two or three fertile islands. The first lies in the bay, as we alcend into the lake, near the west coast, about S. W. from Mount Royal, from whence it appears to form part of the weft thore of the bay. The fecond island feems to ride on the lake before us as we enter, about a mile within it. This island is about two miles in breadth, and three quarters of a mile where broadeit, mostly high land, well timbered and fertile. The third and last lies at the fouth end of the lake, and near the entrance of the river; it is nearly circular, and contains but a few acres of land, the earth high and fertile, and almost an entire orange grove, with grand magnolias and palms.

Soon after entering the lake, the wind blew fo brifkly from the weft, with thunder-clouds gathering upon the horizon, that we were obliged to feek a fhelter from the approaching tempeft, on the large beautiful ifland before mentioned; where, having gained the fouth promontory, we met with an excellent harbour, in which we continued the remaining part of the day and the night. This circumftance gave me an opportunity to explore the greateft part of it.

This ifland appears, from obvious vestiges, to have been once the chosen residence of an Indian prince, there being to this day evident remains of a large

100

a large town of the Aborigines. It was fituated on an eminence, near the banks of the lake, and commanded a comprehensive and charming prospect of the waters, islands, east and west shores of the lake, the capes, the bay, and Mount Royal; and to the fouth the view is in a manner infinite, where the fkies and waters feem to unite. On the fite of this ancient town, stands a very pompous Indian mount, or conical pyramid of earth, from which runs in a ftrait line a grand avenue or Indian highway, through a magnificent grove of magnolias, live oaks, palms, and orange trees, terminating at the verge of a large green level favanna. This island appears to have been well inhabited, as is very evident, from the quantities of fragments of Indian earthenware, bones of animals and other remains, particularly in the fhelly heights and ridges all over the island. There are no habitations at prefent on the ifland, but a great number of deer, turkeys, bears, wolves, wild cats, fquirrels, racoons, and opoffums. The bears are invited here to partake of the fruit of the orange tree, which they are immoderately fond of; and both they and turkeys are made extremely fat and delicious, from their feeding on the fweet acorns of the live oak.

There grow on this ifland many curious fhrubs, particularly a beautiful fpecies of lantana (perhaps lant. camerara, Lin. Syft. Veget. p. 473). It grows in coppices in old fields, about five or fix feet high, the branches adorned with rough ferrated leaves, which fit oppofite, and the twigs terminated with umbelliferous tufts of orange coloured bloffoms, which are fucceeded by a clufter of finall blue berries: the flowers are of various colours, on the fame plant, and even in the fame clufter, as crimfon,

crimfon, fcarlet, orange and golden yellow: the whole plant is of a moft agreeable fcent. The orange-flowered fhrub Hibifcus is alfo confpicuoufly beautiful (perhaps Hibifc. fpinifex of Linn.) It grows five or fix feet high, and fubramous. The branches are divergent, and furnifhed with cordated leaves, which are crenated. The flowers are of a moderate fize, and of a deep fplendid yellow. The pericarpii are fpiny. I alfo faw a new and beautiful palmated leaved convolvulus\*. This vine rambles over the fhrubs, and ftrolls about on the ground; its leaves are elegantly fituated, of a deep grafs green, and fit on long petioles. The flowers are very large, infundibuliform, of a pale incarnate colour, having a deep crimfon eye.

There are fome rich fwamps on the fhores of the island, and these are verged on the outfide with large marfhes, covered entirely with tall grafs, rufhes, and herbaceous plants; amongst these are feveral fpecies of Hibifcus, particularly the hibifcus cocineus. This most stately of all herbaceous plants grows ten or twelve feet high, branching regularly, fo as to form a fharp cone. Thefe branches alfo divide again, and are embellished with large expanded crimfon flowers. I have feen this plant of the fize and figure of a beautiful little tree, having at once feveral hundred of thefe fplendid flowers, which may be then feen at a great distance. They continue to flower in fucceffion all fummer and autumn, when the stems wither and decay; but the perennial root fends forth new ftems the next fpring, and fo on for many years. Its leaves are large, deeply and elegantly finuated having fix or feven very narrow dentated feg-.

\* Convol. diffectus.

ments;

#### NORTH AMERICA.

ments; the furface of the leaves, and of the whole plant, is fmooth and polifhed. Another fpecies of hibifcus, worthy of particular notice, is likewife a tall flourishing plant; feveral ftrong ftems arife from a root, five, fix, and feven feet high, embellished with ovate lanciolate leaves, covered with a fine down on their nether furfaces: the flowers are very large, and of a deep incarnate colour.

The laft we fhall now mention feems nearly allied to the alcea; the flowers are a fize lefs than the hibifcus, and of a fine damafk rofe colour, and are produced in great profusion on the tall pyramidal ftems.

The lobelia cardinalis grows in great plenty here, and has a most splendid appearance amidst extensive meadows of the golden corymbous jacobea (senecio jacobea) and odorous pancratium.

Having finished my tour on this princely island, I prepared for repose. A calm evening had fucceeded the stormy day. The late tumultuous winds had now ceased, the face of the lake had become placid, and the skies serene; the balmy winds breathed the animating odours of the groves around me; and as I reclined on the elevated banks of the lake, at the foot of a live oak, I enjoyed the profpect of its wide waters, its fringed coasts, and the distant horizon.

The fquadrons of aquatic fowls, emerging out of the water, and haftening to their leafy coverts on thore, clofed the varied fcenes of the paft day. I was lulled afleep by the mixed founds of the wearied

103

furt,

furf, lapfing on the hard beaten flore, and the tender warblings of the painted nonpareil and other winged inhabitants of the grove.

At the approach of day the dreaded voice of the alligators fhook the ifle, and refounded along the neighbouring coafts, proclaiming the appearance of the glorious fun. I arofe, and prepared to accomplish my daily task. A gentle favourable gale led us out of the harbour : we failed across the lake, and towards evening entered the river on the oppofite fouth coaft, where we made a pleafant and fafe harbour, at a shelly promontory, the east cape of the river on that fide of the lake. It is a most defirable fituation, commanding a full view of the lake. The cape opposite to us was a vast cyprefs fwamp, environed by a border of graffy marshes, which were projected farther into the lake by floating fields of the bright green piftia ftratoites, which rofe and fell alternately with the waters. Juft to leeward of this point, and about half a mile in the lake is the little round island already mentioned. But let us take notice of our harbour and its environs: it is a beautiful little cove just within the fandy point, which defends it from the beating furf of the lake. From a shelly bank, ten or twelve feet perpendicular from the water, we entered a grove of live oaks, palm, magnolia, and orange trees, which grow amongst shelly hills, and low ridges, occupying about three acres of ground, comprehending the ifthmus, and a part of the peninfula, which joins it to the graffy plains. This enchanting little forest is partly encircled by a deep creek, a branch of the river, that has its fource in the high forefts of the main, fouth eaft from us; and winds through the extensive graffy plains which furround

# NORTH AMERICA.

furround this peninfula, to an almost infinite diftance, and then unites its waters with those of the river, in this little bay which formed our harbour. This bay, about the mouth of the creek, is almost covered with the leaves of the nymphæa nelumbo: its large fweet-fcented yellow flowers are lifted up two or three feet above the furface of the water, each upon a green starol, representing the cap of liberty.

The evening drawing on, and there being no convenient landing place for feveral miles higher up the river, we concluded to remain here all night. Whilft my fellow travellers were employing themfelves in collecting fire-wood, and fixing our camp, I improved the opportunity, in reconnoitering our ground; and taking my fufee with me, I penetrated the grove, and afterwards entered fome almost unlimited favannas and plains, which were abfolutely enchanting; they had been lately burnt by the Indian hunters, and had just now recovered their vernal verdure and gaiety.

How happily fituated is this retired fpot of earth! What an elyfium it is! where the wandering Siminole, the naked red warrior, roams at large, and after the vigorous chafe retires from the fcorching heat of the meridian fun. Here he reclines, and repofes under the odoriferous fhades of Zanthoxylon, his verdant couch guarded by the Deity; Liberty, and the Mufes, infpiring him with wildom and valour, whilft the balmy zephyrs fan him to fleep.

Seduced by thefe fublime enchanting fcenes of primitive nature, and thefe vifions of terreftrial happinefs, I had roved far away from Cedar Point, but awakening

## TRAVELS IN

awakening to my cares, I turned about, and in the evening regained our camp.

On my return, I found fome of my companions fifting for trout, round about the edges of the floating nymphæa, and not unfuccefsfully, having then caught more than fufficient for us all. As the method of taking these fifth is curious and fingular, I fhall just mention it.

They are taken with a hook and line, but without any bait. Two people are in a little canoe, one fitting in the stern to steer, and the other near the bow, having a rod ten or twelve feet in length, to one end of which is tied a ftrong line, about twenty inches in length, to which are fastened three large hooks, back to back. Thefe are fixed very fecurely, and covered with the white hair of a deer's tail. fhreds of a red garter, and fome particoloured feathers, all which form a tuft, or taffel, nearly as large as one's fift, and entirely cover and conceal the hooks: this is called a bob. The fteerfman paddles foftly, and proceeds flowly along fhore, keeping the boat parallel to it, at a diftance just fufficient to admit the fifherman to reach the edge of the floating weeds along fhore; he now ingenioufly fwings the bob backwards and forwards, juft above the furface, and fometimes tips the water with it; when the unfortunate cheated troat inftantly fprings from under the weeds, and feizes the fuppofed prey. Thus he is caught without a poffibility of escape, unless he break the hooks, line, or rod, which he, however, fometimes does by dint of ftrength; but, to prevent this, the fisherman used to the fport is careful not to raife the reed fuddenly up, but jerks it instantly backwards, then steadily drags the flurdy reluctant fish to the fide of the canoe,

canoe, and with a fudden upright jerk brings him into it.

The head of this fifh makes about one third of his length, and confequently the mouth is very large: birds, fifh, frogs, and even ferpents, are frequently found in its ftomach.

The trout is of a lead colour, inclining to a deep blue, and marked with transverse waved lists, of a deep flate colour, and when fully grown, has a caft of red or brick colour. The fins, with the tail, which is large and beautifully formed, are of a light reddifh purple, or flefh colour; the whole body is covered with large scales. But what is most fingular, this fifh is remarkably ravenous; nothing living that he can feize upon escapes his jaws; and the opening and extending of the branchioftega, at the moment he rifes to the furface to feize his prey, discovering his bright red gills through the transparent waters, give him a very terrible appearance. Indeed it may be observed that all fish of prey have this opening and covering of the gills very large, in order to difcharge the great quantity of water which they take in at their mouth, when they ftrike at their prey. This fifh is nearly cuneiform, the body tapering gradually from the breaft to the tail, and lightly compreffed on each fide. They frequently weigh fifteen, twenty, and thirty pounds, and are delicious food.

My companion, the trader, being defirous of croffing the river to the oppofite fhore, in hopes of getting a turkey, I chofe to accompany him, as it offered a good opportunity to obferve the natural productions of thofe rich fwamps and iflands of the river. Having croffed the river, which is here five

five or fix hundred yards wide, we entered a narrow channel, which, after a ferpentine course for some miles, rejoins the main river again, above; forming a large fertile ifland, of rich low land. We landed on this illand, and foon faw a fine roebuck\* at fome diffance from us, who appeared leader of a company of deer that were feeding near him on the verge of a green meadow. My companion parted from me in pursuit of the deer, one way; and I, observing a flock of turkeys at some distance, on the other, directed my fteps towards them, and with great caution got near them; when, fingling out a large cock, and being just on the point of firing, I observed that feveral young cocks were affrighted, and in their language warned the reft to be on their guard against an enemy, whom I plainly perceived was industriously making his fubtile approaches towards them, behind the fallen trunk of a tree, about twenty yards from me. This cunning fellow-hunter was a large fat wild cat (lynx): he faw me, and at times feemed to watch my motions, as if determined to feize the delicious prey before me. Upon which I changed my object, and levelled my piece at him. At that inftant, my companion, at a diftance, alfo difcharged his piece at the deer, the report of which alarmed the flock of turkeys; and my fellow-hunter, the cat, fprang over the log and trotted off. The trader also miffed his deer: thus we foiled each other. By this time it being near night, we returned to camp, where having a delicious meal ready prepared for our hungry ftomachs, we fat down in a circle round our wholefome repaft.

How fupremely bleffed were our hours at this time! plenty of delicious and healthful food, our

\* Cervus fylvaticus. The American deer.

ftomachs

ftomachs keen, with contented minds; under no controul, but what reafon and ordinate passions dictated, far removed from the seats of strife.

Our fituation was like that of the primitive flate of man, peaceable, contented, and fociable. The fimple and neceffary calls of nature being fatisfied, we were altogether as brethren of one family, ftrangers to envy, malice, and rapine.

The night being over we arofe, and purfued our courle up the river; and in the evening reached the trading-house, Spalding's upper store, where I took up my quarters for several weeks.

On our arrival at the upper flore, we found it occupied by a white trader, who had for a companion a very handfome Siminole young woman. Her father, who was a prince by the name of the White Captain, was an old chief of the Siminoles, and with part of his family, to the number of ten or twelve, was encamped in an orange grove near the flores, having lately come in from a hunt.

This white trader, foon after our arrival, delivered up the goods and ftore-houfes to my companion, and joined his father-in-law's camp, and foon after went away into the forefts on hunting and trading amongft the flying camps of Siminoles.

He is at this time unhappy in his connexions with his beautiful favage. It is but a few years fince he came here, I think from north Carolina, a flout genteel well-bred man, active, and of a heroic and amiable disposition; and by his industry, honesty, and engaging manners, had gained the affections of the Indians, and soon made a little fortune by traffic with

## TRAVELS IN

with the Siminoles: when unfortunately meeting with this little charmer, they were married in the Indian manner. He loves her fincerely, as the poffeffes every perfection in her perfon to render a man happy. Her features are beautiful, and manners engaging. Innocence, modefty, and love, appear to a ftranger in every action and movement; and these powerful graces the has to artfully played upon her beguiled and vanquished lover, and unhappy flave, as to have already drained him of all his poffeffions, which the diffioneftly distributes amongst her favage relations. He is now poor, emaciated, and half diffracted, often threatening to shoot her, and afterwards put an end to his own life; yet he has not refolution even to leave her; but now endeavours to drown and forget his forrows in deep draughts of brandy. Her father condemns her difhoneft and cruel conduct.

Thefe particulars were related to me by my old friend the trader, directly after a long conference which he had with the White Captain on the fubject, his fon-in-law being prefent. The fcene was affecting; they both fhed tears plentifully. My reasons for mentioning this affair, fo foreign to my bufinefs, was to exhibit an inftance of the power of beauty in a favage, and her art and fineffe in improving it to her private ends. It is, however, but doing justice to the virtue and moral conduct of the Siminoles, and American aborigines in general, to observe, that the character of this woman is condemned and detefted by her own people of both fexes; and if her husband should turn her away, according to the cuftoms and ufages of these people, fhe would not get a hufband again, as a divorce feldom takes place but in confequence of a deliberate

rate impartial trial, and public condemnation, and then the would be looked upon as a harlot.

Such is the virtue of these untutored favages: but I am afraid this is a common phrase epithet, having no meaning, or at least improperly applied; for these people are both well tutored and civil; an d it is apparent to an impartial observer, who resides but a little time amongst them, that it is from the most delicate fense of the honour and reputation of their tribes and families, that their laws and customs receive their force and energy. This is the divine principle which influences their moral conduct, and folely preferves their conflictution and civil government in that purity in which they are found to prevail amongst them.

CHAP.

# CHAP. V.

BEING defirous of continuing my travels and obfervations higher up the river, and having an invitation from a gentleman who was agent for, and refident at, a large plantation, the property of an Englifh gentleman, about fixty miles higher up, I refolved to purfue my refearches to that place; and having engaged in my fervice a young Indian, nephew to the White Captain, he agreed to affift me in working my veffel up as high as a certain bluff, where I was, by agreement, to land him, on the Weft or Indian fhore, whence he defigned to go in queft of the camp of the White Trader, his relation.

Provisions and all neceffaries being procured, and the morning pleafant, we went on board and ftood up the river. We paffed for feveral miles on the left, by iflands of high fwamp land, exceedingly fertile, their banks for a good diftance from the water, much higher than the interior part, and fufficiently fo to build upon, and be out of the reach of inundations. They confift of a loofe black mould, with a mixture of fand, fhells, and diffolved vege-The oppofite Indian coaft is a perpendicutables. lar bluff, ten or twelve feet high, confifting of a black fandy earth, mixed with a large proportion of fhells, chiefly various species of fresh water cochleæ and mytuli. Near the river, on this high fhore, grew corypha palma, magnolia grandiflora, live oak, callicarpa, myrica cerifera, hybifcus fpinifex, and the beautiful evergreen fhrub called wild lime or tallow nut. This last shrub grows fix or eight feet high, many erect ftems fpring from a root; the

the leaves are lanceolate and entire, two or three inches in length and one in breadth, of a deep green colour, and polifhed; at the foot of each leaf grows a fliff fharp thorn; the flowers are fmall and in clufters, of a greenifh yellow colour, and fweet fcented; they are fucceeded by a large oval fruit, of the fhape and fize of an ordinary plumb, of a fine yellow colour when ripe; a foft fweet pulp covers a nut which has a thin fhell, enclofing a white kernel fomewhat of the confiftence and tafte of the fweet almond, but more oily and very much like hard tallow, which induced my father when he firft obferved it, to call it the tallow-nut.

At the upper end of this bluff is a fine orange Here my Indian companion requefted me grove. to fet him on fhore, being already tired of rowing under a fervid fun, and having for fome time intimated a diflike to his fituation. I readily complied with his defire, knowing the impoffibility of compelling an Indian against his own inclinations, or even prevailing upon him by reafonable arguments, when labour is in the question. Before my veffel reached the fhore, he fprang out of her and landed, when uttering a fhrill and terrible whoop, he bounded off like a roebuck, and I loft fight of him. I at first apprehended, that as he took his gun with him, he intended to hunt for fome game and return to me in the evening. The day being exceffively hot and fultry, I concluded to take up my quarters here until next morning.

The Indian not returning this morning, I fet fail alone. The coafts on each fide had much the fame appearance as already defcribed. The palm trees here feem to be of a different fpecies from the cabbage tree; their ftraight trunks are fixty, eighty, or ninety I feet

## TRAVELS IN

feet high, with a beautiful taper, of a bright aff colour, until within fix or feven feet of the top, where it is a fine green colour, crowned with an orb of rich green plumed leaves : I have meafured the ftem of these plumes fisteen feet in length, besides the plume, which is nearly of the fame length.

The little lake, which is an expansion of the river, now appeared in view; on the east fide are extenfive marshes, and on the other, high forests and orange groves, and then a bay, lined with vaft cyprefs fwamps, both coafts gradually approaching each other, to the opening of the river again, which is in this place about three hundred yards wide. Evening now drawing on, I was anxious to reach fome high bank of the river, where I intended to lodge ; and agreeably to my wifhes, I foon after difcovered on the west shore a little promontory, at the turning of the river, contracting it here to about one hundred and fifty yards in width. This promontory is a peninfula, containing about three acres of high ground, and is one entire orange grove, with a few live oaks, magnolias and palms. Upon doubling the point, I arrived at the landing, which is a circular harbour, at the foot of the bluff, the top of which is about twelve feet high; the back of it is a large cyprefs fwamp, that fpreads each way, the right wing forming the welt coaft of the little lake. and the left ftretching up the river many miles, and encompating a vaft fpace of low graffy marshes. From this promontory, looking eaftward across the river, I beheld a landscape of low country, unparralleled as I think ; on the left is the east coast of the little lake, which I had just passed; and from the orange bluff at the lower end, the high forefts begin, and increase in breadth from the shore of the lake. making

# NORTH AMERICA.

making a circular fweep to the right, and contain many hundred thoufand acres of meadow; and this grand fweep of high forefts encircles, as I apprehend, at leaft twenty miles of thefe green fields, interfperfed with hommocks or iflets of evergreen trees, where the fovereign magnolia and lordly palm ftand confpicuous. The iflets are high fhelly knolls, on the fides of creeks or branches of the river, which wind about and drain off the fuperabundant waters that cover thefe meadows during the winter feafon.

The evening was temperately cool and calm. The crocodiles began to roar and appear in uncommon numbers along the fhores and in the river. I fixed my camp in an open plain, near the utmost projection of the promontory, under the shelter of a large live oak, which flood on the highest part of the ground, and but a few yards from my boat. From this open, high fituation, I had a free profpect of the river, which was a matter of no trivial confideration to me, having good reafon to dread the fubtle attacks of the alligators, who were crowding about my harbour. Having collected a good quantity of wood for the purpole of keeping up a light and fmoke during the night, I began to think of preparing my fupper, when, upon examining my stores, I found but a fcanty provision. I thereupon determined, as the most expeditious way of fupplying my neceflities, to take my bob and try for fome trout. About one hundred yards above my harbour began a cove or bay of the river, out of which opened a large lagoon. The mouth or entrance from the river to it was narrow, but the waters foon after fpread and formed a little lake, extending into the marshes: its entrance and shores with-

12

in

#### TRAVELS IN

in I observed to be verged with floating lawns of the pistia and nymphea and other aquatic plants; these I knew were excellent haunts for trout.

The verges and iflets of the lagoon were elegantly embellished with flowering plants and shrubs; the laughing coots with wings half fpread were tripping over the little coves and hiding themfelves in the tufts of grafs; young broods of the painted fummer teal, fkimming the still furface of the waters, and following the watchful parent unconfcious of danger, were frequently furprifed by the voracious trout; and he, in turn, as often by the fubtle greedy alligator. Behold him rushing forth from the flags and reeds. His enormous body fwells. His plaited tail brandifhed high, floats upon the The waters like a cataract descend from his lake. opening jaws. Clouds of fmoke iffue from his di-The earth trembles with his thunder. lated noftrils. When immediately from the oppofite coaft of the lagoon, emerges from the deep his rival champion. They fuddenly dart upon each other. The boiling furface of the lake marks their rapid courfe, and a terrific conflict commences. They now fink to the bottom folded together in horrid wreaths. The water becomes thick and discoloured. Again they rife, their jaws clap together, re-echoing through the deep furrounding forefts. Again they fink, when the contest ends at the muddy bottom of the lake, and the vanquished makes a hazardous escape, hiding himfelf in the muddy turbulent waters and fedge on a diftant fhore. The proud victor exulting returns to the place of action. The fhores and forefts refound his dreadful roar, together with the triumphing shouts of these plaited tribes around, witnesses of the horrid combat.

My

My apprehensions were highly alarmed after being a spectator of so dreadful a battle. It was obvious that every delay would but tend to encrease my dangers and difficulties, as the fun was near fetting, and the alligators gathered around my harbour from all quarters. From these confiderations I concluded to be expeditious in my trip to the lagoon, in order to take fome fifh. Not thinking it prudent to take my fusee with me, left I might lofe it overboard in cafe of a battle, which I had every reason to dread before my return. I therefore furnished myfelf with a club for my defence, went on board, and penetrating the first line of those which furrounded my harbour, they gave way; but being purfued by feveral very large ones, I kept ftrictly on the watch, and paddled with all my might towards the entrance of the lagoon, hoping to be fheltered there from the multitude of my affailants; but ere I had half-way reached the place, I was attacked on all fides, feveral endeavouring to overfet the cance. My fituation now became precarious to the last degree : two very large ones attacked me closely, at the fame inftant, rufhing up with their heads and part of their bodies above the water, roaring terribly and belching floods of water over me. They ftruck their jaws together fo clofe to my ears, as almost to stun me, and I expected every moment to be dragged out of the boat and inftantly devoured. But I applied my weapons fo effectually about me, though at random, that I was fo fuccefsful as to beat them off a little; when, finding that they defigned to renew the battle, I made for the fhore, as the only means left me for my prefervation; for, by keeping close to it, I should have my enemies on one fide of me only, whereas I was before furrounded by them; and there was a probability, if pushed

tç

to the last extremity, of faving myfelf, by jumping out of the canoe on fhore, as it is eafy to outwalk them on land, although comparatively as fwift as lightning in the water. I found this last expedient alone could fully answer my expectations, for as foon as I gained the fhore, they drew off and kept aloof. This was a happy relief, as my confidence was, in fome degree, recovered by it. On recollecting myfelf, I difcovered that I had almost reached the entrance of the lagoon, and determined to venture in, if poffible, to take a few fifh, and then return to my harbour, while day-light continued; for I could now, with caution and refolution, make my way with fafety along fhore; and indeed there was no other way to regain my camp, without leaving my boat and making my retreat through the marshes and reeds, which, if I could even effect, would have been in a manner throwing myfelf away, for then there would have been no hopes of ever recovering my bark, and returning in fafety to any fettlements of men. I accordingly proceeded, and made good my entrance into the lagoon, though not without opposition from the alligators, who formed a line across the entrance, but did not purfue me into it, nor was I molefted by any there though there were fome very large ones in a cove at the upper end. I foon caught more trout than I had prefent occasion for, and the air was too hot and fultry to admit of their being kept for many hours, even though falted or barbecued. I now prepared for my return to camp, which I fucceeded in with but little trouble, by keeping clofe to the fhore; yet I was opposed upon re-entering the river out of the lagoon, and purfued near to my landing (though not closely attacked), particularly by an old daring one, about twelve feet in length, who

who kept clofe after me; and when I ftepped on shore and turned about, in order to draw up my canoe, he rushed up near my feet, and lay there for fome time, looking me in the face, his head and fhoulders out of water. I refolved he fhould pay for his temerity, and having a heavy load in my fufee, I ran to my camp, and returning with my piece, found him with his foot on the gunwale of the boat, in fearch of fifh On my coming up he withdrew fullenly and flowly into the water, but foon returned and placed himfelf in his former polition, looking at me, and feeming neither fearful nor any way difturbed. I foon difpatched him by lodging the contents of my gun in his head, and then proceeded to cleanfe and prepare my fish for fupper; and accordingly took them out of the boat, laid them down on the fand clofe to the water, and began to fcale them; when, raifing my head, I faw before me, through the clear water, the head and fhoulders of a very large alligator, moving flowly towards me. I inftantly stepped back, when, with a fweep of his tail, he brushed off several of my fish. was certainly most providential that I looked up at that inftant, as the monfter would probably, in lefs than a minute, have feized and dragged me into the river. This incredible boldness of the animal difturbed me greatly, fuppofing there could now be no reasonable fafety for me during the night, but by keeping continually on the watch : I therefore, as foon as I had prepared the fifh, proceeded to fecure myfelf and effects in the best manner I could. In the first place, I hauled my bark upon the shore, almost clear out of the water, to prevent their overfetting or finking her; after this, every moveable was taken out and carried to my camp, which was but a few yards off; then ranging fome drv

dry wood in fuch order as was the molt convenient, I cleared the ground round about it, that there might be no impediment in my way, in cafe of an attack in the night, either from the water or the land; for I difcovered by this time, that this fmall iffhmus, from its remote fituation and fruitfulnefs, was reforted to my bears and wolves. Having prepared myfelf in the beft manner I could, I charged my gun and proceeded to reconnoitre my camp and the adjacent grounds; when I difcovered that the peninfula and grove, at the diffance of about two hundred yards from my encampment, on the land fide, were invefted by a cyprefs fwamp, covered with water, which below was joined to the fhore of the little lake, and above to the marshes furrounding the lagoon; fo that I was confined to an iflet exceedingly circumfcribed, and I found there was no other retreat for me, in cafe of an attack, but by either afcending one of the large oaks, or pushing off with my boat.

It was by this time dufk, and the alligators had nearly ceafed their roar, when I was again alarmed by a tumultuous noife that feemed to be in my harbour, and therefore engaged my immediate attention. Returning to my camp, I found it undifturbed, and then continued on to the extreme point of the promontory, where I faw a fcene, new and furprifing, which at first threw my fenses into fuch a tumult, that it was fome time before I could comprehend what was the matter; however, I foon accounted for the prodigious affemblage of crocodiles at this place, which exceeded every thing of the kind I had ever heard of.

How shall I express myself to as to convey an adequate idea of it to the reader, and at the fame time

time avoid railing fuspicions of my veracity. Should I fay, that the river (in this place) from fhore to shore, and perhaps near half a mile above and below me, appeared to be one folid bank of fifh, of various kinds, puffing through this narrow pals of St. Juan's into the little lake, on their return down the river, and that the alligators were in fuch incredible numbers, and fo clofe together from fhore to shore, that it would have been eafy to have walked acrofs on their heads, had the animals been harmlefs? What expressions can fufficiently declare the flocking scene that for some minutes continued, whill this mighty army of fifh were forcing the pais? During this attempt, thoulands, I may fay hundreds of thousands of them were caught and fwallowed by the devouring alligators. I have feen an alligator take up out of the water feveral great fifh at a time, and just fqueeze them betwixt his jaws, while the tails of the great trout flapped about his eyes and lips, ere he had fwallowed them. The horrid noife of their clofing jaws, their plunging amidst the broken banks of fish, and rifing with their prey fome feet upright above the water. the floods of water and blood rushing out of their mouths, and the clouds of vapour iffuing from their wide nostrils, were truly frightful. This scene continued at intervals during the night, as the fifh came to the pafs. After this fight, flocking and tremendous as it was. I found myfelf fomewhat eafier and more reconciled to my fituation; being convinced that their extraordinary affemblage here was owing to this annual feast of fish; and that they were fo well employed in their own element, that I had little occasion to fear their paying me a vifit.

Iť

It being now almost night, I returned to my camp, where I had left my fifh broiling, and my kettle of rice stewing; and having with me oil, pepper, and falt, and excellent oranges hanging in abundance over my head (a valuable fubftitute for vinegar) I fat down and regaled myfelf cheerfully. Having finished my repast, I rekindled my fire for light, and whilft I was revifing the notes of my paft day's journey, I was fuddenly roufed with a noife behind me toward the main land. I fprang up on my feet, and liftening, I diffinctly heard fome creature wading in the water of the ifthmus. I feized my gun, and went cautiously from my camp, directing my fteps towards the noife: when I had advanced about thirty yards, I halted behind a coppice of orange trees, and foon perceived two very large bears, which had made their way through the water, and had landed in the grove, about one hundred yards diftance from me, and were advancing towards me. I waited until they were within thirty yards of me: they there began to fnuff and look towards my camp: I fnapped my piece, but it flashed, on which they both turned about and gallopped off, plunging through the water and fwamp, never halting, as I suppose, until they reached fast land, as I could hear them leaping and plunging a long time. They did not prefume to return again, nor was I molefted by any other creature, except being occafionally awakened by the whooping of owls, fcreaming of bitterns, or the wood-rats running amongft the leaves.

The wood-rat is a very curious animal. It is not half the fize of the domeftic rat; of a dark brown or black colour; its tail flender and fhorter in proportion, and covered thinly with fhort hair. It It is fingular with refpect to its ingenuity and great labour in the conftruction of its habitation, which is a conical pyramid, about three or four feet high, conftructed with dry branches, which it collects with great labour and perfeverance, and piles up without any apparent order; yet they are fo interwoven with one another, that it would take a bear or wild cat fome time to pull one of these caftles to pieces, and allow the animals fufficient time to fecure a retreat with their young.

The noife of the crocodiles kept me awake the greater part of the night; but when I arofe in the morning, contrary to my expectations, there was perfect peace; very few of them to be feen, and those were alleep on the shore. Yet I was not able to fupprefs my fears and apprehenfions of being attacked by them in future; and indeed yesterday's combat with them, notwithstanding I came off in a manner victorious, or at least made a safe retreat. had left fufficient impreffion on my mind to damp my courage; and it feemed too much for one of my ftrength, being alone in a very fmall boat, to encounter fuch collected danger. To purfue my voyage up the river, and be obliged every evening to pals fuch dangerous defiles, appeared to me as perilous as running the gauntlet betwixt two rows of Indians armed with knives and firebrands. T however refolved to continue my voyage one day longer, if I poffibly could with fafety, and then return down the river, fhould I find the like difficulties to oppofe. Accordingly I got every thing on board, charged my gun, and fet fail cautioufly, along fhore. As I paffed by Battle lagoon, I began to tremble and keep a good look out; when fuddenly a huge alligator rufhed out of the reeds, and with

with a tremendous roar came up, and darted as fwift as an arrow under my boat, emerging upright on my lee quarter, with open jaws, and belching water and fmoke that fell upon me like rain in a I laid foundly about his head with my hurricane. club and beat him off; and after plunging and darting about my boat, he went off on a straight line through the water, feemingly with the rapidity of lightning, and entered the cape of the lagoon. I now employed my time to the very belt advantage in paddling clofe along fhore, but could not forbear looking now and then behind me, and prefently perceived one of them coming up again. The water of the river hereabouts was shoal and very clear : the monfter came up with the ufual roar and menaces, and paffed close by the fide of my boat, when I could diffinctly fee a young brood of alligators, to the number of one hundred or more, following after her in a long train. They kept close together in a column without ftraggling off to the . one fide or the other; the young appeared to be of an equal fize, about fifteen inches in length, almost black, with pale yellow transverse waved clouds or blotches, much like rattlefnakes in colour. I now loft fight of my enemy again.

Still keeping clofe along fhore, on turning a point or projection of the river bank, at once I beheld a great number of hillocks or fmall pyramids, refembling hay-cocks, ranged like an encampment along the banks. They flood fifteen or twenty yards diftant from the water, on a high marfh, about four feet perpendicular above the water. I knew them to be the nefts of the crocodile, having had a defcription of them before; and now expected a furious and general attack, as I faw feveral large crocodiles

# NORTH AMERICA.

codiles fwimming abreaft of thefe buildings. Thefe nefts being fo great a curiofity to me, I was determined at all events immediately to land and examine them. Accordingly, I ran my bark on fhore at one of their landing-places, which was a fort of nick or little dock, from which afcended a floping path or road up to the edge of the meadow, where their nefts were; moft of them were deferted, and the great thick whitifh egg-fhells lay broken and fcattered upon the ground round about them.

The nefts or hillocks are of the form of an obtufe cone, four feet high and four or five feet in diameter at their bafes; they are conftructed with mud, grafs, and herbage. At first they lay a floor of this kind of tempered mortar on the ground, upon which they deposit a layer of eggs, and upon this a ftratum of mortar, feven or eight inches in thickness, and then another layer of eggs, and in this manner one ftratum upon another, nearly to the top. I believe they commonly lay from one to two hundred eggs in a neft : these are hatched, I fuppose, by the heat of the fun; and perhaps the vegetable fubftances mixed with the earth, being acted upon by the fun, may caufe a fmall degree of fermentation, and fo increase the heat in those hillocks. The ground for feveral acres about thefe nefts fhewed evident marks of a continual refort of alligators; the grafs was every where beaten down, hardly a blade or ftraw was left ftanding; whereas, all about, at a distance, it was five or fix feet high, and as thick as it could grow together. The female, as I imagine, carefully watches her own neft of eggs until they are all hatched; or perhaps while fhe is attending her own brood, fhe takes under her care and protection as many as the can get at one time, either

ther from her own particular neft or others: but certain it is, that the young are not left to fhift for themfelves; for I have had frequent opportunities of feeing the female alligator leading about the fhores her train of young ones, juft as a hen does her brood of chickens; and fhe is equally affiduous and courageous in defending the young, which are under her care, and providing for their fubfiftence; and when fhe is bafking upon the warm banks, with her brood around her, you may hear the young ones continually whining and barking, like young puppies. I believe but few of a brood live to the years of full growth and magnitude, as the old feed on the young as long as they can make prey of them.

The alligator when full grown is a very large and terrible creature, and of prodigious ftrength, activity, and fwiftnefs in the water. I have feen them twenty feet in length, and fome are fuppoled to be twenty-two or twenty-three feet. Their body is as large as that of a horfe; their fhape exactly refembles that of a lizard, except their tail, which is flat or cuneiform, being compressed on each fide, and gradually diminishing from the abdomen to the extremity, which, with the whole body is covered with horny plates or fquammæ, impenetrable when on the body of the live animal, even to a rifle-ball, except about their head and just behind their fore-legs or arms, where it is faid they are only vulnerable. The head of a full-grown one is about three feet, and the mouth opens nearly the fame length; their eyes are fmall in proportion and feem funk deep in the head, by means of the prominency of the brows; the noftrils are large, inflated and prominent on the top, fo that the head in the water refembles, at a diftance, a great chunk

chunk of wood floating about. Only the upper jaw moves, which they raife almost perpendicular, fo as to form a right angle with the lower one. In the fore-part of the upper jaw, on each fide, just under the noftrils, are two very large, thick, ftrong teeth or tusks, not very sharp, but rather the shape of a cone: these are as white as the finest polished ivory, and are not covered by any fkin or lips, and always in fight, which gives the creature a frightful appearance: in the lower jaw are holes opposite to these teeth, to receive them : when they clap their jaws together it caufes a furprifing noife, like that which is made by forcing a heavy plank with violence upon the ground, and may be heard at a great diftance.

But what is yet more furprifing to a ftranger, is the incredible loud and terrifying roar, which they are capable of making, efpecially in the fpring feafon, their breeding time. It most refembles very heavy distant thunder, not only fhaking the air and waters, but causing the earth to tremble; and when hundreds and thousands are roaring at the fame time, you can fcarcely be perfuaded, but that the whole globe is violently and dangerously agitated.

An old champion, who is perhaps abfolute fovereign of a little lake or lagoon (when fifty lefs than himfelf are obliged to content themfelves with fwelling and roaring in little coves round about) darts forth from the reedy coverts all at once, on the furface of the waters, in a right line; at first feemingly as rapid as lightning, but gradually more flowly until he arrives at the center of the lake, when he ftops. He now fwells himfelf by drawing in wind and water through his mouth, which caufes a loud fonorous

### TRAVELS IN

fonorous rattling in the throat for near a minute, but it is immediately forced out again through his mouth and noftrils, with a loud noife, brandifhing his tail in the air, and the vapour afcending from his noftrils like fmoke. At other times, when fwollen to an extent ready to burft, his head and tail lifted up, he fpins or twirls round on the furface of the water. He acts his part like an Indian chief when rehearfing his feats of war; and then retiring, the exhibition is continued by others who dare to ftep forth, and ftrive to excel each other, to gain the attention of the favourite female.

Having gratified my curiofity at this general breeding-place and nurfery of crocodiles, I continued my voyage up the river without being greatly difturbed by them. In my way I obferved iflets or floating fields of the bright green Piftia, decorated with other amphibious plants, as Senecio Jacobea, Perficaria amphibia, Coreupfis bidens, Hydrocotyle fluitans, and many others of lefs note.

The fwamps on the banks and iflands of the river are generally three or four feet above the furface of the water, and very level; the timber large and growing thinly, more fo than what is obferved to be in the fwamps below lake George; the black rich earth is covered with moderately tall, and very fucculent tender grafs, which when chewed is fweet and agreeable to the tafte, fomewhat like young fugarcane: it is a jointed decumbent grafs, fending out radiculæ at the joints into the earth, and fo fpreads itfelf, by creeping over its furface.

The large timber trees, which poffefs the low lands, are Acer rubrum, Ac. negundo, Ac. glaucum, Ulmus fylvatica, Fraxinus excelsior, Frax. aquatica, Ulmus fuberifer,

fuberifer, Gleditfia monosperma, Gledit. triacanthus, Diofpyros Virginica, Nyffa aquatica, Nyffa fylvatica, Juglans cinerea, Quercus dentata, Quercus phillos, Hopea tinctoria, Corypha palma, Mo-rus rubra, and many more. The palm grows on the edges of the banks, where they are raifed higher than the adjacent level ground, by the accumulation of fand, river-fhells, &c. I paffed along feveral miles by those rich swamps: the channels of the river which encircle the feveral fertile islands I had paffed, now uniting, formed one deep channel near three hundred yards over. The banks of the river on each fide began to rife, and prefent shelly bluffs, adorned by beautiful Orange groves, Laurels and Live Oaks. And now appeared in fight, a tree that claimed my whole attention : it was the Carica papaya, both male and female, which were in flower; and the latter both in flower and fruit, fome of which were ripe, as large, and of the form of a pear, and of a most charming appearance.

This admirable tree is certainly the most beautiful of any vegetable production I know of; the towering Laurel Magnolia, and exalted Palm, indeed exceed it in grandeur and magnificence, but not in elegance, delicacy, and gracefulnefs. It rifes erect to the height of fifteen or twenty feet, with a perfectly straight tapering stem, which is smooth and polifhed, of a bright afh colour, refembling leaf filver, curiously inferibed with the footsteps of the fallen leaves; and thefe veftiges are placed in a very regular uniform imbricated order, which has a fine effect, as if the little column were elegantly carved all over. Its perfectly fpherical top is formed of very large lobe-finuate leaves, fupported on very long footftalks; the lower leaves are the largest as well as their petioles the longest, and make K a graceful

#### TRAVELS IN .

a graceful fweep or flourifh, like the long f or the branches of a fconce candleftick. The ripe and green fruit are placed round about the ftem or trunk, from the lowermost leaves, where the ripe fruit are, and upwards almost to the top; the heart or inmost pithy part of the trunk is in a manner hollow, or at best confists of very thin porous medullæ or membranes. The tree very feldom branches or divides into limbs, I believe never unlefs the top is by accident broke off when very young: I faw one which had two tops or heads, the ftem of which divided near the earth. It is always green, ornamented at the fame time with flowers and fruit, which like figs come out fingly from the trunk or ftem.

After refting and refreshing myfelf in these delightful shades, I left them with reluctance. Embarking again after the fervid heats of the meridian fun was abated, for some time I passed by broken ridges of shelly high land, covered with groves of Live Oak, Palm, Olea Americana, and Orange trees; frequently observing floating issues and green fields of the Pistia near the shores of the river and lagoons.

Here is in this river and in the waters all over Florida, a very curious and handfome fpecies of birds; the people call them Snake Birds; I think I have feen paintings of them on the Chinefe fcreens and other India pictures: they feem to be a fpecies of cormorant or loon (Colymbus cauda elongata), but far more beautiful and delicately formed than any other fpecies that I have ever feen. The head and neck of this bird are extremely fmall and flender, the latter very long indeed, almost out of all proportion; the bill long, ftraight, and flender, tapering

tapering from its ball to a fharp point; all the upper fide, the abdomen and thighs, are as black and gloffy as a raven's, covered with feathers fo firm and elastic, that they in fome degree refemble fish-scales; the breast and upper part of the belly are covered with feathers of a cream colour; the tail is very long, of a deep black, and tipped with a filvery white, and when spread, represents an unfurled fan. They delight to fit in little peaceable communities, on the dry limbs of trees, hanging over the still waters, with their wings and tails expanded, I fuppofe to cool and air themfelves, when at the fame time they behold their images in the watery mirrour. At fuch times, when we approach them, they drop off the limbs into the water as if dead, and for a minute or two are not to be feen; when on a fudden, at a vaft diftance, their long flender head and neck only appear, and have very much the appearance of a fnake, and no other part of them is to be feen when fwimming in the water, except fometimes the tip end of their tail. In the heat of the day they are feen in great numbers, failing very high in the air, over lakes and rivers.

I doubt not but if this bird had been an inhabitant of the Tiber in Ovid's days, it would have furnished him with a subject for some beautiful and entertaining metamorphoses. I believe it feeds entirely on fish, for its flesh smells and tastes intolerably strong of it; it is fearcely to be eaten unless constrained by infufferable hunger.

I had now fwamps and marfhes on both fides of me; and evening coming on apace, I began to look out for high land to encamp on; but the extensive marfhes feemed to have no bounds, and it was almost dark when I found a tolerably fuitable place, K 2 and and at laft was confirained to take up with a narrow ftrip of high fhelly bank, on the weft fide. Great numbers of crocodiles were in fight on both fhores. I ran my bark on fhore at a perpendicular bank four or five feet above the water, juft by the roots and under the fpreading limbs of a great Live Oak : this appeared to have been an ancient camping place by Indians and ftrolling adventurers, from afh heaps and old rotten fire brands and chunks, fcattered about on the furface of the ground ; but was now evidently the harbour and landing place of fome fovereign alligator : there led up from it a deep beaten path or road, which was a convenient afcent.

I did not approve of my intended habitation from these circumstances; and no fooner had I landed and moored my canoe to the roots of the tree, than I faw a huge crocodile rifing up from the bottom close by me, who, when I perceived that I faw him, plunged down again under my veffel. This determined me to be on my guard, and in time to provide against a troublesome night. I took out of my boat every moveable, which I carried upon the bank; then chofe my lodging clofe to my canoe, under the fpreading Oak, as hereabouts only, the ground was open and clear of high grafs and bufhes, and confequently I had fome room to ftir and look round about. I then proceeded to collect firewood, which I found difficult to procure. Here were standing a few Orange trees. As for provisions, I had faved one or two barbecued trout, the remains of my last evening's collection, in tolerable good order, though the fultry heats of the day had injured them; yet by flewing them up afresh with the lively juice of Oranges, they ferved well enough for my fupper, as I had by this time but little relish or appetite

tite for my victuals; for conftant watching at night against the attacks of alligators, stinging of musquitoes and fultry heats of the day; together with the fatigues of working my bark, had almost deprived me of every defire but that of ending my troubles as fpeedily as poffible. I had the good fortune to collect together a fufficiency of dry flicks to keep up a light and fmoke, which I laid by me, and then fpread my fkins and blankets upon the ground, kindled up a little fire, and fupped before it was quite dark. The evening was however extremely pleafant; a brifk cool breeze fprang up, and the fkies were perfectly ferene, the ftars twink-ling with uncommon brilliancy. I ftretched myfelf along before my fire; having the river, my little harbour, and the ftern of my veffel in view; and now through fatigue and wearinefs I fell afleep. But this happy temporary release from cares and troubles I enjoyed but a few moments, when I was awakened and greatly furprifed, by the terrifying fcreams of Owls in the deep fwamps around me; and what increase my extreme mifery was the difficulty of getting quite awake, and yet hearing at the fame time fuch fcreaming and fhouting, which increafed and fpread every way for miles around, in dreadful peals vibrating through the dark extensive forests, meadows, and lakes. I could not after this furprife recover my former peaceable state and tranquillity of mind and repofe, during the long night; and I believe it was happy for me that I was awakened, for at that moment the crocodile was dashing my cance against the roots of the tree, endeavouring to get into her for the fifh, which I however prevented. Another time in the night I believe I narrowly escaped being dragged into the river by him; for when again through excellive fatigue I had fallen afleep,

# TRAVELS IN

afleep, but was again awakened by the fcreaming owl, I found the monfter on the top of the bank, his head towards me not above two yards distant; when ftarting up and feizing my fusee well loaded, which I always kept under my head in the night time, he drew back and plunged into the water. After this, I roufed up my fire, and kept a light during the remaining part of the night, being determined not to be caught napping fo again : indeed the mulquitoes alone would have been abundantly fufficient to keep any creature awake that poffeffed their perfect fenfes; but I was overcome and flupified with inceffant watching and labour. As foon as I difcovered the first figns of day-light, I arose, got all my effects and implements on board, and fet fail, proceeding upwards, hoping to give the mufqui-toes the flip, who were now, by the cool morning dews and breezes, driven to their shelter and hiding places. I was miltaken however in these conjectures, for great numbers of them, which had concealed themfelves in my boat, as foon as the fun arofe, began to revive, and fting me on my legs, which obliged me to land in order to get bushes to beat them out of their quarters.

It is very pleafing to obferve the banks of the river ornamented with hanging garlands, compofed of varieties of climbing vegetables, both fhrubs and plants, forming perpendicular green walls, with projecting jambs, pilafters, and deep apartments, twenty or thirty feet high, and completely covered with Glycine frutefcens, Glyc. apios, Vitis labrufca, Vitis vulpina, Rajana, Hedera quinquifolia, Hedera arborea, Eupatorium fcandens, Bignonia crucigera, and various fpecies of Convolvulus, particularly an amazing tall climber of this genus,

genus, or perhaps an Ipomea. This has a very large white flower, as big as a fmall funnel; its tube is five or fix inches in length, and not thicker than a pipe ftem; the leaves are alfo very large, oblong, and cordated, fometimes dentated or angled, near the infertion of the foot-ftalk; they are of a thin texture, and of a deep green colour. It is exceedingly curious to behold the Wild Squafh \* climbing over the lofty limbs of the trees; its yellow fruit, fomewhat of the fize and figure of a large orange, pendant from the extremities of the limbs over the water.

Towards noon, the fultry heats being intolerable, I put into fhore, at a middling high bank, five or fix feet above the furface of the river. This low fandy testaceous ridge along the river fide was but narrow : the furface light, black, and exceedingly fertile, producing very large venerable Live Oaks, Palms, and grand Magnolias, fcatteringly planted by nature. There being no underwood to prevent the play of the breezes from the river, it afforded a defirable retreat from the fun's heat. Immediately at the back of this narrow ridge, were deep wet fwamps, where ftood fome aftonishingly tall and fpreading Cypress trees. And now being weary and drowsy, I was induced to indulge and liften to the dictates of reafon and invitations to repole; which confenting to, after fecuring my boat and reconnoitering the ground, I fpread my blanket under the Oaks near my boat, on which I extended myfelf, where, falling to fleep, I instantaneously passed away the fultry hours of noon. What a blifsful tranquil repofe! Undifturbed I awoke, refreshed and strengthened; I cheerfully stepped on board again, and continued to afcend the river. The

\* Cucurbita peregrina.

afternoon

afternoon being cool and pleafant, and the trees very lofty on the higher western banks of the river, by keeping near that shore I passed under agreeable shades the remaining part of the day. During almost all this day's voyage, the banks of the river on both fhores were middling high, perpendicular, and washed by the brisk current : the shores were not lined with the green lawns of floating aquatics, and confequently not very commodious reforts or harbours for crocodiles; I therefore was not difturbed by them, and faw but few, but those were very large. I however did not like to lodge on those narrow ridges, invested by fuch dreary fwamps; and evening approaching, I began to be anxious for high land for a camping place. It was quite dark before I came up to a bluff, which I had in view a long time, over a very extensive point of meadows. I landed however at last, in the best manner I could, at a magnificent forest of Orange groves, Oaks, and Palms. I here, with little labour or difficulty, foon collected a fufficient quantity of dry wood : there was a pleafant vifta of grafs betwixt the grove and the edge of the river bank, which afforded a very convenient, open, airy encamping place, under the protection of fome fpreading Oaks.

This was a high perpendicular bluff, fronting more than one hundred yards on the river, the earth black, loofe, and fertile : it is a composition of riverfhells, fand, &c. At the back of it from the river, were open Pine forefts and favannas. I met with a circumftance here, that with fome, may be reckoned worthy of mentioning, fince it regards the monuments of the ancients. As I have already obferved, when I landed it was quite dark; and in collecting wood wood for my fire, ftrolling in the dark about the groves, I found the furface of the ground very uneven, by means of little mounts and ridges. In the morning I found I had taken up my lodging on the border of an ancient burying ground, containing fepulchres or tumuli of the Yamafees, who were here flain by the Creeks in the laft decifive battle, the Creeks having driven them into this point, between the doubling of the river, where few of them efcaped the fury of the conquerors. These graves occupied the whole grove, confifting of two or three acres of ground : there were near thirty of these cemeteries of the dead, nearly of an equal fize and form, being oblong, twenty feet in length, ten or twelve feet in width, and three or four feet high, now overgrown with orange trees, live oaks, laurel magnolias, red bays and other trees and fhrubs, composing dark and folemn fhades.

I here, for the first time fince I left the trading houfe, enjoyed a night of peaceful repose. I arofe, greatly refreshed and in good spirits, stepped on board my bark, and continued my voyage. After doubling the point, I passed by swamps and meadows on each fide of me. The river here is something more contracted within perpendicular banks; the land of an excellent quality, fertile, and producing prodigiously large timber and luxuriant herbage.

The air continued fultry, and fcarcely enough wind to flutter the leaves on the trees. The Eaftern coaft of the river now opens, and prefents to view ample plains, confifting of graffy marfhes and green meadows, and affords a profpect almost unlimited and extremely pleasing. The opposite shore exhibits a sublime contrast; a high bluff bearing magnificent forests of grand magnolia, glorious palms, palms, fruitful orange groves, live oaks, bays and other'trees. This grand elevation continues four or five hundred yards, defcribing a gentle curve on the river, ornamented by a fublime grove of palms, confifting of many hundreds of trees together; they entirely shade the ground under them. Above and helow the bluff, the grounds gradually defcend to the common level fwamps on the river: at the back of this eminence open to view expansive green meadows or favannas, in which are to be feen glittering ponds of water, furrounded at a great diftance by high open pine forefts and hommocks, and iflets of oaks and bays projecting into the favannas. After ranging about these folitary groves and peaceful fhades, I re-embarked and continued fome miles up the river, between elevated banks of the fwamps or low lands; when on the Eaft fhore, in a capacious cove or winding of the river, were pleafing floating fields of piftia; and in the bottom of this cove opened to view a large creek or branch of the river, which I knew to be the entrance to a beautiful lake, on the banks of which was the farm I was going to vifit, and which I defigned fhould be the laft extent of my voyage up the river.

About noon the weather became extremely fultry, not a breath of wind ftirring, hazy or cloudy, with very heavy diftant thunder, which was answered by the crocodiles, fure prefage of a ftorm,

Soon after afcending this branch of the river, on the right hand prefents itfelf to view a delightful little bluff, confifting chiefly of fhells, and covered with a dark grove of red cedar, Zanthoxylon and myrtle. I could not refift the temptation to ftop here, although the tremendous thunder all around the the hemifphere alarmed me greatly, having a large lake to crofs. From this grove appears to view an expansive and pleasing prospect. The beauteous long lake in front, about North East from me, its most distant East shores adorned with dark, high forests of stately trees; North and South almost endless green plains and meadows, embellished with issues of high, dark forests, where the pyramidal magnolia grandissora, palma elata, and shady oak, confpicuously tower.

Being heretofore fo clofely invefted by high forefts and deep fwamps of the great river, I was prevented from feeing the progrefs and increase of the approaching tempeft, the terrific appearance of which now at once confounded me. How purple and fiery appeared the tumultuous clouds, fwiftly afcending or darting from the horizon upwards! they feemed to oppofe and dash against each other; the fkies appeared ftreaked with blood or purple flame overhead, the flaming lightning freaming and darting about in every direction around, feemed to fill the world with fire; whilft the heavy thunder kept the earth in a conftant tremor. I had yet fome hopes of croffing the lake to the plantation in fight. On the oppofite fhore of the creek before me, and on the cape as we enter the lake, flood a large iflet or grove of oaks and palms. Here I intended to feek shelter and abide till the furv of the hurricane was overpast, if I found it too violent to permit me to crofs the lake. In confequence of this precipitate determination, I stepped into my boat and pushed off. What a dreadful rushing and roaring there was every where around me ! and to my utter confusion and aftonishment, I could not find from what particular quarter its ftrongeft current or direction

#### TRAVELS IN

tion came, whereby I might have a proper chance of taking measures for fecuring a harbour or running The high forefts behind me bent to the from it. blaft; and the flurdy limbs of the trees cracked. I had by this time got up abreaft of the grove or hommock : the hurricane close by, purfuing me, I found it dangerous and imprudent in the highest degree to put in here, as the groves were already torn up, and the fpreading limbs of the ancient live oaks were flying over my head, and carried about in the air as leaves and ftubble. I ran by and boldly entered the lake (being hurried in by a ftrong current, which feemed a prodigy, the violent wind driving the ftream of the creek back again into the lake), and as foon as poffible took shelter under the high reedy bank of the lake, and made fast my bark to the boughs of a low fhrubby Hickory, that leaned over the water. Such was the violence of the wind, that it raifed the waters on the oppofite fhores of the lake feveral feet perpendicular, and there was a rapid flow of water from the creek into it, which was contrary to its natural courfe. Such floods of rain fell during the fpace of half or three quarters of an hour, that my boat was filled, and I expected every moment when I should fee her fink to the bottom of the lake : and the violence of the wind kept the cable fo conftantly extended, that it was beyond my ability to get to My box which contained my books of fpeciher. mens and other collections, was floating about in her; and for a great part of the time the rain came down with fuch rapidity and fell in fuch quantities, that every object was totally obfcured, excepting the continual streams or rivers of lightning, pouring from the clouds. All feemed a frightful chaos, When the wind and rain abated, I was overjoyed to fee the face of nature again appear.

It

It took me an hour or more to clear the water out of my bark. I then croffed the lake before a brifk and favourable breeze (it was about a mile over), and landed fafely at the plantation.

When I arrived, my friend was affrighted to fee me, and immediately inquired of me in what manner I came there; fuppofing it impossible (until I had fhowed him my boat) that I could have arrived by water, through fo tremendous a hurricane.

Indeed I faw plainly that they were greatly terrified, having fuffered almost irreparable damages from the violence of the ftorm. All the buildings on the plantation, except his own dwelling-house, were laid almost flat to the ground, or the logs and roof rent afunder and twifted about; the manfionhouse shook and reeled over their heads. He had nearly one hundred acres of the Indigo plant almost ripe for the first cutting, which were nearly ruined; and feveral acres of very promifing fugar-cane, totally fpoiled for the feafon. The great live oaks which had been left standing about the fields, were torn to pieces, their limbs lying fcattered over the ground : and one very large one which ftood near his houfe torn down, which could not have been done by the united ftrength of a thoufand men. But what is incredible, in the midft of this devastation and ruin, providentially no lives were loft; although there were about fixty Negro flaves on the plantation, and most of them in their huts when the storm came on, yet they elcaped with their lives, though feveral were badly wounded.

I continued here three days: indeed it took most of the time of my abode with him, to dry my books and specimens of plants. But with attention and care care I faved the greatest number of them; though fome were naturally fo delicate and fragile, that it was impoffible to recover them. Here is a vaft body of land belonging to this eftate; of high ridges fit for the culture of corn, indigo, cotton, batatas, &c. and of low fwamps and marfhes, which when properly drained and tilled, would be fuitable for rice. Thefe rich low grounds, when drained and ridged, are as productive as the natural high land, and vaftly more durable, especially for fugar-cane, corn, and even indigo; but this branch of agriculture being more expensive, these rich lands are neglected, and the upland only is under culture. The farm is fituated on the East shore of the beautiful Long Lake, which is above two miles long, and near a mile broad. This lake communicates with the St. Juan, by the little river that I afcended, which is about one mile and an half in length, and thirty or forty yards wide. The river, as well as the lake, abounds with fifh and wild fowl of various kinds, and incredible numbers, efpecially during the winter feafon, when the geefe and ducks arrive here from the north.

New Smyrna\*, a pretty thriving town, is a colony of Creeks and Minorquines, eftablished by Mr. Turnbull, on the Musquito river, and very near its

\* New Smyrna is built on a high fhelly bluff, on the Weft bank of the South branch of Mufquito river, about ten miles above the capes of that river, which is about thirty miles North of Cape Canaveral, Lat. 28. I was there about ten years ago, when the furveyor run the lines or precincts of the colony, where there was neither habitation nor cleared field. It was then a famous orange grove, the upper or South promontory of a ridge, nearly half a mile wide, and firetching North about forty miles, to the head of the North branch of the Mufquito, to where the Tomoko river unites with it, nearly parallel to the fea coaft, and not above two miles acrofs to the fea beach. All this ridge was then one entire orange grove, with live oaks, magnolias, palms, and red bays, and others: I oblerved then, near where New Smyrna now frands, a fpacious Indian mount and avenue, which ftood near the banks of the river : the avenue ran on a firait line back, through the groves, acrofs the ridge, and terminated at the verge of natural favannas and ponds.

142

mouth;

### NORTH AMERICA.

mouth; it is about thirty miles over land from this farm.

My friend rode with me, about four miles diffance from the house, to shew me a vast fountain of warm, or rather hot mineral water, which isfued from a high ridge or bank on the river, in a great cove or bay, a few miles above the mouth of the creek which I afcended to the lake; it boils up with great force, forming immediately a vaft circular bafon, capacious enough for feveral shallops to ride in, and runs with rapidity into the river three or four hundred vards distance. This creek, which is formed instantly by this admirable fountain, is wide and deep enough for a floop to fail up into the bafon. The water is perfectly diaphanous, and here are continually a prodigious number and variety of fifh; they appear as plain as though lying on a table before your eyes, although many feet deep in the wa-This tepid water has a most difagreeable taste, ter. braffy and vitriolic, and very offenfive to the fmell, much like bilge water or the washings of a gun-barrel. and is fmelt at a great diftance. A pale bluifh or pearl coloured coagulum covers every inanimate fubstance that lies in the water, as logs, limbs of trees, &c. Alligators and gar were numerous in the bafon, even at the apertures where the ebullition emerges through the rocks; as alfo many other tribes of fifh. In the winter feafon feveral kinds of fifh and aquatic animals migrate to thefe warm foun-The forbidding tafte and fmell of thefe waters tains. feems to be owing to vitriolic and fulphureous fumes or vapours; and these being condensed, form this coagulum, which reprefents flakes of pearly clouds in the clear cerulean waters in the bason. A charming orange grove, with magnolias, oaks, and palms, half

143

half furrounded this vaft fountain. A delightful ftream of cool falubrious water iffues from the ridge, meandering along, and entering the creek just below the bafon. I returned in the evening, and next day fet off again down the river.

My hospitable friend, after supplying me with neceffaries, prevailed on me to accept of the company and affistance of his purveyor, one day's voyage down the river, whom I was to set on shore at a certain bluff, upwards of twenty miles below, but not above one third that distance by land; he was to be out in the forests one day, on a hunt for turkeys.

The current of the river being here confined within its perpendicular banks, ran brifkly down: we cheerfully defcended the grand river St. Juan, enjoying enchanting profpects.

Before night we reached the defined port, at a fpacious orange grove. Next morning we feparated, and I proceeded down the river. The profpects on either hand are now pleafing, and I view them at leifure, and without toil or dread.

Induced by the beautiful appearance of the green meadows, which open to the Eaftward, I determined not to pass this Elysium without a visit. Behold the loud, fonorous, watchful favanna cranes (grus pratensis) with musical clangor, in detached fquadrons. They fpread their light elastic fail: at first they move from the earth heavy and flow; they labour and beat the dense air; they form the line with wide extended wings, tip to tip; they all rife and fall together as one bird; now they mount aloft, gradually wheeling about; each fquadron performs its evolutions

144

#### NORTH AMERICA.

tion, encircling the expansive plains, observing each one its own orbit; then lowering fail, defcend on the verge of fome glittering lake; whilft other fquadrons, afcending aloft in fpiral circles, bound on interesting discoveries, wheel round and double the promontory, in the filver regions of the clouded skies, where, far from the fcope of eye, they carefully observe the verdant meadows on the borders of the East Lake; then contract their plumes and defcend to the earth, where, after resting a while on fome verdant eminence, near the flowery border of the lake, they, with dignified, yet flow, respectful steps, appproach the kindred band, confer, and treat for habitation; the bounds and precincts being fettled, they confederate and take possible.

There is inhabiting the low fhores and fwamps of this river and the lakes of Florida, as well as Georgia, a very curious bird\*, called by an Indian name (Époufkyca) which fignifies in our language the crying bird. I cannot determine what genus of European birds to join it with. It is about the fize of a large domefic hen : all the body, above and beneath, is of a dark lead colour, every feather edged or tipped with white, which makes the bird appear speckled on a near view; the eye is large and placed high on the head, which is very prominent; the bill or beak is five or fix inches in length, arched or bent gradually downwards, in that refpect to be compared to one half of a bent bow; it is large or thick near the bafe, compreffed on each fide, and flatted at top and beneath, which makes it appear four square for more than an inch, where the nostrils are placed, from whence, to their tips, both mandibles are round, gradually leffening or tapering to

\* Tantalus pictus.

their

their extremities, which are thicker for about half an inch than immediately above, by which the mandibles never fit quite clofe their whole length; the upper mandible is a fmall matter longer than the under; the bill is of a dufky green colour, more bright and yellowish about the base and angles of the mouth; the tail is very fhort, and the middle feather the longest; the others on each fide shorten gradually, and are of the colour of the reft of the bird, only fomewhat darker; the two fhortest or outermost feathers are perfectly white, which the bird has a faculty of flirting out on either fide, as quick as a flash of lightning, especially when he hears or fees any thing that diffurbs him, uttering at the fame instant an extreme harsh and loud thrick: his neck is long and flender; and his legs are also long and bare of feathers above the knee. like those of the bittern, and are black or of a dark lead colour.

There are two other fpecies of this genus, which agree in almost every particular with the above defcripion, except in fize and colour. The first \* of these I shall mention is a perfect white, except the prime guill feathers, which are as black as those of a crow; the bill and legs of a beautiful clear red, as alfo a space clear of feathers about the eyes. The other fpecies + is black on the upper fide, the breaft and belly white, and the legs and beak as white as Both thefe fpecies are about half the fize of fnow. They fly in large flocks or fquathe crying bird. drons, evening and morning, to and from their feeding place or roofts; both fpecies are called Spanish curlews: thefe and the crying bird feed chiefly on

\* Tantalus albus. Numinus albus. Cat.

† Tantalus verficolor. Numinus fuscus: Cat.

146

cray

## NORTH AMERICA.

tray fifh, whofe cells they probe, and with their ftrong pinching bills drag them out: all the three species are efteemed excellent food.

It is a pleafing fight at times of high winds and heavy thunder florms, to obferve the numerous fquadrons of thefe Spanish curlews driving to and fro, turning and tacking about, high up in the air, when by their various evolutions in the different and opposite currents of the wind high in the clouds, their filvery white plumage gleams and sparkles like the brightest crystal, reflecting the fun-beams that dart upon them between the dark clouds.

Since I have turned my observations upon the birds of this country, I shall notice another very fingular one, though already most curiously and exactly figured by Catefby, which feems to be nearly allied to those before mentioned; I mean the bird which he calls the wood pelican\*. This is a large bird, perhaps near three feet high when standing erect. The bill is very long and strong, bending with a moderate curve from the bafe to the tip; the upper mandible is the largest, and receives the edges of the nether one into its whole length; the edges are very fharp and firm; the whole of a dark ash or horn colour; the forehead round the bafe of the beak and fides of the head is bare of feathers, and of a dark greenish colour, in which space is placed the eyes, which are very large; the remainder of the head and neck is of a nut brown colour ; the back of a light bluifh grey ; upper part of the wings, breaft, and belly, almost white, with fome flight dashes of grey; the quillfeathers and tail, which are very fhort, are of a dark flate colour, almost black; the legs, which are very

\* Tantalus loculator. Linn.

long,

long, and bare of feathers a great length above the knees are of a dark dull greenifh colour: it has a fmall bag or pouch under its throat: it feeds on ferpents, young alligators, frogs, and other reptiles.

This folitary bird does not affociate in flocks, but is generally feen alone; commonly near the banks of great rivers, in vaft marshes or meadows, especially fuch as are caufed by inundations; and alfo in the vaft deferted rice plantations: he ftands alone on the topmost limb of tall dead cyprefs trees, his neck contracted or drawn in upon his fhoulders, and beak refting like a long fcythe upon his breaft : in this penfive pofture and folitary fituation, it looks extremely grave, forrowful, and melancholy, as if in the deepest thought. They are never seen on the falt fea coaft, and yet are never found at a great distance from it. I take this bird to be of a different genus from the tantalus, and perhaps it approaches the nearest to the Egyptian ibis of any other bird yet known.

There are two fpecies of vultures \* in thefe regions, I think not mentioned in hiftory: the first we shall defcribe is a beautiful bird, near the fize of a turkey buzzard +, but his wings are much shorter, and confequently he falls greatly below that admirable bird in fail. I shall call this bird the painted vulture. The bill is long and straight almost to the point, when it is hooked or bent suddenly down and sharp; the head and neck bare of feathers nearly down to the stomach, when the feathers begin to cover the skin, and foon become long and of a fost texture, forming a ruff or tippet, in which the bird by contracting his neck can hide that as

\* Vultur facra, ...." <

+ Vultur aurea.

well

well as his head; the bare fkin on the neck appears loofe and wrinkled, and is of a deep bright yellow colour ; intermixed with coral red ; the hinder part of the neck is nearly covered with fhort, ftiff hair; and the skin of this part of the neck is of a dun-purple colour, gradually becoming red as it approaches the yellow of the fides and fore part. The crown of the head is red; there are lobbed lappets of a reddifh orange colour, which lie on the bafe of the upper mandible. But what is fingular, a large portion of the ftomach hangs down on the breaft of the bird, in the likenels of a fack or half wallet, and feems to be a duplicature of the craw, which is naked and of a reddifh flesh colour; this is partly concealed by the feathers of the breast, unless when it is loaded with food (which is commonly, I believe, roafted reptiles), and then it appears prominent. The plumage of the bird is generally white or cream colour, except the quill feathers of the wings and two or three rows of the coverts, which are of a beautiful dark brown; the tail, which is large and white, is tipped with this dark brown or black; the legs and feet of a clear white; the eye is encircled with a gold coloured iris; the pupil black.

The Creeks or Muscogulges conftruct their royal ftandard of the tail feather of this bird, which is called by a name fignifying the eagle's tail: this they carry with them when they go to battle, but then it is painted with a zone of red within the brown tips; and in peaceable negociations it is difplayed new, clean, and white: this standard is held most facred by them on all occasions, and is constructed and ornamented with great ingenuity. These birds feldom appear but when the deferts are fet on fire (which happens almost every day throughout the year, in fome

fome part or other, by the Indians, for the purpofe of roufing the game, as alfo by the lightning :) when they are feen at a diftance foaring on the wing, gathering from every quarter, and gradually approaching the burnt plains, where they alight upon the ground yet fmoking with hot embers : they gather up the roafted ferpents, frogs, and lizards, filling their facks with them ; at this time a perfon may fhoot them at pleafure, they not being willing to quit the feaft, and indeed feeming to brave all danger.

The other fpecies may very properly be called the coped vulture, and is by the inhabitants called the carrion crow. As to bulk or weight, he is nearly equal to either of the others before mentioned. His wings are not long and fharp pointed, but broad and round at their extremities, having a clumfy appearance; the tail is remarkably fhort, which he fpreads like a little fan, when on the wing. They have a heavy laborious flight, flapping their wings, then fail a little and then flap their wings again, and fo on as if recovering themfelves when falling. The beak is very long and ftraight, until it makes a fudden hook at the point, in the manner of the other vultures. The whole bird is of a fable or mourning colour; the head and neck down to the breaft is bare of feathers, and the fkin wrinkled : this unfeathered skin is of a deep livid purple, appearing black and thinly fet with fhort black hair. He has a ruff or tippet of long foft feathers, like a collar, bearing on his breaft, in which he can conceal his neck and head at pleafure.

Having agreeably diverted away the intolerable heats of fultry noon in fruitful fragrant groves, with renewed vigour I again refume my fylvan pilgrimage.

The

# 150

# NORTH AMERICA.

The afternoon and evening moderately warm, and exceeding pleafant views from the river and its varied fhores. I paffed by Battle lagoon and the bluff, without much oppofition; but the crocodiles were already affembling in the pafs. Before night I came to, at a charming orange grove bluff, on the Eaft fide of the little lake; and after fixing my camp on a high open fituation, and collecting a plenty of dry wood for fuel, I had time to get fome fine trout for fupper, and joyfully return to my camp.

What a most beautiful creature is this fish before me! gliding to and fro, and figuring in the ftill clear waters, with his orient attendants and affociates : the yellow bream \* or fun fish. It is about eight inches in length, nearly of the fhape of the trout, but rather larger in proportion over the shoulders and breast: the mouth large, and the branchiostega opens wide; the whole fish is of a pale gold (or burnished brass) colour, darker on the back and upper fides; the fcales are of a proportionable fize, regularly placed, and every where variably powdered with red, ruflet, filver, blue, and green fpecks, fo laid on the fcales as to appear like real dust or opaque bodies, each apparent particle being fo projected by light and fhade, and the various attitudes of the fifh, as to deceive the fight; for in reality nothing can be of a more plain and polished surface than the scales and whole body of the fifh. The fins are of an orange colour : and, like all the fpecies of the bream, the ultimate angle of the branchioftega terminates by a little spatula, the extreme end of which represents a crescent of the fineft ultramarine blue, encircled with filver and

\* Cyprinus coronarius.

1.131

velvet

velvet black, like the eye in the feathers of a peacock's train. He is a fifh of prodigious ftrength and activity in the water; a warrior in a gilded coat of mail; and gives no reft or quarter to fmall fifh, which he preys upon. They are delicious food and in great abundance.

The orange grove is but narrow, betwixt the river banks and ancient Indian fields, where there are evident traces of the habitations of the ancients, furrounded with groves of live oak, laurel magnolia, zanthoxylon, liquidambar, and others.

How harmonious and foothing is this native fylvan mufic now at ftill evening! inexpreffibly tender are the refponfive cooings of the innocent dove, in the fragrant zanthoxylon groves, and the variable and tuneful warblings of the nonpareil, with the more fprightly and elevated ftrains of the blue linnet and golden icterus: this is indeed harmony, even amidft the inceffant croaking of the frogs: the fhades of filent night are made more cheerful, with the fhrill voice of the whip-poor-will \* and active mock-bird.

My fituation high and airy: a brifk and cool breeze fteadily and inceffantly paffing over the clear waters of the lake, and fluttering over me through the furrounding groves, wings its way to the moon-light favannas, while I repofe on my fweet and healthy couch of the foft tillandfia ufnea-adfeites, and the latter gloomy and ftill hours of night pafs rapidly away as it were in a moment. I arofe, ftrength-

\* Caprimulgus rufus, called chuck-will's-widow, from a fancied refemblance of his notes to thele words: it inhabits the maritime parts of Carolina and Florida, and is more than twice the fize of the night hawk or whip-poor-will.

. 27.3

ened and cheerful, in the morning. Having fome repairs to make in the tackle of my veffel, I paid my first attention to them; which being accomplished, my curiofity prompted me to penetrate the grove and view the illumined plains.

What a beautiful display of vegetation is here before me! feemingly unlimited in extent and variety: how the dew-drops twinkle and play upon the fight, trembling on the tips of the lucid, green favanna, fparkling as the gem that flames on the turban of the eastern prince. See the pearly tears rolling off the buds of the expanding Granadilla \*; behold the azure fields of cerulean Ixea! what can equal the rich golden flowers of the Canna lutea, which ornament the banks of yon ferpentine rivulet, meandering over the meadows; the almost endles varieties of the gay Phlox, that enamel the fwelling green banks, affociated with the purple Verbena corymbofa, Viola, pearly Gnaphalium, and filvery Perdicium? How fantaftical looks the libertine Clitoria, mantling the fhrubs, on the viftas skirting the groves! My morning excursion finished, I returned to my camp, breakfasted, then went on board my boat, gently defcended the noble river, and paffed by feveral openings of extensive plains and meadows, environing the east lake, charming bevond compare. At evening I came to at a good harbour, under the high banks of the river, and refted during the night amidst the fragrant groves, exposed to the constant breezes from the river: here I made ample collections of fpecimens and growing roots of curious vegetables, which kept me fully employed the greatest part of the day; and in the evening arrived at a charming fpot on the eaft

\* Paffiflora incarnata, called May-Apolo.

bank,

bank, which I had marked on my afcent up the river, where I made fome addition to my collections; and the next day I employed myfelf in the fame manner, putting into fhore frequently, at convenient places, which I had noticed; and in the evening arrived again at the upper flore, where I had the pleafure of finding my old friend, the trader, in good health and cheerful, and his affairs in a profperous way. There were alfo a fmall party of Indians here, who had lately arrived with their hunts to purchafe goods. I continued a few days at this poft, fearching its environs for curious vegetable productions, collecting feeds and planting growing roots in boxes, to be transported to the lower trading house.

Now, having procured neceffaries to accommodate me on my voyage down to the lower flore, I bid adieu to my old friend and benefactor, Mr. Job Wiggens, embarked alone on board my little fortunate veffel, and fet fail. I chofe to follow the eafternmost channel of the river to the Great Lake, becaufe it ran by high banks and bluffs of the eaftern main the greatest part of the distance, which afforded me an opportunity of observing a far greater variety of natural fubjects, than if I had taken the western or middle channel, which flowed through fwamps and marshes.

At evening I arrived at Cedar Point, my former fafe and pleafant harbour, at the eaft cape of the Great Lake, where I had noticed fome curious fhrubs and plants; here I refted, and on the fmooth and gentle current launch again into the little ocean of Lake George, meaning now, on my return, to coaft his weftern fhores in fearch of new beauties in the bounteous kingdom of Flora.

154

I was

I was however induced to deviate a little from my intended courfe, and touch at the inchanting little Ifle of Palms. This delightful fpot, planted by nature, is almost an entire grove of Palms, with a few pyramidal Magnolias, Live Oaks, golden Orange, and the animating Zanthoxylon. What a beautiful retreat is here! bleffed inviolated fpot of earth. rifing from the limpid waters of the lake : its fragrant groves and blooming lawns invefted and protected by encircling ranks of the Yucca gloriofa. A fascinating atmosphere furrounds this blisful garden; the balmy Lantana, ambrofial Citra, perfumed Crinum, perfpiring their mingled odours, wafted through Zanthoxylon groves. I at last broke away from the enchanting fpot, and ftepped on board my boat, hoifted fail, and foon approached the coaft of the main, at the cool eve of day: then traverfing a capacious femicircular cove of the lake, verged by low, extensive graffy meadows, I at length by dufk made a fafe harbour, in a little lagoon, on the fea fhore or strand of a bold fandy point, which defcended from the furf of the lake. This was a clean fandy beach, hard and firm by the beating furf, when the wind fets from the east coast. I drew up my light veffel on the floping fhore, that fhe might be fafe from the beating waves in cafe of a fudden ftorm of wind in the night. A few yards back the land was a little elevated, and overgrown with thickets of fhrubs and low trees, confifting chiefly of Zanthoxylon, Olea Americana, Ramnus frangula, Sideroxylon, Morus, Ptelea, Halefia, Querci, Myrica cerifera, and others. Thefe groves were but low, yet fufficiently high to fhelter me from the chilling dews; and being but a few yards diftance from my veffel, here I fixed my encampment. A brifk wind arifing from the lake, drove

drove away the clouds of mufquitoes into the thickets. I now, with difficulty and induftry, collected a fufficiency of dry wood to keep up a light during the night, and to roaft fome trout which I had eaught when defcending the river : their heads I flewed in the juice of Oranges, which, with boiled rice, afforded me a wholefome and delicious fupper : I hung the remainder of my broiled fifth on the fnags of fome fhrubs over my head. I at laft, after reconnoitring my habitation, returned, fpread abroad my fkins and blanket upon the clean fands by my fire fide, and betook myfelf to repofe.

How glorious the powerful fun, minister of the Most High in the rule and government of this earth, leaves our hemisphere, retiring from our fight beyond the western forests! I behold with gratitude his departing finiles, tinging the fleecy roleate clouds, now riding far away on the eastern horizon; behold they vanish from fight in the azure skies!

All now filent and peaceable, I fuddenly fell afleep. At midnight I awake; when, raifing my head erect, I find myfelf alone in the wildernefs of Florida, on the fhores of Lake George. Alone indeed, but under the care of the Almighty, and protected by the invifible hand of my guardian angel.

When quite awake, I ftarted at the heavy tread of fome animal; the dry limbs of trees upon the ground crack under his feet; the close fhrubby thickets part and bend under him as he rufnes off.

I rekindle my fleepy fire; lay in contact the exfoliated fmoaking brands damp with the dew of heaven.

156

The

The bright flame afcends and illuminates the ground and groves around me.

When looking up, I found my fifh carried off, though I had thought them fafe on the fhrubs, juit over my head; but their fcent, carried to a great diftance by the damp nocturnal breezes, I fuppofe were too powerful attractions to refift.

Perhaps it may not be time loft, to reft a while here, and reflect on the unexpected and unaccountable incident, which however pointed out to me an extraordinary deliverance or protection of my life, from the rapacious wolf that ftole my fifh from over my head.

How much eafier and more eligible might it have been for him to have leaped upon my breaft in the dead of fleep, and torn my throat, which would have inftantly deprived me of life, and then glutted his ftomach for the prefent with my warm blood, and dragged off my body, which would have made a feaft afterwards for him and his howling affociates ! I fay, would not this have been a wifer ftep, than to have made protracted and circular approaches, and then after, by chance, efpying the fifh over my head, with the greatest caution and filence rear up, and take them off the fnags one by one, then make off with them, and that fo cunningly as not to awaken me until he had fairly accomplished his purpose?

The morning being clear, I fat fail with a favourite breeze, coafting along the fhores; when on a fudden the waters became transparent, and discovered the fandy bottom, and the feveral nations of fish, passing and repassing each other. Following

lowing this courfe I was led to the cape of the little river, defcending from Six Mile Springs, and meandering fix miles from its fource through green meadows. I entered this pellucid ftream, failing over the heads of innumerable fquadrons of fifh, which, although many feet deep in the water, were diffinctly to be feen. I paffed by charming iflets of flourishing trees, as Palm, Red Bay, Afh, Maple, Nyffa, and others. As I approached the diftant high forest on the main, the river widened, floating fields of the green Piftia furrounded me, the rapid ftream winding through them. What an alluring fcene was now before me! A vast bason or little lake of crystal waters, half encircled by fwelling hills, clad with orange and odoriferous Illicium groves, the towering Magnolia, itfelf a grove, and the exalted Palm, as if confcious of their transcendant glories, toffed about their lofty heads, painting, with mutable shades, the green floating fields beneath. The focial prattling coot enrobed in blue, and the fqueeling water-hen, with wings half-expanded, tripped after each other over the watery mirrour.

I put in at an ancient landing-place, which is a floping afcent to a level graffy plain, an old Indian field. As I intended to make my moft confiderable collections at this place, I proceeded immediately to fix my encampment but a few yards from my fafe harbour, where I fecurely faftened my boat to a Live Oak which overfhadowed my port.

After collecting a good quantity of fire-wood, as it was about the middle of the afternoon, I refolved to reconnoitre the ground about my encampment. Having penetrated the groves next to me, I came to the open forefts, confifting of exceedingly

## NORTH AMERICA.

ingly tall straight Pines (Pinus Palustris) that stood at a confiderable diftance from each other, through which appeared at N. W. an almost unlimited plain of graffy favannas, embellished with a chain of shallow ponds, as far as the fight could reach. Here is a fpecies of Magnolia that affociates with the Gordonia lafianthus; it is a tall tree, fixty or eighty feet in heighth; the trunk straight; its head terminating in the form of a fharp cone; the leaves are oblong, lanceolate, of a fine deep green, and glaucous beneath; the flowers are large, pretty white and extremely fragrant; with respect to its flowers and leaves it differs very little from the Magnolia glauca. The filvery whiteness of the leaves of this tree had a striking and pleafing effect on the fight, as it flood amidst the dark green of the Quercus dentata, Nyffa fylvatica, Nyf. aquatica, Gordonia lafianthus, and many others of the fame hue. The tall afpiring Gordonia lafianthus, which now ftood in my view in all its fplendour, is every way deferving of our admiration. Its thick foliage, of a dark green colour, is flowered over with large milk-white fragrant bloffoms, on long flender elaftic penuncles, at the extremities of its numerous branches, from the bofom of the leaves, and renewed every morning; and that in fuch incredible profusion, that the tree appears filvered over with them, and the ground beneath covered with the fallen flowers. It at the fame time continually pulhes forth new twigs, with young buds on them; and in the winter and fpring, the third year's leaves, now partly concealed by the new and perfect ones, are gradually changing colour, from green to golden yellow, from that to a fcarlet, from fcarlet to crimion; and laftly to a brownifh purple, and then fall to '

159

to the ground. So that the Gordonia lafianthus may be faid to change and renew its garments every morning throughout the year; and every day appears with unfading luftre. And moreover, after the general flowering is past, there is a thin fucceffion of fcattering bloffoms to be feen, on fome parts of the tree, almost every day throughout the remaining months, until the floral feafon returns again. Its natural fituation, when growing, is on the edges of shallow ponds, or low wet grounds on rivers, in a fandy foil, the nearest to the water of any other tree, fo that in droughty feafons its long ferpentine roots which runs near or upon the furface of the earth, may reach into the water. When the tree has arrived to the period of perfect magnitude, it is fixty, eighty, or an hundred feet high, forming a pyramidal head. The wood of old trees when fawn into plank is defervedly admired in cabinet-work orfurniture; it has a cinnamon coloured ground, marbled and veined with many colours : the inner bark is used for dying a reddifh or forrel colour; it imparts this colour to wool, cotton, linen, and dreffed deer-fkins, and is highly efteemed by tanners.

The Zamia pumila, the Erythryna, corallodendrum, and the Cactus opunfia, grow here in great abundance and perfection. The first grows in the open pine forests, in tusts or clumps, a large conical strobile disclosing its large coral red fruit, which appears fingularly beautiful amidst the deep green fern-like pinnated leaves.

The Erythryna carollodendrum is fix or eight feet high; its prickly limbs ftride and wreath about with fingular freedom, and its spikes of crimfon flowers have a fine effect amidst the delicate foliage. The

The Cactus opuntia is very tall, erect, and larges. and strong enough to bear the weight of a man: fome are feven or eight feet high : the whole plant or tree feems to be formed of great oval compreffed leaves or articulations; those near the earth continually increase, magnify and indurate as the tree advances in years, and at length lofe the bright green colour and gloffy furface of their youth, acquiring a ligneous quality, with a whitish fcabrous cortex. Every part of the plant is nearly deftitute of aculea, or those fascicles of barbed briftles which are in fuch plenty on the common dwarf Indian Fig. The cochineal infects are feeding on the leaves. The female of this infect is very large and flefhy, covered with a fine white filk or cottony web, which feels always moift or dewy, and feems defigned by nature to protect them from the violent heat of the The males are very small in comparison to the fun. females, and but very few in number : they each have two oblong pellucid wings. The large polypetalous flowers are produced on the edges of the last year's leaves, are of a fine splendid yellow, and are fucceeded by very large pear-fhaped fruit, of a dark livid purple when ripe: its pulp is charged with a juice of a fine transparent crimfon colour, and has a cool pleafant tafte, fomewhat like that of a pomegranate. Soon after eating this fruit, the urine becomes of the fame crimfon colour, which very much furprifes and affrights a stranger, but is attended with no other ill confequence; on the contrary, it is effeemed wholefome, though powerfully diuretic.

On the left hand of those open forests and favannas, as we turn our eyes fouthward, fouth-west and west, we behold an endless wild defert, the upper stratum of the earth of which is a fine white fand, with small pebbles, and at fome distance ap-M pears

pears entirely covered with low trees and fhrubs of various kinds, and of equal heighth, as dwarf Sweet Bay; (Laurus Borbonia) Olea Americana, Morus rubra, Myrica cerifera, Ptelea, Æfculus pavia, Quercus Ilex, Q. glandifer, Q. maritima, foliis cuneiformibus obfolete trilobis minoribus, Q. pumila, Rhamnus frangula, Halefia diptera, & terraptera, Caffine, Ilex aquifolium, Callicarpa Johnfonia, Erythryna corallodendrum, Hibifcus, fpinifex, Zanthoxylon, Hopea tinctoria, Sideroxylum, with a multitude of other fhrubs, many of which were new to me, and fome of them admirably beautiful and fingular. One of them particularly engaged my notice, which, from its fructification, I took to be a species of Cacalia. It is an evergréen shrub, about fix or eight feet high; the leaves are generally fomewhat cuneiform, flefhy, and of a pale whitifh green, both furfaces being covered with a hoary pubefcence and veficulæ, that when preffed feels clammy, and emits an agreeable fcent; the afcendent branches terminate with large tufts of corymbes of rofe-coloured flowers, of the fame agreeable scent; these clusters of flowers, at a distance, look like a large Carnation or fringed Poppy flower (Syngenefia Polyg. Æqul. Linn.), Cacalia heterophylla, toliis cuneiformibus, carnofis, papil. vifcidis.

Here is alfo another fpecies of the fame genus, but it does not grow quite fo large; the leaves are fmaller, of yet duller green colour, and the flowers are of a pale rofe; they are both valuable evergreens.

The trees and fhrubs which cover these extensive wilds, are about five or fix feet high, and feem to be kept down by the annual firing of the deserts, rather than the barrenness of the foil, as I faw a few large Live Oaks, Mulberry trees and Hiccories. ries, which evidently have withftood the devouring flames. Thefe adjoining wild plains, forefts, and favannas, are fituated lower than the hilly groves on the banks of the lake and river; but what thould be the natural caufe of it I cannot even pretend to conjecture, unlefs one may fuppofe that those high hills, which we call bluffs, on the banks of this great river and its lakes, and which fupport those magnificent groves and high forefts, and are generally composed of shells and fand, were thrown up to their prefent height by the winds and waves. when the bed of the river was nearer the level of the prefent furface of the earth; but then, to reft upon fuch a supposition, would be admitting that the waters were heretofore in greater quantities than at this time, or that their prefent channels and receptacles are worn deeper into the earth.

I now directed my fteps towards my encampment, in a different direction. I feated myfelf upon a fwelling green knoll, at the head of the cryftal bason. Near me, on the left, was a point or projection of an entire grove of the aromatic Illicium Floridanum; on my right and all around behind me, was a fruitful Orange grove, with Palms and Magnolias interspersed; in front, just under my feet, was the inchanting and amazing cryftal fountain, which inceffantly threw up, from dark, rocky caverns below, tons of water every minute, forming a bason, capacious enough for large shallops to ride in, and a creek of four or five feet depth of water, and near twenty yards over, which meanders fix miles through green meadows, pouring its limpid waters into the great Lake George, where they feem to remain pure and unmixed. About twenty yards from the upper edge of the bason, M 2 and

and directly opposite to the mouth or outlet of the creek, is a continual and amazing ebullition, where the waters are thrown up in fuch abundance and amazing force, as to jet and fwell up two or three feet above the common furface: white fand and fmall particles of shells are thrown up with the waters, near to the top, when they diverge from the centre, fubfide with the expanding flood, and gently fink again, forming a large rim or funnel round about the aperture or mouth of the fountain, which is a vaft perforation through a bed of rocks, the ragged points of which are projected out on every fide. Thus far I know to be matter of real fact, and I have related it as near as I could conceive or express myfelf. But there are yet remaining fcenes inexpreffibly admirable and pleafing.

Behold, for inftance, a vaft circular expanse before you, the waters of which are fo extremely clear as to be absolutely diaphanous or transparent as the ether; the margin of the bason ornamented with a great variety of fruitful and floriferous trees, fhrubs and plants, the pendant golden Orange, dancing on the furface of the pellucid waters, the balmy air, vibrating with the melody of the merry birds, tenants of the encircling aromatic grove.

At the fame inftant innumerable bands of fifh are feen, fome clothed in the most brilliant colours; the voracious crocodile stretched along at full length, as the great trunk of a tree in fize; the devouring garsish, inimical trout, and all the varieties of gilded painted bream; the barbed catfish, dreaded sting-ray, state, and shounder, spotted bass, scheeps head and ominous drum; all in their sepatate bands and communities, with free and unfufpicious picious intercourfe performing their evolutions: there are no figns of enmity, no attempt to devour each other; the different bands feem peaceably and complaifantly to move a little afide, as it were to make room for others to pafs by.

But behold yet fomething far more admirable, fee whole armies defcending into an abyfs, into the mouth of the bubbling fountain : they difappear! are they gone for ever? is it real? I raife my eyes with terror and aftonifhment; I look down again to the fountain with anxiety, when behold them as it were emerging from the blue ether of another world, apparently at a vaft diftance; at their first appearance, no bigger than flies or minnows; now gradually enlarging, their brilliant colours begin to paint the fluid.

Now they come forward rapidly, and inftantly emerge, with the elaftic expanding column of cryftalline waters, into the circular bafon or funnel: fee now how gently they rife, fome upright, others obliquely, or feem to lie as it were on their fides, fuffering themfelves to be gently lifted or borne up by the expanding fluid towards the furface, failing or floating like butterflies in the cerulean ether; then again they as gently defcend, diverge and move off; when they rally, form again, and rejoin their kindred tribes.

This amazing and delightful fcene, though real, appears at first but as a piece of excellent painting; there feems no medium; you imagine the picture to be within a few inches of your eyes, and that you may without the last difficulty touch any one of the fish, or put your finger upon the crocodile's eye, when it really is twenty or thirty feet under water.

And

And although this paradife of fifh may feem to exhibit a just representation of the peaceable and happy flate of nature which exifted before the fall, yet in reality it is a mere representation; for the nature of the fish is the same as if they were in Lake George or the river; but here the water or element in which they live and move, is fo perfectly clear and transparent, it places them all on an equality with regard to their ability to injure or efcape from one another; (as all river fifh of prey, or fuch as feed upon each other, as well as the unwieldy crocodile, take their prey by furprife; fecreting themfelves under covert or in ambush, until an opportunity offers, when they rush fuddenly upon them:) but here is no covert, no ambush; here the trout freely paffes by the very nofe of the alligator. and laughs in his face, and the bream by the trout.

But what is really furprifing is, that the confcioufnefs of each other's fafety, or fome other latent caufe, fhould fo abfolutely alter their conduct, for here is not the leaft attempt made to injure or difturb one another.

The fun paffing below the horizon, and night approaching, I rofe from my feat, and proceeding on arrived at my camp, kindled my fire, fupped and repofed peaceably. Rifing early, I employed the fore part of the day in collecting fpecimens of growing roots and feeds. In the afternoon, I left thefe Elyfian fprings and the aromatic groves, and brifkly defcended the pellucid little river, re-entering the great lake. The wind being gentle and fair for Mount Royal, I hoifted fail, and fuccefsfully crofling the N. weft bay, about nine miles, came to at Rocky Point, the weft cape or promontory, as we enter the river defcending towards Mount Royal:

thefe rocks are horizontal flabs or flat maffes, rifing out of the lake two or three feet above its furface, and feem an aggregate composition or concrete of fand, shells, and calcareous cement, of a dark gray or dufky colour. The ftones are hard and firm enough for buildings, and ferve very well for light hand mill-ftones; and when calcined afford a coarfe lime: they lie in vaft horizontal maffes upon one another, from one to two or three feet in thickness, and are eafily feparated and broken to any fize or form, for the purpole of building. Rocky Point is an airy, cool, and delightful fituation, commanding a most ample and pleasing prospect of the lake and its environs; but here being no wood, I reembarked and failed down a little farther to the island in the bay, where I went on shore at a magnificent grove of Magnolias and Oranges, defirous of augmenting my collections. I arole early next morning, and after ranging the groves and favannas, returned, embarked again, and defcending, called at Mount Royal, where I enlarged my collections; and bidding adieu to the gentleman and lady who refided there, and who treated me with great hofpitality on my afcent up the river, arrived in the evening at the lower trading house.

CHAP.

# CHAP. VI.

ON my return from my voyage to the upper flore, I underflood from the trading company defigned for Cufcowilla, that they had been very active in their preparations, and would be ready to fet off in a few days. I therefore availed myfelf of the little time allowed me to fecure and preferve my collections, againft the arrival of the trading fchooner, which was hourly expected, that every thing might be in readinefs to be fhipped on board her, in cafe fhe fhould load again and return for Savanna during my abfence.

Every neceffary being now in readinefs, early on a fine morning we proceeded, attended by four men under the conduct of an old trader, whom Mr. M'Latche had delegated to treat with the Cowkeeper and other chiefs of Cufcowilla, on the fubject of reeftablifhing the trade, &c. agreeable to the late treaty of St. Augustine.

For the first four or five miles we travelled westward, over a perfectly level plain, which appeared before and on each fide of us, as a charming green meadow, thinly planted with low spreading Pine trees (P. palustris). The upper stratum of the earth is a fine white crystalline fand, the very upper furface of which being mixed or incorporated with the assessment of burnt vegetables, renders it of fufficient strength or fertility to clothe itself perfectly with a very great variety of graffes, herbage, and remarkably flow shrubs, together with a very dwarf, species of Palmetto (Corypha pumila stipit. ferratis). Of the low fhrubs, many were new to me and of a very pleafing appearance, particularly a fpecies of annona (annona incarna, floribus grandioribus paniculatis); this grows three, four, or five feet high, the leaves fomewhat cuneiform or broad lanceolate. attenuating down to the petiole, of a pale or light green colour, covered with a pubefcence or fhort fine down; the flowers very large, perfectly white and fweet fcented, many connected together on large loofe panicles or fpikes; the fruit of the fize and form of a fmall cucumber, the fkin or exterior furface fomewhat rimofe or fcabrous, containing a yellow pulp of the confiftence of a hard cuftard, and very delicious, wholefome food. This feems a variety, if not the fame that I first remarked, growing on the Alatamaha near Fort Barrington, Charlotia, and many other places in Georgia and East Florida; and I observed here in plenty, the very dwarf decumbent annona, with narrow leaves, and various flowers already noticed at Alatamaha (annona pigmæa). Here is alfo abundance of the beautiful little dwarf kalmia ciliata, already defcribed. The white berried empetrum, a very pretty evergreen, grows here on fomewhat higher and drier knolls, in large patches or clumps, affociated with olea Americana, feveral fpecies of dwarf querci (oaks), vaccinium, Gordonia lafianthus, Andromeda ferruginea, and a very curious and beautiful fhrub which feems allied to the rhododendron, caffine, rhamnus frangula, Andromeda nitida, &c. which being of a dark green foliage, diverfify and enliven the landscape : but what appears very extraordinary, is to behold here, depressed and degraded, the glorious pyramidal magnolia grandiflora, affociated amongst these vile dwarfs, and even some of them rifing above it, though not five feet high; yet ftill flowing

fhowing large, beautiful and expansive white fragrant bloffoms, and great heavy cones, on flender procumbent branches, fome even lying on the earth; the ravages of fire keep them down, as is evident from the vast excression tuberous roots, covering feveral feet of ground, from which these flender shoots fpring.

In fuch clumps and coverts are to be feen feveral kinds of birds, particularly a fpecies of jay (pica glandaria cerulea non criftata): they are generally of an azure blue colour, have no creft or tuft of feathers on the head, nor are they fo large as the great crefted blue jay of Virginia, but are equally clamorous. The towee birds (fringilla erythropthalma) are very numerous, as are a species of bluish grav butcher bird (lanius). Here were alfo lizards and fnakes. The lizards were of that fpecies called in Carolina, fcorpions: they are from five to fix inches in length, of a flender form; the tail in particular is very long and fmall: they are of a yellowish clay colour, varied with longitudinal lines or ftripes of a dufky brown colour, from head to tail : they are wholly covered with very fmall fquamæ, vibrate their tail, and dart forth and brandish their forked tongue after the manner of ferpents, when they are furprifed or in purfuit of their prey, which are fcarabei, locustæ, musci, and other infects; but I do not learn that their bite is poifonous, yet I have obferved cats to be fick foon after eating them, After paffing over this extensive, level, hard, wet favanna, we croffed a fine brook or rivulet; the water cool and pleafant; its banks adorned with varieties of trees and fhrubs, particularly the delicate cyrilla racemiflora, chionanthus, clethra, nyffa fylvatica, Andromeda nitida, Andromeda formofiffima : and here were great quantities of a very large

large and beautiful filix ofmunda, growing in great tufts or clumps. After leaving the rivulet, we paffed. over a wet, hard, level glade or down, covered with a fine fhort grafs, with abundance of low faw palmetto, and a few fhrubby pine trees, quercus nigra, quercus finuata or fcarlet oak : then the path defcends to a wet bay-gale; the ground a hard, fine, white fand, covered with black flush, which continues above two miles, when it gently rifes the higher fand hills, and directly after paffes through a fine grove of young long-leaved pines. The foil feemed here, loofe, brown, coarfe, fandy loam, though fer-The afcent of the hill, ornamented with a vatile. riety and profusion of herbaceous plants and graffes. particularly amaryllis atamafco, clitoria, phlox, ipomea, convolvulus, verbena corymbofa, ruellia, viola, &c. A magnificent grove of flately pines, fucceeding to the expansive wild plains we had a long time traverled, had a pleafing effect, roufing the faculties of the mind, awakening the imagination by its fublimity, and arrefting every active, inquifitive idea, by the variety of the scenery, and the solemn fymphony of the fleady Western breezes, playing inceffantly, rifing and falling through the thick and wavy foliage.

The pine groves paffed, we immediately find ourfelves on the entrance of the expansive airy pine forefts, on parallel chains of low fwelling mounds, called the Sand Hills; their afcent fo easy, as to be almost imperceptible to the progressive traveller; yet at a distant view before us in some degree exhibit the appearance of the mountainous swell of the ocean immediately after a tempest; but yet, as we approach them, they infensibly disappear, and feem to be lost; and we should be ready to conclude all

all to be a visionary scene, were it not for the sparkling ponds and lakes, which at the fame time gleam through the open forefts, before us and on every fide, retaining them in the eye, until we come up with them. And at last the imagination remains flattered and dubious, by their uniformity, being mostly circular or elliptical, and almost furrounded with expansive green meadows; and always a picturesque dark grove of live oak, magnolia, gordonia, and the fragrant orange, encircling a rocky shaded grotto of transparent water, on fome border of the pond or lake; which, without the aid of any poetic fable, one might naturally suppose to be the facred abode or temporary refidence of the guardian fpirit; but is actually the poffeffion and retreat of a thundering abfolute crocodile.

Arrived early in the evening at the Halfway pond, where we encamped and flayed all night. This lake fpreads itfelf in a fpacious meadow, beneath a chain of elevated fand hills: the fheet of water at this time was about three miles in circumference; the upper end, just under the hills, furrounded by a crefcent of dark groves, which fhaded a rocky grotto. Near this place was a floping green bank, terminating by a point of flat rocks, which projected into the lake, and formed one point of the crefcent that partly furrounded the valt grotto or bafon of transparent waters, which is called by the traders a fink-hole, a fingular kind of vortex or conduit, to the fubterranean receptacles of the waters; but though the waters of these ponds, in the fummer and dry feafons, evidently tend towards thefe finks, yet it is fo flowly and gradually, as to be almost imperceptible. There is always a meandering. meandering channel winding through the favannas or meadows, which receives the waters fpread over them, by feveral lateral fmaller branches, flowly conveying them along into the lake, and finally into the bason, and with them nations of the finny tribes.

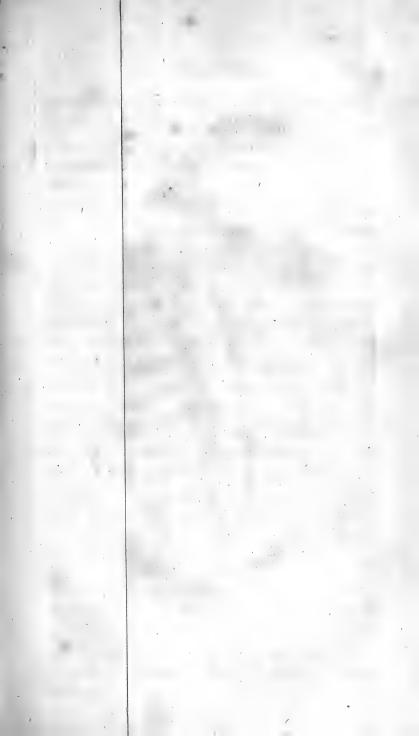

Just by the little cape of flat rocks, we fixed our encampment, where I enjoyed a comprehensive and varied scene, the verdant meadows spread abroad, charmingly decorated by green points of graffy lawns and dark promontories of wood-land, projecting into the green plains.

Behold now at ftill evening, the fun yet ftreaking the embroidered favannas, armies of fifh were purfuing their pilgrimage to the grand pellucid fountain; and when here arrived, all quiet and peaceable, encircling the little cerulean hemifphere, they defcend into the dark caverns of the earth; where, probably, they are feparated from each other, by innumerable paths, or fecret rocky avenues; and after encountering various obflacles, and beholding new and unthought of fcenes of pleafure and difguft, after many days abfence from the furface of the world emerge again from the dreary vaults, and appear exulting in gladnefs, and fporting in the transparent waters of fome far diftant lake.

The various kinds of fifh and amphibious animals, that inhabit thefe inland lakes and waters, may be mentioned here, as many of them here affembled, pafs and repafs in the lucid grotto: first the crocodile alligator: the great brown spotted garr, accoutred in an impenetrable coat of mail: this admirable animal may be termed a cannibal amongst fish, as fish are his prey; when fully grown he is from from five to fix feet in length, and of proportionable thicknefs, of a dufky brown colour, fpotted with black. The Indians make use of their tharp teeth to fcratch or bleed themselves with, and their pointed fcales to arm their arrows. This fish is fometimes eaten, and, to prepare them for food, they cover them whole in hot embers, where they bake them; the fkin with the fcales easily peels off, leaving the meat white and tender.

The mud fish is large, thick or round, and two feet in length; his meat white and tender, but foft and taftes of the mud, and is not much efteemed. The great devouring trout and catfifh are in abundance; the golden bream or funfish, the red bellied bream, the filver or white bream, the great yellow and great black or blue bream, alfo abound here. The laft of thefe mentioned, is a large, beautiful, and delicious fifh; when full grown they are nine inches in length, and five to fix inches in breadth; the whole body is of a dull blue or indigo colour, marked with transverse lifts or zones of a darker colour, fcatteringly powdered with fky blue, gold and red fpecks; fins and tail of a dark purple or livid flefh colour; the ultimate angle of the branchioftega forming a fpatula, the extreme end of which is broad and circular, terminating like the feather of the peacock's train, and having a brilliant fpot or eye like it, being delicately painted with a fringed border of a fire colour.

The great yellow or particoloured bream is in form and proportion much like the forementioned, but larger, from a foot to fifteen inches in length; his back from head to tail is of a dark clay and dufky colour, with transverse dashes or blotches, of reddish dull purple, or bluish, according to different exposures

R.4. P7 3 P'B7 15 No 19 cos Great Soft-shelled Tortoise? Hend of the Great Soft-shelled Tortoise

exposures to light; the fides and belly of a bright pale yellow; the belly faintly fained with vermillion red, infenfibly blended with the yellow on the fides, and all garnifhed with fiery, blue, green, gold and filver fpecks on the fcales; the branchioftega, is of a yellowish clay or straw colour; the lower edge or border next the opening of the gills, is near a quarter of an inch in breadth, of a fea green or marine blue; the ulterior angle protends backwards to a confiderable length, in the form of a spatula or feather, the extreme end dilated and circular, of a deep black or crow colour, reflecting green and blue, and bordered round with fiery red, fomewhat like red fealing wax, reprefenting a brilliant ruby on the fide of the fifh; the fins reddifh, edged with a dove colour: it is defervedly efteemed a most excellent fifh.

Here are, as well as in all the rivers, lakes, and ponds of Eaft Florida, the great foft fhelled tortoifes\*: they are very large when full grown, from twenty to thirty and forty pounds weight, extremely fat and delicious, but if eaten to excels are apt to purge people not accuftomed to eat their meat.

They are flat and very thin; two feet and a half in length, and eighteen inches in breadth acrofs the back; in form, appearance, and texture, very much refembling the fea turtle: the whole back fhell, except the vertebra or ridge, which is not at all prominent, and ribs on each fide, is foft or cartilaginous, and eafily reduced to a jelly when boiled; the anterior and pofterior extremities of the back fhell, appear to be emboffed with round,

\* Teftudo nafo cylindracio elongato, truncato.

horny

horny warts or tubercles; the belly or nether shell is but fmall and femicartilaginous, except a narrow crofs bar connecting it at each end with the back fhell, which is hard and offeous; the head is large and clubbed, of nearly an oval form ; the upper mandible, however, is protended forward, and truncated, fomewhat refembling a fwine's fnout, at the extreme end of which the noftrils are placed ; on each fide of the root or bafe of this probofcis are the eyes, which are large; the upper beak is hooked and fharp, like a hawk's bill; the lips and corners of the mouth large, tumid, wrinkled, and barbed with long, pointed warts, which he can project and contract at pleafure, which gives the creature a frightful and difagreeable countenance. They bury themfelves in the flushy bottoms of rivers and ponds, under the roots of flags and other aquatic herbage, leaving a hole or aperture just fufficient for their head to play through; to fuch places they withdraw themfelves when hungry, and there feize their prey by furprife, darting out their heads as quick as lightning, upon the unwary animal that unfortunately ftrolls within their reach: they can extend their neck to a furprifing length, which enables them to feize young fowl fwimming on the furface of the water above them, which they instantly drag down. They are feen to raife their heads above the furface of the water, in the depths of the lakes and rivers, and blow, caufing a faint puffing noife, fomewhat like a porpoife; probably this is for pastime, or to charge themselves with a proper supply of fresh air. They are carnivorous, feeding on any animal they can feize, particularly young ducks, frogs, and fifh.

We had a large and fat one ferved up for our fupper,

# NORTH AMERICA.

fupper, which I at first apprehended we had made a very extravagant waste of, not being able to confume one half of its flesh, though excellently well cooked : my companions, however, feemed regardlefs, being in the midst of plenty and variety, at any time within our reach, and to be obtained with little or no trouble or fatigue on our part; when herds of deer were feeding in the green meadows before us; flocks of turkeys walking in the groves around us, and myriads of fish, of the greatest variety and delicacy, fporting in the crystalline floods before our eyes.

The vultures and ravens, crouched on the crooked limbs of the lofty pines, at a little diftance from us, fharpening their beaks, in low debate, waiting to regale themfelves on the offals, after our departure from camp.

At the return of the morning, by the powerful influence of light, the pulfe of nature becomes more active, and the univerfal vibration of life infenfibly and irrefiftibly moves the wondrous machine. How cheerful and gay all nature appears! Hark! the mufical favanna cranes, ere the chirping fparrow flirts from his graffy couch, or the glorious fun gilds the tops of the pines, fpread their expansive wings, leave their lofty roofts, and repair to the ample plains.

From half-way pond, we proceed Westward, through the high forests of Cuscowilla.

The appearance of the earth for five or fix miles prefented nearly the fame fcenes as heretofore.

Now the fand ridges became higher, and their bafes proportionably more extensive; the favannas N and

and ponds more expansive; the fummits of the ridges more gravelly; here and there, heaps or piles of rocks, emerging out of the fand and gravel: thefe rocks are the fame fort of concrete of fand and shells as noticed at St. Juan's and the great lake. The vegetable productions nearly the same as already mentioned.

We gently descended again over fand ridges, croffed a rapid brook, ripling over the gravelly bed, hurrying the transparent waters into a vast and beautiful lake, through a fine fruitful orange grove, which magnificently adorns the banks of the lake to a great distance on each fide of the capes of the creek. This is a fine fituation for a capital town. Thefe waters are tributary to St. Juan's.

We alighted to refresh ourfelves, and adjust our packs. Here are evident figns and traces of a powerful fettlement of the ancients.

Sat off again, and continued travelling over a magnificent pine foreft, the ridges low, but their bafes extensive, with proportionable plains. The fteady breezes gently and continually rifing and falling, fill the high lonefome forefts with an awful reverential harmony, inexpreffibly fublime, and not to be enjoyed any where, but in thefe native wild Indian regions.

Croffing another large deep creek of St. Juan's, the country is a valt level plain, and the foil good for the diftance of four or five miles, though light and fandy, producing a foreft of flately pines and laurels, with fome others; and a vaft profusion of herbage, fuch as rudbeckia, helianthus, filphium, polymnia, ruellia, verbena, rhexea, convolvulus, fophora,

### NORTH AMERICA.

phora, glycine, vitia, clitorea, ipomea, urtica, falvia graveolens, viola, and many more. How cheerful and focial is the rural converfe of the various tribes of tree frogs, whilft they look to heaven for prolific fhowers! How harmonious the fhrill tuneful fongs of the wood thrufh, and the foothing love lays of the amorous cuckoo \*, feated in the cool leafy branches of the ftately magnolias and fhadowy elms, maples and liquidambar, together with gigantic fagus fylvatica, which fhade and perfume the fequeftered groves! How unexpected and enchanting the enjoyment, after traverfing a burning fandy defert!

Now, again, we behold the open pine forefts, and afcend the fandy hills, which continue for fome miles, then gently defcend again, when a level expansive favanna plain prefents itfelf to view, which, after entering and proceeding on, becomes wet and covered by a fine fhort grafs, with extensive parterres of the dwarf creeping palmetto, its flipes fharply toothed or ferrated, together with clumps of low fhrubs, as kalmia, Andromeda, annona pygmea, myrica cerifera, empetrum, vaccinium, and others.

We now afcend a little again, and pafs through a narrow pine foreft; when fuddenly opens to view a vaftly extensive and fedgy marsh, expanding Southerly like an open fan, feemingly as boundlefs as the great ocean; our road croffing the head of it, about three hundred yards over; the bottom here was hard fand, a foot or more under a fost muddy furface. The traders informed me, that these vastmats lie on the borders of a great lake, many miles in length, in magnitude exceeding Lake

> \* Cuculus Carolinienfis, N 2

George

780

George, and communicating with St. Juan's by a river \*; its confluence above the lower flore at the Little Lake.

Observed as we passed over the fand hills, the dens of the great land tortoife, called gopher: this ftrange creature remains yet undefcribed by hiftorians and travellers. The first figns of this animal's existence, as we travel Southerly, are immediately after we crofs the Savanna River. It is to be feen only on the high dry Sand hills. When arrived at its greatest magnitude, the upper shell is near eighteen inches in length, and ten or twelve inches in breadth'; the back is very high, and the fhell of a very hard bony fubstance, confisting of many regular compartments, united by futures, in the manner of the other species of tortoife, and covered with thin horny plates. The pether or belly shell is large, and regularly divided transversely into five parts: thefe compartments are not knit together like the futures of the skull, or the back shell of the tortoife, but adhere, or are connected together by a very ridgy horny cartilage, which ferves as hinges for him to fhut up his body within his fhell. at pleafure. The fore part of the belly shell towards its extremity is formed fomewhat like a fpade, extends forward near three inches, and is about an inch and an half in breadth; its extremity is a little bifid; the posterior division of the belly shell is likewife protended backwards confiderably, and is deeply bifurcated.

The legs and feet are covered with flat horny fquamæ; he feems to have no clefts in them or toes, but long flattifh nails or talons, fomewhat in

\* Great Ockli-Waha.

refemblance

refemblance to the nails of the human fingers, five on the fore feet; the hind legs or feet appear as if truncated, or as flumps of feet, armed all round with sharp, flattish strong nails, the number undetermined or irregular; the head is of a moderate fize; the upper mandible a little hooked, the edges hard and fharp; the eyes are large; the nofe picked; the nostrils near together and very minute; the general colour of the animal is a light ash or clay, and at a diftance, unlefs it is in motion, any one would difregard or overlook it as a ftone or an old stump. It is astonishing what a weight one of these creatures will bear; it will eafily carry any man standing on its back, on level ground. They form great and deep dens in the fand hills, cafting out incredible quantities of earth. They are efteemed excettent food. The eggs are larger than a musket ball, perfectly round, and the shell hard.

After croffing over this point or branch of the marshes, we entered a noble forest, the land level. and the foil fertile, being a loofe, dark brown, coarfe fandy loam, on a clay or marley foundation : the forest confisted of orange groves, overtopped by grand magnolias, palms, live oaks, juglans cinerea, morus rubra, fagus sylvatica, tilia, and liquidambar; with various kinds of fhrubs and herbaceous plants; particularly callicarpa, halefia, fambucus, zanthoxylon, ptelea, rhamnus frangula, rudbeckia, filphium, polymnia, indigo fera, sophora, falvia graveolens, We were cheerfully received in this hof-&c. pitable fhade, by various tribes of birds; their fprightly fongs feemed a prelude to the vicinity of human habitations. This magnificent grove was a wing of the valt forefts lying upon the coaft of the great and beautiful lake of Culcowilla, at no great diftance

diftance from us. Continuing eight or nine miles through this fublime foreft, we entered on an open foreft of lofty pines and oaks, on gently fwelling fand hills, and prefently faw the lake, its waters fparkling through the open groves. Near the path was a large artificial mound of earth, on a most charming, high fituation, fuppofed to be the work of the ancient Floridans or Yamafees; with other traces of an Indian town. Here were three or four Indian habitations; the women and children faluted us with cheerfulnefs and complaifance. After riding near a mile farther, we arrived at Cufcowilla, near the banks: a pretty brook of water ran through the town, and entered the lake juft by.

We were welcomed to the town, and conducted by the young men and maidens to the chief's houfe, which flood on an eminence, and was diftinguifhed from the reft by its fuperior magnitude, a large flag being hoifted on a high flaff at one corner. We immediately alighted : the chief, who is called the Cowkeeper, attended by feveral ancient men, came to us, and in a very free and fociable manner, fhook our hands, or rather arms, (a form of falutation peculiar to the American Indians) faying at the fame time, "You are come." We followed him to an apartment prepared for the reception of their guefts.

The pipe being filled, it is handed around; after which a large bowl, with what they call, "thin drink," is brought in and fet down on a fmall low table. In this bowl is a great wooden ladle; each perfon takes up in it as much as he pleafes, and after drinking until fatisfied, returns it again into the bowl, pufhing the handle towards the next perfon in the circle; and fo it goes round.

After

After the usual compliments and inquiries relative to our adventures, &c. the chief trader informed the Cowkeeper, in the prefence of his council or attendants, the purport of our busines, with which he expressed his fatisfaction. He was then informed what the nature of my errand was, and he received me with complaifance, giving me unlimited permisfion to travel over the country for the purpose of collecting flowers, medicinal plants, &c. faluting me by the name of Puc Pugex, or the Flower hunter, recommending me to the friendship and protection of his people.

The next day being agreed on to hold a council and transact the business of our embasily, we acquainted the chief with our intention of making our encampment on the borders of the great ALACHUA SAVANNA, and to return at the time appointed to town, to attend the council according to agreement.

Soon after we had fixed on the time and manner of proceeding on the further fettlement of the treaty, a confiderable number of Indians affembled around their chief, when the conversation turned to common and familiar topics.

The chief is a tall well made man, very affable and cheerful, about fixty years of age, his eyes lively and full of fire, his countenance manly and placid, yet ferocious, or what we call favage, his nofe aquiline, his drefs extremely fimple, but his head trimmed and ornamented in the true Creek mode. He has been a great warrior, having then attending him as flaves, many Yamafee captives, taken by himfelf when young. They were dreffed better than

than he, and ferved and waited upon him with figns of the most abject fear. The manners and customs of the Alachuas, and most of the lower Creeks or Siminoles, appear evidently tinctured with Spanish civilization. Their religious and civil ulages manifeft a predilection for the Spanish customs. There are feveral Christians among them, many of whom wear little filver crucifixes, affixed to a wampum collar round their necks, or fufpended by a fmall chain upon their breaft. These are faid to be baptized; and notwithstanding most of them speak and understand Spanish, yet they have been the most bitter and formidable Indian enemies the Spaniards ever had. The flaves, both male and female, are permitted to marry amongst them: their children are free and confidered in every refpect equal to themfelves; but the parents continue in a flate of flavery as long as they live.

In obferving thefe flaves, we behold at once, in their countenance and manners, the ftriking contraft betwixt a flate of freedom and flavery. They are the tameft, the most abject creatures that we can possibly imagine: mild, peaceable, and tractable, they feem to have no will or power to act but as directed by their masters; whils the free Indians, on the contrary, are bold, active, and clamorous. They differ as widely from each other as the bull from the ox.

The repaft is now brought in, confifting of venifon, flewed with bear's oil, fresh corn cakes, milk, and homony; and our drink, honey and water, very cool and agreeable. After partaking of this banquet, we took leave and departed for the great favanna.

We

We foon entered a level, graffy plain, interfperfed with low, fpreading, three-leaved Pine-trees, large patches of low fhrubs, confifting of Prinos glaber, low Myrica, Kalmia glauca, Andromedas of feveral species, and many other shrubs, with patches of Palmetto. We continued travelling through this favanna or bay-gale, near two miles, when the land afcends a little; we then entered a hommock or dark grove, confifting of various kinds of trees, as the Magnolia grandiflora, Corypha palma, Citrus Aurantium, Quercus fempervirens, Morus rubra, Ulmus fylvatica, Tilia, Juglans cinerea, Æsculus pavia, Liquidambar, Laurus Borbonia, Hopea tinctoria, Cercis, Cornus Florida, Halefia diptera, Halefia tetraptera, Olea Americana, Callicarpa, Andromeda arborea, Sideroxylon fericium, Sid. tenax. Vitis labrufca, Hedera arborea, Hedera guinquefolia, Rhamnus volubilis, Prunus Caroliniana (pr. flor, racemofis, foliis sempervirentibus, lato-lanceolatis, acuminatis, ferratis) Fagus fylvatica, Zanthoxylon. clava Herculis, Acer rubrum, Acer negundo, Fraxinus excelfior, with many others already mentioned. The land still gently rising, the foil fertile, loofe, loamy, and of a dark brown colour. This continues near a mile; when at once opens to view, the most fudden transition from darkness to light, that can poffibly be exhibited in a natural landfcape.

The extensive Alachua favanna is a level green plain, above fifteen miles over, fifty miles in circumference, and fcarcely a tree or bufh of any kind to be feen on it. It is encircled with high, floping hills, covered with waving forefts and fragrant Orange groves, rifing from an exuberantly fertile foil. The towering Magnolia grandiflora and transcendent

dent Palm, stand confpicuous amongst them. At the fame time are feen innumerable droves of cattle; the lordly bull, lowing cow, and fleek capricious heifer. The hills and groves re-echo their cheerful focial voices. Herds of fprightly deer, fquadrons of the beautiful fleet Siminole horfe, flocks of turkeys, civilized communities of the fonorous watchful crane, mix together, appearing happy and contented in the enjoyment of peace, till diffurbed and affrighted by the warrior man, Behold yonder, coming upon them through the darkened groves, fneakingly and unawares, the naked red warrior, invading the Elyfian fields and green plains of Alachua. At the terrible appear, ance of the painted, fearlefs, uncontrouled, and free Siminole, the peaceful innocent nations are at once thrown into diforder and difmay. See the different tribes and bands, how they draw towards each other! as it were deliberating upon the general good. Suddenly they fpeed off with their young in the centre; but the roebuck fears him not: here he lays himfelf down, bathes and flounces in the cool flood. The red warrior, whole plumed head flashes lightning, whoops in vain; his proud ambitious horfe strains and pants; the earth glides from under his feet, his flowing mane whiftles in the wind, as he comes up full of vain hopes. The bounding roe views his rapid approaches, rifes up, lifts aloft his antlered head, erects the white flag\*, and fetching a shrill whistle, fays to his fleet and free affociates, " follow ;" he bounds off, and in a few minutes distances his foe a mile; fuddenly he stops, turns about, and laughing fays, " how vain! go chafe meteors in the azure plains above, or hunt butterflies in the fields about your towns."

\* Alluding to his tail.

We

We approached the favanna at the fouth end by a narrow ifthmus of level ground, open to the light of day, and clear of trees or bufhes, and not greatly elevated above the common level, having on our right a fpacious meadow, embellished with a little lake, one verge of which was not very diftant from us; its fhore is a moderately high, circular bank, partly encircling a cove of the pond, in the form of a half moon; the water is clear and deep, and, at the distance of fome hundred yards, was a large floating field (if I may fo express myfelf) of the Nymphæa nelumbo, with their golden bloffoms wav ing to and fro on their lofty ftems. Beyond thefe fields of Nymphæa were spacious plains, encompassed by dark groves, opening to extensive Pine forest, other plains still appearing beyond them.

This little lake and furrounding meadows would have been alone fufficient to furprife and delight the traveller; but being placed fo near the great favanna, the attention is quickly drawn off, and wholly engaged in the contemplation of the unlimited, varied, and truly aftonifhing native wild fcenes of landfcape and perfpective, there exhibited : how is the mind agitated and bewildered, at being thus, as it were, placed on the borders of a new world ! On the first view of fuch an amazing difplay of the wifdom and power of the fupreme author of nature, the mind for a moment feems fufpended, and impreffed with awe.

This ifthmus being the common avenue or road of Indian travellers, we pitched our camp at a fmall diftance from it, on a rifing knoll near the verge of the favanna, under fome fpreading Live Oaks: this fituation was open and airy, and gave us an unbounded profpect over the adjacent plains. Dewy evening

evening now came on; the animating breezes. which cooled and tempered the meridian hours of this fultry feafon, now gently ceafed; the glorious fovereign of day, calling in his bright beaming emanations, left us in his absence to the milder government and protection of the filver queen of night, attended by millions of brilliant luminaries. The thundering alligator had ended his horrifying roar; the filver plumed gannet and ftork, the fage and folitary pelican of the wilderness, had already retired to their filent nocturnal habitations, in the neighbouring forefts; the fonorous favanna cranes, in well disciplined fquadrons, now rising from the earth, mounted aloft in fpiral circles, far above the denfe atmosphere of the humid plain; they again viewed the glorious fun, and the light of day ftill gleaming on their polifhed feathers, they fung their evening hymn, then in a straight line majestically defcended, and alighted on the towering Palms or lofty Pines, their fecure and peaceful lodging places. All around being ftill and filent, we repaired to reft,

Soon after fun-rife, a party of Indians on horfeback appeared upon the favanna, to collect together feveral herds of cattle which they drove along near our camp, towards the town. One of the party came up, and informed us, the cattle belonged to the chief of Cufcowilla; that he had ordered fome of the beft fteers of his droves to be flaughtered for a general feaft for the whole town, in compliment of our arrival, and pacific negociations.

The cattle were as large and fat as those of the rich grazing pastures of Moyomensing in Pennsylvania. The Indians drove off the lowing herds, and we foon followed them to town, in order to be at council at the appointed hour, leaving two young men of our party to protect our camp.

Upon

Upon our arrival we repaired to the public fquare or council-houfe, where the chiefs and fenators were already convened; the warriors and young men affembled foon after, the bufinefs being transfacted in public. As it was no more than a ratification of the late treaty of St. Augustine, with fome particular commercial stipulations, with respect to the citizens of Alachua, the negotiations foon terminated to the fatisfaction of both parties.

The banquet fucceeded; the ribs and choiceft fat pieces of the bullocks, excellently well barbecued, were brought into the apartment of the public fquare, conftructed and appointed for feafting; bowls and kettles of flewed flefh and broth were brought in for the next courfe, and with it a very fingular difh, the traders call it tripe foup; it is made of the belly or paunch of the beef, not overcleanfed of its contents, cut and minced pretty fine, and then made into a thin foup, feafoned well with falt and aromatic herbs; but the feafoning not quite flrong enough to extinguifh its original favour and fcent. This difh is greatly effeemed by the Indians, but is, in my judgment, the leaft agreeable they have amongft them.

The town of Cufcowilla, which is the capital of the Alachua tribe, contains about thirty habitations, each of which confifts of two houfes nearly the fame fize, about thirty feet in length, twelve feet wide, and about the fame in height. The door is placed midway on one fide or in the front. This houfe is divided equally, acrofs into two apartments, one of which is the cook room and common hall, and the other the lodging room. The ther houfe is nearly of the fame dimensions, ftanding about twenty yards from the dwelling houfe, its end fronting the

the door. This building is two ftories high, and constructed in a different manner. It is divided transverfely, as the other, but the end next the dwelling. house is open on three fides, supported by posts or pillars. It has an open loft or platform, the afcent to which is by a portable ftair or ladder: this is a pleafant, cool, airy fituation, and here the mafter or chief of the family retires to repofe in the hot feafons, and receives his guefts or vifitors. The other half of this building is clofed on all fides by notched logs; the loweft or ground part is a potatoe houfe, and the upper ftory over it a granary for corn and other provisions. Their houses are conftructed of a kind of frame. In the first place, strong corner pillars are fixed in the ground, with others fomewhat lefs, ranging on a line between; thefe are ftrengthened by crofs pieces of timber, and the whole with the roof is covered clofe with the bark of the Cyprefs tree. The dwelling ftands near the middle of a fquare yard, encompassed by a low bank, formed with the earth taken out of the yard, which is always carefully fwept. Their towns are clean, the inhabitants being particular in laying their filth at a proper diftance from their dwellings, which undoubtedly contributes to the healthinefs of their habitations.

The town ftands on the moft pleafant fituation that could be well imagined or defired, in an inland country; upon a high fwelling ridge of fand hills, within three or four hundred yards of a large and beautiful lake, the circular fhore of which continually wafhes a fandy beach, under a moderately high floping bank, terminated on one fide by extenfive forefts, confifting of Orange groves, overtopped with grand Magnolias, Palms, Poplar, Tilia.

# NORTH AMERICA.

lia, Live Oaks, and others already noticed; and the opposite point of the crefcent, gradually retires with hommocky projecting points, indenting the graffy marshes, and lastly terminates in infinite green plains and meadows, united with the fkies and waters of the lake. Such a natural landscape, fuch a rural scene, is not to be imitated by the united ingenuity and labour of man. At prefent the ground betwixt the town and the lake is adorned by an open grove of very tall Pine trees, which ftanding at a confiderable diftance from each other, admit a delightful profpect of the fparkling waters. The lake abounds with various excellent fish and wild fowl; there are incredible numbers of the latter, efpecially in the winter feafon, when they arrive here from the north to winter.

The Indians abdicated the ancient Alachua town on the borders of the favanna, and built here, calling the new town Cufcowilla: their reafons for removing their habitation were on account of its unhealthinefs, occafioned, as they fay, by the flench of the putrid fifh and reptiles in the fummer and autumn, driven on fhore by the alligators, and the exhalations from marfhes of the favanna, together with the perfecution of the mufquitoes.

They plant but little here about the town; only a fmall garden fpot at each habitation, confifting of a little Corn, Beans, Tobacco, Citruls, &c. Their plantation, which fupplies them with the chief of their vegetable provifions, fuch as Zea, Convolvulus batata, Cucurbita citrulus, Cuc. lagenaria, Cuc. pepo, Cuc. melopepo, Cuc. verrucofa, Dolichos varieties, &c. lies on the rich prolific lands bordering on the great Alachua favanna, about two miles diffance. This plantation is one common enclofure,

clofure, and is worked and tended by the whole community; yet every family has its particular part, according to its own appointment, marked off when planted; and this portion receives the common labour and affiftance until ripe, when each family gathers and depofits in its granary its own proper fhare, fetting apart a fmall gift or contribution for the public granary, which ftands in the centre of the plantation.

The youth, under the fupervifal of fome of their ancient people, are daily stationed in their fields, and are continually whooping and hallooing, to chafe away crows, jackdaws, black-birds, and fuch predatory animals; and the lads are armed with bows and arrows, and being trained up to it from their early youth, are fure at a mark, and in the courfe of the day load themfelves with fquirrels, birds. &c. The men in turn patrole the corn fields at night, to protect their provisions from the depredations of night rovers, as bears, raccoons, and deer; the two former being immoderately fond of young corn, when the grain is filled with a rich milk, as fweet and nourifhing as cream; and the deer are as fond of the Potatoe vines.

After the feaft was over, we returned to our encampment on the great favanna, towards the evening. Our companions, whom we left at the camp, were impatient for our return, having been out horfe hunting in the plains and groves during our abfence. They foon left us, on a vifit to the town, having there fome female friends, with whom they were anxious to renew their acquaintance. The Siminole girls are by no means defitute of charms to pleafe the rougher fex: the white traders are fully fenfible how greatly it is for their advantage to

### NORTH AMERICA.

to gain their affections and friendship in matters of trade and commerce; and if their love and efteem for each other is fincere, and upon principles of reciprocity, there are but few inftances of their neglecting or betraying the interefts and views of their temporary hufbands; they labour and watch confantly to promote their private interests, and detect and prevent any plots or evil defigns which may threaten their perfons, or operate against their trade or bufinefs.

In the cool of the evening I embraced the opportunity of making a folicary excursion round the adjacent lawns. Taking my fuzee with me, I foon came up to a little clump of fhrubs, upon a fwell-ing green knoll, where I obferved feveral large fnakes entwined together. I ftepped up near them; they appeared to be innocent and peaceable, having no inclination to ftrike at any thing, though I endeavoured to irritate them, in order to difcover their difposition; nor were they anxious to escape from me. This snake is about four feet in length, and as thick as a man's wrift; the upper fide of a dirty ash colour; the fquamæ large, ridged, and pointed; the belly or under fide of a reddifh dull flesh colour; the tail part not long, but flender, like most other innocent fnakes. They prey on rats, land frogs, young rabbits, birds, &c. I left them, continuing my progrefs and refearches, delighted with the ample profpects around and over the favanna.

Stopping again at a natural fhrubbery, on turning my eyes to fome flowering fhrubs, I obferved near my feet the furprifing glafs fnake (anguis fragilis). It feems as innocent and harmlefs as a worm. It is, when full grown, two feet and 2n

and half in length, and three fourths of an inch in thicknefs; the abdomen or body part is remarkably fhort, and it feems to be all sail, which, though long, gradually attenuates to its extremity, yet not fmall and flender as in fwitch fnakes. The colour and texture of the whole animal is exactly like bluish green glafs, which, together with its fragility, almost perfuades a stranger that it is in reality of that brittle fubstance : but it is only the tail part that breaks off, which it does like glass, by a very gentle stroke from a slender switch. Though it is quick and nimble in twifting about, yet it cannot run fast from one, but quickly fecrets itfelf at the bottom of the grafs or under leaves. It is a vulgar fable, that it is able to repair itself after being broken into feveral pieces; which pieces, common report fays, by a power or faculty in the animal, voluntarily approach each other, join and heal again. The fun now low, thot the pointed fhadows of the projecting promontories far on the fkirts of the lucid green plain : flocks of turkeys calling upon their ftrolling affociates, circumfpectly marched onward to the groves and high forefts, their nocturnal retreats. Dewy eve now arrived. I turned about and regained our encampment in good time.

The morning cool and pleafant, and the fkies ferene, we decamped, purfuing our progrefs round the Alachua favanna. Three of our companions feparating from us, went a-head, and we foon loft fight of them: they again parting on different excurfions, in queft of game and in fearch of their horfes, fome entered the furrounding groves and forefts, others ftruck off into the green plains. My companion, the old trader, and myfelf kept together, he being

#### NORTH AMERICA.

being the most intelligent and willing to oblige me. We coafted the green verge of the plain, under the furrounding hills, occafionally penetrating and croffing the projecting promontories as the pathway or conveniency dictated, to avoid the waters and mud which still continued deep and boggy near the fteep hills, in fpringy places; fo that when we came to fuch places, we found it convenient to afcend and coaft round the fides of the hills, or ftrike out a little into the favanna, to a moderately fwelling ridge, where the ground being dry, and a delightful green turf, was pleafant travelling; but then we were under the neceffity of fording creeks or rivulets, which are the conduits or drains of the shallow boggy ponds or moraffes just under the hills. This range or chain of moraffes continues round the fouth and fouth west border of the favanna, and appeared to me to be fed or occafioned by the great wet bay-gale or favanna Pine lands, which lie immediately back of the high hilly forefts on the great favanna, part of which we croffed in coming from Cufcowilla; which bottom is a flat, level, hard fand, lying between the fand ridge of Cufcowilla, and these eminences of the great favanna; and is a vast receptacle or refervoir of the rain waters, which, being defended from the active and powerful exhalations of the meridian fun, by the fhadow of the Pine trees, low fhrubs, and grafs, gradually filtering through the fand, drain through these hills, and prefent themfelves in innumerable little meandering rills, at the bafes of the fhady heights fronting the favanna.

Our progress this day was extremely pleafant, over the green turf, having in view numerous herds of cattle and deer, and fquadrons of horfe, peaceably browzing on the tender, fweet grafs, or ftrolling through  $O_2$ 

through the cool fragrant groves on the furrounding heights.

Befide the continued Orange groves, thefe heights abound with Palms, Magnolias, Red Bays, Liquidambar, and Fagus fylvatica of incredible magnitude, their trunks imitating the fhafts of vaft columns: we obferved Caffine, Prunus, Vitis labrufea, Rhamnus volubilis, and delightful groves of Æfculus pavia, and Prunus Caroliniana, a moft beautiful evergreen, decorated with its racemes of fweet, white bloffoms.

Paffing through a great extent of ancient Indian fields, now grown over with forefts of ftately trees, Orange groves, and luxuriant herbage, the old trader, my affociate, informed me it was the ancient Alachua, the capital of that famous and powerful tribe, who peopled the hills furrounding the favanna, when, in days of old, they could affemble by thousands at ball play and other juvenile diversions. and athletic exercifes, over those, then happy, fields and green plains. And there is no reason to doubt of his account being true, as almost every step we take over those fertile heights, discovers remains and traces of ancient human habitations and cultivation. It is the most elevated eminence upon the favanna; and here the hills defcend gradually to the favanna, by a range of gentle, graffy banks. Arriving at a fwelling green knoll, at fome diffance in the plains, near the banks of a pond, oppofite the old Alachua town, the place appointed for our meeting again together, it being near night, our affociates foon after joined us, where we lodged. Early next morning we continued our tour; one division of our company directing its course across the plains to the north coaft: my old companion, with

with myfelf in company, continued our former rout, coafting the favanna W. and N. W.; and by agreement we were all to meet again at night, at the E. end of the favanna.

We continued fome miles croffing over, from promontory to promontory, the most enchanting green coves and viftas, fcolloping and indenting the high coafts of the vaft plain. Obferving a company of wolves (lupus niger) under a few trees, about a quarter of a mile from thore, we rode up towards them; they observing our approach, fat on their hinder parts until we came nearly within fhot of them, when they trotted off towards the forefts, but ftopped again and looked at us, at about two hundred yards diftance : we then whooped, and made a feint to purfue them; when they feparated from each other, fome ftretching off into the plains, and others feeking covert in the groves on fhore. When we got to the trees, we observed they had been feeding on the carcafe of a horfe. The wolves of Florida are larger than a dog, and are perfectly black, except the females, which have a white fpot on the breaft; but they are not fo large as the wolves of Canada and Pennfylvania, which are of a vellowish brown colour. There were a number of vultures on the trees over the carcafe, who, as foon as the wolves ran off, immediately fettled down upon it; they were however held in reftraint and fubordination by the bald eagle (falco leucocephalus).

On our route near a long projected point of the coaft, we obferved a large flock of turkeys: at our approach they haftened to the groves. We foon gained the promontory. On the afcending hills were veftiges of an ancient Indian town, now overfhadowed

dowed with groves of the Orange, loaded with both green and ripe fruit, and embellished with their fragrant bloom, gratifying the tafte, the fight, and the fmell at the fame inftant. Leaving this delightful retreat, we foor came to the verge of the groves, when prefented to view a vaft verdant bay of the We difcovered a herd of deer feeding at favanna. a fmall distance; upon the fight of us they ran off, taking fhelter in the groves on the oppofite point or cape of this fpacious meadow. My companions being old expert hunters, quickly concerted a plan for their destruction. One of our company immediately ftruck off, obliquely croffing the meadow for the opposite groves, in order to intercept them, if they should continue their course up the forest, to the main; and we croffed straight over to the point, if poffible to keep them in fight, and watch their motions, knowing that they would make a ftand thereabouts, before they would attempt their laft escape. On drawing near the point, we flackened our pace, and cautioufly entered the groves; when we beheld them thoughtlefs and fecure, flouncing in a fparkling pond, in a green meadow or cove beyond the point; fome were lying down on their fides in the cool waters, whilft others were prancing like young kids; the young bucks in playfome fport, with their fharp horns hooking and fpurring the others, urging them to fplash the water.

I endeavoured to plead for their lives; but my old friend, though he was a fenfible rational and good fort of man, would not yield to my philofophy. He requefted me to mind our horfes, while he made his approaches, cautioufly gaining ground on them, from tree to tree, when they all fuddenly fprang up and herded together: a princely buck who headed the party, whiftled and bounded off;

his

his retinue followed; but unfortunately for their chief, he led them with prodigious fpeed out towards the favanna very near us, and when paffing by, the lucky old hunter fired and laid him proftrate upon the green turf, but a few yards from us. His affrighted followers at the inftant fprang off in every direction, ftreaming away like meteors or phantoms, and we quickly loft fight of them. He opened his body, took out the entrails, and placed the carcafe in the fork of a tree, caffing his frock or hunting fhirt over to protect it from the vultures and crows, who follow the hunter as regularly as his own fhade.

Our companions foon arrived. We fet forward again, enjoying the like fcenes we had already paft; obferved parties of Siminole horfes courfing over the plains, and frequently faw deer, turkeys, and wolves, but they knew their fafety here, keeping far enough out of our reach. The wary, fharp fighted crane, circumfpectly obferved our progrefs. We faw a female of them fitting on her neft, and the male, her mate, watchfully traverfing backwards and forwards, at a fmall diftance; they fuffered us to approach near them before they arole, when they fpread their wings, running and tipping the ground with their feet fome time, and then mounted aloft, foaring round and round over the neft. They fit upon only two eggs at a time, which are very large, long, and pointed at one end, of a pale afh colour, powdered or fpeckled with brown. The manner of forming their nefts and fitting is very fingular : choofing a tuffock, and there forming a rude heap of dry grafs, or fuch like materials, near as high as their body is from the ground, when fanding upon their feet, on the fummit of this thev

they form the neft of fine foft dry grafs. When they cover their eggs to hatch them, they fland over them, bearing their bodies and wings over the eggs.

We again came up to a long projecting point of the high forefts, beyond which opened to view an extensive graffy cove of the favanna, feveral miles in circuit. We croffed ftraight over from this promontory to the oppofite coaft, and on the way were conftrained to wade a mile or more through the water, though at a little diftance from us it appeared as a delightful meadow, the grafs growing through the water, the middle of which, however, when we came up, proved to be a large fpace of clear water almost deep enough to fwim our horfes; it being a large branch of the main creek which drains the favanna. After getting through this morafs, we arrived on a delightful, level, green meadow, as ufual, which continued about a mile, when we reached the firm land; and then gradually afcending, we alighted on a hard fandy beach, which exhibited evident figns of being washed by the waves of the favanna, when in the winter feafon it is all under water, and then prefents the appearance of a large lake. The coaft here is much lower than the opposite fide, which we had left behind us, and rifes from the meadows with a gradual floping afcent, covered fcatteringly with low fpreading Live Oaks, fhort Palms, Zanthoxylon, Laurus Borbonia, Caffine, Sideroxylon, Quercus nigra, Q. finuata, and others; all leaning from the bleak winds that opprefs them. About one hundred yards back from this beach, the fand hills gradually rife, and the open Pine forefts appear. We coafted a mile or two along the beach, then doubled a promontory of high forefts, and foon after came to a fwift running brook of clear

clear water, rolling over gravel and white fand, which being brought along with it, in its defcent down the fteeper fandy beach, formed an eafy fwelling bank or bar. The waters foread greatly at this place, exhibiting a shallow glittering sheet of clear water, but just fufficient continually to cover the clear gravelly bed, and feemed to be funk a little below the common furface of the beach. This ftream, however, is foon feparated into a number of rivulets, by fmall fandy and gravelly ridges; and the waters are finally ftolen away from the fight, by a charming green meadow, but again fecretly uniting under the tall grafs, form a little creek, meandering through the turfy plain, marking its course by reeds and rufhes, which fpring up from its banks, joining the main creek that runs through the favanna, and at length delivers the water into the Great Sink. Proceeding about a mile farther, we came up to and croffed another brook larger than the former, which exhibited the like delightful appearance. We next paffed over a level green lawn, a cove of the favanna, and arrived at a hilly grove. We alighted in a pleafant vifta, turning our horfes to graze while we amufed ourfelves with exploring the borders of the Great Sink. In this place a group. of rocky hills almost furrounds a large bason, which is the general receptacle of the water, draining from every part of the vast favanna, by lateral conduits, winding about, and one after another joining the main creek or general conductor, which at length delivers them into this fink ; where they defcend by flow degrees, through rocky caverns, into the bowels of the earth, whence they are carried by fecret fubterraneous channels into other receptacles and bafons.

201

We

We alcended a collection of eminences, covered with dark groves, which is one point of the crefcent that partly encircles the fink or bason, open only on the fide next the favanna, where it is joined to the great channel or general conductor of the waters. From this point over to the opposite point of the crefcent (which is a fimilar high rocky promontory) is about one hundred yards, forming a vast semicircular cove or bafon, the hills encircling it rifingvery fleep fifty or fixty feet, high, rocky, perpendicular and bare of earth next the waters of the ba-Thefe hills, from the top of the perpendicular. fon. fluted, excavated walls of rock, flant off moderately up to their fummits, and are covered with a very fertile, loofe, black earth, which nourifhes and fupports a dark grove of very large trees, varieties of fhrubs and herbaceous plants. These high forest trees furrounding the bason, by their great height and fpread, fo effectually shade the waters, that coming fuddenly from the open plains, we feem at once shut up in darkness, and the waters appear black, yet are clear. When we afcend the top of the hills, we perceive the ground to be uneven, by round fwelling points and corresponding hollows, overfpread with gloomy fhade, occafioned by the tall and fpreading trees, fuch as live oak, morus rubra, zanthoxylon, fapindus, liquidambar, tilia, laurus borbonia, quercus dentata, juglans cinerea, and others, together with orange trees of remarkable magnitude and very fruitful. But that which is most fingular and to me unaccountable, is the infundibuliform cavities, even on the top of these high hills, fome twenty, thirty, and forty yards acrofs, at their fuperficial rims exactly circular, as if ftruck with a compass, floping gradually inwards to a point at bottom,

tom, forming an inverted cone, or like the upper wide part of a funnel: the perpendicular depth of them from the common furface is various, fome defcending twenty feet deep, others almost to the bed of rocks, which forms the foundation or nuclus of the hills, and indeed of the whole country of East Florida: fome of them feem to be nearly filled up with earth, fwept in from the common furface, but retain the fame uniformity; though fometimes fo clofe together as to be broken one into another. But as I shall have occasion to speak further of these finks in the earth hereafter, I turn my observation to other objects in view round about me. In and about the Great Sink are to be feen incredible numbers of crocodiles, fome of which are of an enormous fize, and view the paffenger with incredible impudence and avidity; and at this time they are fo abundant, that, if permitted by them, I could walk over any part of the bason and the river upon their heads, which flowly float and turn about like knotty chunks or logs of wood, except when they plunge or fhoot forward to beat off their affociates, prefling too clofe to each other, or taking up fish, which continually crowd in upon them from the river and creeks. draining from the favanna, especially the great trout, mudfish, catfish, and the various species of bream : the gar are rather too hard for their jaws and rough for their throats, especially here, where they have a fuperfluous plenty and variety of those that are every way preferable : befides, the gar being, like themfelves, a warlike voracious creature, they feem to be in league or confederacy together, to enflave and devour the numerous defenceless tribes.

It is aftonishing and incredible, perhaps, I may fay, to relate what unspeakable numbers of fish re-

pair

pair to this fatal fountain or receptacle, during the latter fummer feafon and autumn, when the powerful fun beams have evaporated the waters off the favanna; where those who are fo fortunate as to eftect a retreat into the conductor, and escape the devouring jaws of the fearful alligator and armed gar, defcend into the earth, through the wells and cavities or vaft perforations of the rocks, and from thence are conducted and carried away, by fecret fubterranean conduits and gloomy vaults, to other diftant lakes and rivers. And it does not appear improbable, but that in fome future day this vaft favanna or lake of waters in the winter feafon will be difcovered to be in a great meafure filled with its finny inhabitants, who are ftrangers or adventurers from other lakes, ponds, and rivers, by fubterraneous rivulets and communications to this rocky, dark door or outlet, whence they alcend to its furface, fpread over and people the winter lake, where they breed, increase, and continue as long as it is under water, or during pleafure, for they are at all feafons to be feen afcending and defcending through the rocks: but towards the autumn, when the waters have almost left the plains they then crowd to the fink in fuch multitudes, as at times to be feen preffing on in great banks into the bason, being urged by purfuing bands of alligators and gar, and when entering the great bafon or fink, are fuddenly fallen upon by another army of the fame devouring enemies, lying in wait for them. Thousands are driven on shore, where they perifh and rot in banks, which was evident at the time I was there, the ftench being intolerable, although then early in the fummer. There are three great doors or vent holes through the rocks in the fink, two near the centre and the other one near the rim, much higher up than the other two, which

# NORTH AMERICA.

which was confpicuous through the clear water. The beds of rocks lay in horizontal thick firata or laminæ, one over the other, where the fink holes or outlets are. Thefe rocks are perforated by perpendicular wells or tubes, four, five, and fix feet in diameter, exactly circular as the tube of a cannon or walled well; many of thefe are broken into one another, forming a great ragged orifice, appearing fluted by alternate jambs and femicircular perpendicular niches or excavations.

Having fatisfied my curiofity in viewing this extraordinary place and very wonderful work of nature, we repaired to our refting place, where we found our horfes and mounted again; one of the company parting from us for the buck that we had fhot and left in the fork of the tree. My friend, the old trader, led the fhortest way across the plain, after repaffing the wet morafs which had almost fwum our horfes in the morning. At evening we arrived at the place of our deftination, where our affociates foon after rejoined us with fome Indians, who were merry agreeable guefts as long as they staid. They were in full drefs and painted; but before dark they mounted their horfes, which were of the true Siminole breed, fet fpurs to them, uttering all at once a fhrill whoop, and went off for Cufcowilla.

Though the horned cattle and horfes bred in thefe meadows are large, fleek, fprightly, and as fat as can be in general, yet they are fubject to mortal difeafes. I obferved feveral of them dreadfully mortified, their thighs and haunches ulcerated, raw and bleeding, which, like a mortification or flow cancer, at length puts an end to their miferable exiftence. The traders and Indians call this difeafe

:205

eafe the water-rot or fcald, and fay it is occafioned by the warm waters of the favanna, during the heats of fummer and autumn, when these creatures wade deep to feed on the water-grafs, which they are immoderately fond of; whereas the cattle which only feed and range in the high forests and pine favannas are clear of this diforder. A facrifice to intemperance and luxury.

We had heavy rains during the night, and though very warm, yet no thunder and very little wind. It cleared away in the morning, and the day was very pleafant. Sat off for the Eaft end of the favanna, collecting by the way and driving before us parties of horfes, the property of the traders; and next morning fet off on our return to the lower flore on St. John's, coafting the favanna yet a few miles, in expectation of finding the remainder of their horfes, though difappointed.

We at last bid adieu to the magnificent plains of Alachua, entered the pine forefts, and foon fell into the old Spanish highway, from St. Augustine across the ifthmus of Florida, to St. Mark's in the bay of Its course and diftance from E. to W. Apalache. is, from St. Augustine to Fort Picolata on the river St. Juan, twenty-feven miles; thence across the river to the Poopoa Fort, three miles; thence to the Alachua Savanna, forty-five miles; thence to Talahafochte on the river Little St. Juan, feventyfive miles ; thence down this river to St. Mark's, thirty miles: the whole diftance from St. Augustine to St. Mark's, one hundred and eighty miles. But this road having been unfrequented for many years paft, fince the Creeks fubdued the remnant tribes of the ancient Floridans, and drove the Spaniards from their fettlements in East Florida into St. Augustine.

guftine, which effectually cut off their communication between that garrifon and St. Mark's; this ancient highway is grown up in many places with trees and fhrubs; but yet has left fo deep a track on the furface of the earth, that it may be traced for ages yet to come.

Leaving the highway on our left hand, we ascended a fandy ridge, thinly planted by nature with ftately pines and oaks, of the latter genus particularly q. finuata, f. flammula, q. nigra, q. rubra. Paffed by an Indian village fituated on this high airy fand ridge, confifting of four or five habitations; none of the people were at home, they were out at their hunting camps; we observed plenty of corn in their cribs. Following a hunting path eight or nine miles, through a vaft pine foreft and graffy favanna, well timbered, the ground covered with a charming carpet of various flowering plants, came to a large creek of excellent water, and here we found the encampment of the Indians, the inhabitants of the little town we had paffed; we faw their women and children, the men being out hunting. The women prefented themfelves to our view as we came up, at the door of their tents, veiled in their mantle, modeftly flowing their faces, when we faluted them. Towards the evening we fell into the old trading path, and before night came to camp at the Half way Pond. Next morning, after collecting together the horfes, fome of which had strolled away at a great distance, we purfued our journey, and in the evening arrived at the trading houfe on St. Juan's, from a fuccefsful and pleafant tour.

On my return to the ftore on St. Juan's the trading fchooner was there; but as the was not to return

return to Georgia until the autumn, I found I had time to purfue my travels in Florida, and might at leifure plan my excursions to collect feeds and roots in boxes, &c.

At this time the talks (or meffages between the Indians and white people) were perfectly peaceable and friendly, both with the Lower Creeks and the Nation or Upper Creeks. Parties of Indians were coming in every day with their hunts; indeed the Mufcogulges or Upper Creeks very feldom difturb us. Bad talks from the Nation are always very ferious affairs, and to the utmost degree alarming to the white inhabitants.

The Muscogulges are under a more strict government or regular civilization than the Indians in ge-They lie near their potent and declared neral. enemy, the Chactaws. Their country having a vaft frontier, naturally acceffible and open to the incurfions of their enemies on all fides, they find themfelves under the neceffity of affociating in large populous towns, and thefe towns as near together as convenient, that they may be enabled to fuccour and defend one another in cafe of fudden invafion. This confequently occasions deer and bear to be fcarce and difficult to procure, which obliges them to be vigilant and industrious; this naturally begets care and ferious attention, which we may suppose in some degree forms their natural disposition and manners, and gives them that air of dignified gravity, fo ftrikingly characteristic in their aged people, and that fteadinets, just and cheerful reverence in the middle aged and youth, which fits fo eafy upon them, and appears fo natural. For, however strange it may appear to us, the fame moral duties which with us form

form the amiable, virtuous character, fo difficult to maintain, there, without compulsion or visible reftraint, operates like inftinct, with a furprising harmony and natural ease, infomuch that it feems impossible for them to act out of the common high road to virtue.

We will now take a view of the Lower Creeks or Siminoles, and the natural difposition which characterifes this people; when, from the striking contrast, the philosopher may approve or disapprove, as he may think proper, from the judgment and opinion given by different men.

The Siminoles are but a weak people with refpect All of them, I fuppofe, would not be to numbers. fufficient to people one of the towns in the Muscogulge; for inftance, the Uches on the main branch of the Apalachucla river, which alone contains near two thousand inhabitants. Yet this handful of people poffeffes a vaft territory; all Eaft Florida and the greateft part of Weft Florida, which being naturally cut and divided into thousands of islets, knolls, and eminences, by the innumerable rivers, lakes, fwamps, vaft favannas and ponds, form fo many fecure retreats and temporary dwelling places, that effectually guard them from any fudden invafions or attacks from their enemies; and being fuch a fwampy, hommocky country, furnishes fuch a plenty and variety of fupplies for the nourifhment of varieties of animals, that I can venture to affert, that no part of the globe fo abounds with wild game or creatures fit for the food of man.

Thus they enjoy a fuperabundance of the neceffaries and conveniencies of life, with the fecurity of perfon and property, the two great concerns of P mankind

mankind. The hides of deer, bears, tigers and wolves, together with honey, wax and other productions of the country, purchase their clothing, equipage, and domeftic utenfils from the whites. They feem to be free from want or defires. No cruel enemy to dread; nothing to give them difquietude, but the gradual encroachments of the white people. Thus contented and undiffurbed, they appear as blithe and free as the birds of the air, and like them as volatile and active, tuneful and vociferous. The vifage, action, and deportment of the Siminoles, form the most striking picture of happiness in this life; joy, contentment, love, and friendship, without guile or affectation, seem inherent in them, or predominant in their vital principle, for it leaves them but with the last breath of life. It even feems imposing a constraint upon their ancient chiefs and fenators, to maintain a neceffary decorum and folemnity, in their public councils; not even the debility and decripitude of extreme old age, is fufficient to erafe from their vifages, this youthful, joyous fimplicity; but like the gray eve of a ferene and calm day, a gladdening, cheering blufh remains on the Weftern horizon after the fun is fet.

I doubt not but fome of my countrymen who may read these accounts of the Indians, which I have endeavoured to relate according to truth, at least as they appeared to me, will charge me with partiality or prejudice in their favour.

I will, however, now endeavour to exhibit their vices, immoralities, and imperfections, from my own obfervations and knowledge, as well as accounts from the white traders, who refide amongst them.

210

The Indians make war against, kill, and destroy their own fpecies, and their motives fpring from the fame erroneous fource as they do in all other nations of mankind; that is, the ambition of exhibiting to their fellows a fuperior character of perfonal and national valour, and thereby immortalizing themfelves, by transmitting their names with honour and lustre to posterity; or revenge of their enemy, for public or personal infults; or, lastly, to extend the borders and boundaries of their, territories. But I cannot find, upon the ftricteft inquiry, that their bloody contents at this day are marked with deeper ftains of inhumanity or favage cruelty, than what may be observed amongst the most civilized nations: they do indeed fcalp their flain enemy, but they do not kill the females or children of either fex : the most ancient traders, both in the Lower and Upper Creeks, affured me they never faw an inftance of either burning or tormenting their male captives; though it is faid they used to do it formerly. I faw in every town in the Nation and Siminoles that I vifited, more or lefs male captives, fome extremely aged, who were free and in as good circumstances as their masters; and all flaves have their freedom when they marry, which is permitted and encouraged, when they and their offspring are every way upon an equality with their conquer-They are given to adultery and fornication, ors. but, I fuppofe, in no greater excels than other nations of men. They punish the delinquents, male and female equally alike, by taking off their ears. This is the punifhment for adultery. Infamy and dilgrace is supposed to be a sufficient punishment for fornication, in either fex.

They

They are fond of games and gambling, and amule themfelves like children, in relating extravagant ftories, to caufe furprife and mirth.

They wage eternal war against deer and bear, to procure food and clothing, and other neceffaries and conveniencies; which is indeed carried to an unreafonable and perhaps criminal excess, fince the white people have dazzled their fenses with foreign superfluities.

212

CHAP.

#### NORTH AMERICA.

# CHAP. VII.

ON my return to the trading houfe, from my journey to the great favanna, I found the trading company for little St. Juan's preparing for that poft.

My mind yet elate with the various fcenes of rural nature, which as a lively animated picture had been prefented to my view; the deeply engraven imprefion, a pleafing flattering contemplation, gave ftrength and agility to my fteps, anxioufly to prefs forward to the delightful fields and groves of Apalatche.

The trading company for Talahafochte being now in readiness to proceed for that quarter, under the direction of our chief trader, in the cool of the morning we fat off, each of us having a good horfe to ride, befides having in our caravan feveral pack horfes laden with provisions, camp equipage, and other neceffaries. A young man from St. Auguftine, in the fervice of the governor of East Florida, accompanied us, commissioned to purchase of the Indians and traders, fome Siminole horfes. They are the most beautiful and sprightly species of that noble creature, perhaps any where to be feen; but are of a fmall breed, and as delicately formed as the American roe buck. A horfe in the creek or Mufcogulge tongue is echoclucco, that is the great deer (echo is a deer, and clucco is big.) The Siminole horfes are faid to defcend originally from the Andalufian

Andalufian breed, brought here by the Spaniards when they first established the colony of East Florida. From the forehead to their nofe is a little arched or aquiline, and fo are the fine Chactaw horfes among the Upper Creeks, which are faid to have been brought thither from New-Mexico acrofs Miffifippi, by those nations of Indians who emigrated from the Weft, beyond the river. These horfes are every way like the Siminole breed, only larger, and perhaps not fo lively and capricious. It is a matter of conjecture and inquiry, whether or not the different foil and fituation of the country may have contributed in fome meafure, in forming and eftablishing the difference in fize and other qualities betwixt them. I have observed the horses and other animals in the high hilly country of Carolina, Georgia, Virginia, and all along our fhores, are of a much larger and ftronger make, than those which are bred in the flat country next the fea coaft. A buck-fkin of the Upper Creeks and Cherokees will weigh twice as heavy as those of the Siminoles or Lower Creeks, and those bred in the low flat country of Carolina.

Our first day's journey was along the Alachua roads, twenty-five miles to the Half-way Pond, where we encamped: the musquitoes were excelfively troublefome the whole night.

Decamped early next morning, ftill purfuing the road to Alachua, until within a few miles of Cufcowilla; when the road dividing, one for the town, and the other for the great favanna, here our company feparated. One party chofe to pafs through the town, having fome concerns there. I kept with the party that went through the favanna, it being the beft best road, leading over a part of the favanna; when entering the groves on its border, we travelled feveral miles over thefe fertile eminences, and delightful shady fragrant forests; then again entered upon the favanne, and croffed a charming extenfive green cove or bay of it, covered with a vivid green graffy turf, when we again afcended the woodland hills, through fruitful orange groves, and under shadowy palms and magnolias. Now the pine forests opened to view. We left the magnificent favanna and its delightful groves, paffing through a level, open, airy pine foreft, the stately trees fcatteringly planted by nature, arifing ftraight and erect from the green carpet, embellished with various graffes and flowering plants; then gradually afcending the fand hills, we foon came into the trading path to Talahafochte; which is general, excepting a few deviations, the old Spanish highway to St. Mark's. At about five miles distance beyond the great favanna, we came to camp late in the evening, under a little grove of live oaks, just by a group of shelly rocks, on the banks of a beautiful little lake, partly environed by meadows. The rocks, as ufual in these regions, partly encircle a spacious fink or grotto, which communicates with the waters of the lake: the waters of the grotto are perfectly transparent, cool, and pleafant, and well replenished with fifh, Soon after our arrival here, our companions who paffed through Cufcowilla joined us. A brifk cool wind during the night kept the perfecuting musquitoes at a distance.

The morning pleafant, we decamped early: proceeding on, rifing gently for feveral miles, over fandy, gravelly ridges, we found ourfelves in an elevated,

vated, high, open, airy region, fomewhat rocky, on the backs of the ridges, which prefented to view, on every fide, the most dreary, folitary, defert waste I had ever beheld; groups of bare rocks emerging out of the naked gravel and drifts of white fand; the grafs thinly fcattered and but few trees; the pines, oaks, olives, and fideroxylons, poor, mishapen, and tattered; fcarce an animal to be feen, or noife heard, fave the fymphony of the Weftern breeze, through the briftly pine leaves, or folitary fand-cricket's fcreech, or at best the more focial converse of the frogs, in solemn chorus with the fwift breezes, brought from diftant fens and forefts. Next we joyfully entered the borders of the level pine foreft and favannas, which continued for many miles, never out of fight of little lakes or ponds, environed with illumined meadows, the clear waters fparkling through the tall pines.

Having a good fpirited horfe under me, I generally kept a-head of my companions, which I often chofe to do, as circumftances offered or invited, for the fake of retirement and obfervation.

The high road being here open and fpacious, at a good diftance before me, I obferved a large hawk on the ground in the middle of the road : he feemed to be in diftrefs, endeavouring to rife; when, coming up near him, I found him clofely bound up by a very long coach-whip fnake, that had wreathed himfelf feveral times round the hawk's body, who had but one of his wings at liberty : beholding their ftruggles a while, I alighted off my horfe with an intention of parting them ; when, on coming up, they mutually agreed to feparate themfelves, each one feeking his own fafety, probably confidering confidering me as their common enemy. The bird rofe aloft and fled away as foon as he recovered his liberty, and the fnake as eagerly made off. I foon overtook him, but could not perceive that he was wounded.

I fuppofe the hawk had been the aggreffor, and fell upon the fnake with an intention of making a prey of him; and that the fnake dexteroully and luckily threw himfelf in coils round his body, and girded him fo clofe as to fave himfelf from deftruction.

The coach-whip fnake is a beautiful creature. When full grown it is fix and feven feet in length, and the largest part of its body not fo thick as a cane or common walking flick; its head not larger than the end of a man's finger; its neck is very flender, and from the abdomen tapers away in the manner of a fmall fwitch or coach-whip; the top of the head and neck, for three or four inches, is as black and fhining as a raven; the throat and belly as white as fnow; and the upper fide of the body of a chocolate colour, excepting the tail part, almost from the abdomen to the extremity, which is black. It may be proper to observe; however, that it varies in respect to the colour of the body; fome I have feen almost white or cream colour, others of a pale chocolate or clay colour, but in all, the head and neck is black, and the tail dark brown or black. It is extremely fwift, feeming almost to fly over the furface of the ground; and that which is very fingular, it can run fwiftly on its tail part only, carrying the head and body upright. One very fine one accompanied me along the road fide, at a little diftance, raifing himfelf erect, now and then looking me

me in the face, although I proceeded on a good round trot on purpofe to obferve how faft they could proceed in that polition. His object feemed mere curiofity or obfervation; with refpect to venom it is as innocent as a worm, and feems to be familiar with man. It appears to be a particular inhabitant of Eaft Florida, though I have feen fome in the maritime parts of Carolina and Georgia, but in thefe regions it is neither fo large nor beautiful.

We afcended again, paffing over fand ridges of gentle elevation, favannas and open Pine forefts. Maffes or groups of rocks prefented to view on every fide, as before mentioned; and with difficulty we efcaped the circular infundibuliform cavities or finks in the furface of the earth. Generally a group of rocks, fhaded by Palms, Live Oaks, and Magnolias, is fituated on their limb: fome are partly filled up with earth, whilit others, and the greater number of them, are partly filled with transparent cool water, which difcovers the well or perforation through the rocks in the centre. This day being remarkably fultry, we came to camp early, having chofen our fituation under fome ftately Pines, near the verge of a fpacious fayanna.

After fome refreshment, our hunters went out into the forest, and returned towards evening. Amongst other game, they brought with them a favanna crane \* which they shot in the adjoining meadows. This stately bird is about fix feet in length from the toes to the extremity of the beak when extended, and the wings expanded eight or nine feet; it is above five feet high when standing erect; the tail is remarkably short, but the stag or pendant

\* Grus. p.

feathers

feathers which fall down off the rump on each fide, are very long and sharp-pointed, of a delicate texture, and filky foftnefs; the beak is very long, ftraight and fharp pointed; the crown of the head bare of feathers, of a reddifh role colour, thinly barbed with fhort, ftiff, black hair; the legs and thighs are very long, and bare of feathers a great fpace above the knees: the plumage of this bird is generally of a pale ash colour, with shades or clouds of pale brown and fky blue, the brown prevails on the thoulders and back; the barrels of the prime quillfeathers are long and of a large diameter, leaving a large cavity when extracted from the wing : all the bones of this bird have a thin shell, and confequently a large cavity or medullary receptacle. When thefe birds move their wings in flight, their ftrokes are flow, moderate, and regular; and even, when at a confiderable diftance or high above us, we plainly hear the quill-feathers, their fhafts and webs upon one another creak as the joints or working of a veffel in a tempeftuous fea.

We had this fowl dreffed for fupper, and it made excellent foup; neverthelefs, as long as I-can get any other neceffary food, I fhall prefer their feraphic mufic in the ethereal fkies, and my eyes and underftanding gratified in obferving their economy and focial communities, in the expansive green favannas of Florida.

Next morning we arofe early, and proceeding, gradually defcended again, and continued many miles along a flat, level country, over delightful green favannas, decorated with hommocks or iflets of dark groves, confifting of Magnolia grandiflora, Morus tilia, Zanthoxylon, Laurus Borbonia, Sideroxylon, Quercus fempervirens, Halefia diptera, Callicarpa, Corypha palma, &c. There are always groups

of

of whitish testaceous rocks and finks where these hommocks are. We next croffed a wet favanna. which is the beginning of a region still lower than that we had traverfed; here we croffed a rapid rivulet of exceeding cool, pleafant water, where we halted to refresh ourselves. But it must be remarked here, that this rivulet, though lively and rapid at this time, is not a permanent stream, but was formed by a heavy rain that fell the day before, as was apparent from its bed; befides it is at beft but a jet or mere phantom of a brook, as the land around is rocky and hollow, abounding with wells and cavities. Soon after leaving the brook, we paffed off to the left hand, along the verge of an extensive favanna, and meadows many miles in circumference, edged on one border with detached groves and pompous Palms, and embellished with a beautiful sparkling lake; its verges decorated with tall waving grafs and floriferous plants; the pellucid waters gently rolling on to a dark fhaded grotto, just under a femicircular fwelling turfy afcent or bank, fkirted by groves of Magnolias, Oaks, Laurels, and Palms. In these expansive and delightful meadows were feeding and roving troops of the fleet Siminole horfe, We halted awhile at this grotto; and, after refreshing ourfelves, we mounted horfe and proceeded acrofs a charming lawn, part of the favanna, entering on it through a dark grove. In this extensive lawn were feveral troops of horfe, and our company had the fatisfaction of obferving feveral belonging to themfelves. One occurrence remarkable here, was a troop of horfe under the controul and care of a fingle black dog, which feemed to differ in no refpect from the wolf of Florida, except his being able to bark as the common dog. He was very careful and industrious in keeping them together :

ther; and if any one ftrolled from the reft at too great a diftance, the dog would fpring up, head the horfe, and bring him back to the company. The proprietor of thefe horfes is an Indian in Talahafochte, about ten miles diftance from this place, who, out of humour and experiment, trained his dog up from a puppy to this bufinefs: he follows his mafter's horfes only, keeping them in a feparate company where they range; and when he is hungry or wants to fee his mafter, in the evening he returns to town, but never ftays at home a night.

The region we had journeyed through, fince we decamped this morning, is of a far better foil and quality than we had yet feen fince we left Alachua; generally a dark gravish, and fometimes brown or black loam, on a foundation of whitish marl, chalk, and teftaceous limeftone rocks, and ridges of a loofe, coarfe, reddifh fand, producing flately Pines in the plains, and Live Oak, Mulberry, Magnolia, Palm, Zanthoxylon, &c. in the hommocks, and alfo in great plenty the perennial Indigo; it grows here five, fix, and feven feet high, and as thick together as if it had been planted and cultivated. The higher ridges of hills afford great quantities of a species of iron ore, of that kind found in New-Jerfey and Pennfylvania, and there called bog ore; it appears on the furface of the ground in large detached maffes and fmaller fragments; it is ponderous and feemed rich of that most useful metal; but one property remarkable in these terrigenous stones is, that they appear to be bliftered, fomewhat refembling cinders, or as if they had fuffered a violent action of fire.

Leaving the charming favanna and fields of Capola, we paffed feveral miles through delightful plains and

and meadows, little differing from the environs of Capola, diversified with rocky illets or hommocks of dark woodland.

We next entered a vaft foreft of the moft flately Pine trees that can be imagined, planted by nature at a moderate diffance, on a level, graffy plain, enamelled with a variety of flowering fhrubs, viz. Viola, Ruella, infundibuliforma, Amaryllis atamafco, Mimofa fenfitiva, Mimofa intfia and many others new to me. This fublime foreft continued five or fix miles, when we came to dark groves of Oaks, Magnolias, Red bays, Mulberries, &c. through which proceeding near a mile, we entered open fields, and arrived at the town of Talahafochte, on the banks of Little St. Juan.

The river Little St. Juan may, with fingular propriety, be termed the pellucid river. The waters are the clearest and purest of any river I ever faw, transmitting distinctly the natural form and appearance of the objects moving in the transparent floods, or reposing on the filvery bed, with the finny inhabitants sporting in its gently flowing stream.

The river at the town is about two hundred yards over, and fifteen or twenty feet in depth. The great fwamp and lake Oaquaphenogaw is faid to be its fource, which is about one hundred miles by land North of this place; which would give the river a courfe of near two hundred miles from its fource to the fea, to follow its meanders; as in general our rivers, that run any confiderable diftance through the country to the fea, by their windings and roving about to find a paffage through the ridges and heights, at leaft double their diftance.

The

The Indians and traders fay that this river has no branches or collateral brooks or rivers tributary to it, but that it is fed or augmented by great fprings which break out through the banks. From the accounts given by them, and my own observations on the country round about, it feems a probable affertion: for there was not a creek or rivulet to be feen. running on the furface of the ground, from the great Alachua Savanna to this river, a diffance of above feventy miles; yet, perhaps, no part of the earth affords a greater plenty of pure, falubrious The unparalleled transparency of these wawaters. ters furnishes an argument for fuch a conjecture, that amounts at least to a probability, were it not confirmed by ocular demonstration; for in all the flat countries of Carolina and Florida, except this isthmus, the waters of the rivers are, in fome degree, turgid, and have a dark hue, owing to the annual firing of the forests and plains; and afterwards the heavy rains washing the light furface of the burnt earth into rivulets, which rivulets running rapidly over the furface of the earth, flow into the rivers, and tinge the waters the colour of lye or beer, almost down to the tide near the fea coast .--But here behold how different the appearance, and how manifest the cause! for although the furface of the ground produces the fame vegetable fubstances, the foil the fame, and fuffers in like manner a general conflagration, and the rains, in impetuous fhowers, as liberally defcend upon the parched furface of the ground; yet the earth being fo hollow and porous, these superabundant waters cannot constitute a rivulet or brook, to continue any distance on its surface, before they are arrefted in their courfe and fwallowed up: thence defcending,

defcending, they are filtered through the fands and other strata of earth, to the horizontal beds of porous rocks, which, being composed of thin feparable laminæ, lying generally in obliquely horizontal directions over each other, admit these waters to pass on by gradual but constant percolation. Thus collecting and affociating, they augment and form little rills, brooks, and even fubterraneous rivers, which wander in darkness beneath the furface of the earth, by innumerable doublings, windings, and fecret labyrinths; no doubt in fome places forming vaft refervoirs and fubterranean lakes, inhabited by multitudes of fifh and aquatic animals : and poffibly when collected into large rapid brooks, meeting irrefiftible obstructions in their course, they fuddenly break through these perforated fluted rocks, in high perpendicular jets, nearly to their former level, flooding large districts of land. Thus by means of those fubterranean courses, the waters are purified and finally carried to the banks of great rivers, where they emerge and prefent themfelves to open day-light, with their troops of finny inhabitants, in those furprising vast fountains near the banks of this river; and likewife on and near the fhores of Great St. Juan, on the east coast of the isthmus, fome of which I have already given an account of.

On our arrival at Talahafochte, in the evening we repaized to the trading houfe formerly belonging to our chief, where were a family of Indians, who immediately and complaifantly moved out to accommodate us. The White King with most of the male inhabitants were out hunting or tending their Corn plantations.

The town is delightfully fituated on the elevated east banks of the river, the ground level to near the river, when it defcends fuddenly to the water; I fuppofe I fuppofe the perpendicular elevation of the ground may be twenty or thirty feet. There are near thirty habitations conftructed after the mode of Cufcowilla; but here is a more fpacious and neat councilhoufe.

Thefe Indians have large handfome canoes, which they form out of the trunks of Cyprefs trees (Cupreffus difficha), fome of them commodious enough to accommodate twenty or thirty warriors. In thefe large canoes they defcend the river on trading and hunting expeditions to the fea coaft, neighbouring iflands and keys, quite to the point of Florida, and fometimes acrofs the gulph, extending their navigations to the Bahama iflands and even to Cuba : a crew of thefe adventurers had juft arrived, having returned from Cuba but a few days before our arrival, with a cargo of fpirituous liquors, Coffee, Sugar, and Tobacco. One of them politely prefented me with a choice piece of Tobacco, which he told me he had received from the governor of Cuba.

They deal in the way of barter, carrying with them deer fkins, furs, dry fifh, bees-wax, honey, bear's oil, and fome other articles. They fay the Spaniards receive them very friendly, and treat them with the beft fpirituous liquors.

The Spaniards of Cuba likewife trade here or at St. Mark's, and other fea ports on the weft coaft of the ifthmus, in fmall floops; particularly at the bay of Carlos, where are excellent fifting banks and grounds; not far from which is a confiderable town of the Siminoles, where they take great quantities of fifth, which they falt and cure on flore, and barter with the Indians and traders for fkins, furs, &c. and return with their cargoes to Cuba.

Q

The trader of the town of Talahafochte informed me, that he had, when trading in that town, large fupplies of goods from these Spanish trading veffels, fuitable for that trade, and some very effential articles, on more advantageous terms than he could purchase at Indian stores either in Georgia or St. Augustine.

Towards the evening after the fultry heats were paft, a young man of our company having previoully procured the loan of a canoe from an Indian, proposed to me a fishing excursion for trout with the bob. We fet off down the river, and before we had paffed two miles, caught enough for our houshold : he was an excellent hand at this kind of. diversion : some of the fish were to large and strong in their element, as to fhake his arms floutly and drag us with the canoe over the floods before we got them in. It is in the eddy coves, under the points and turnings of the river, where the furface of the waters for fome acres is covered with the leaves of the Nympher, Piftia, and other amphibious herbs and grafs, where the haunts and retreats of this famous fish are, as well as others of various tribes.

Observing a fishing canoe of Indians turning a point below and coming towards us, who hailed us, we waited their coming up; they were cheerful merry fellows, and infifted on our accepting of part of their fish; they having a greater quantity and variety, especially of the bream, my favourite fish, we exchanged fome of our trout with them.

Our chief being engaged with the chiefs of the town in commercial concerns, and others of our company out in the forefts with the Indians, hunt-

ing

# NORTH AMERICA.

ing up horfes belonging to the trading company; the young interpreter, my companion, who was obliging to me, and whom our chief previoufly recommended to me as an affociate, propoled to me another little voyage down the river. This was agreeable to me, being defirous of increafing my obfervations during our continuance at Talahafochte: as when the White King fhould return to town (which was expected every hour (we intended after audience and treaty to leave them and encamp in the forefts, about fifteen miles diftance and nearer the range of their horfes.

Having fupplied ourfelves with ammunition and provifion, we fet off in the cool of the morning, and defcended pleafantly, riding on the cryftal flood, which flows down with an eafy, gentle, yet active current, rolling over its filvery bed. How abundantly are the waters replenifhed with inhabitants! the ftream almost as transparent as the air we breathe; there is nothing done in fecret except on its green flowery verges, where nature, at the command of the Supreme Creator, hath fpread a mantle, as a covering and retreat at fuitable and convenient times, but by no means a fecure refuge from the voracious enemy and purfuer.

Behold the watery nations, in numerous bands roving to and fro, amidft each other; here they feem all at peace; though, incredible to relate! but a few yards off, near the verge of the green mantled fhore there is eternal war, or rather flaughter. Near the banks the waters become turbid, from fubftances gradually diverging from each fide of the fwift channel, and collections of opaque particles whirled to fhore by the eddies, which afford a kind of nurfery for

Q 2

young

young fry, and its flimy bed is a prolific nidus for generating and rearing of infinite tribes and fwarms of amphibious infects, which are the food of young fifh, who in their turn become a prey to the older. Yet when those different tribes of fifh are in the transparent channel, their very nature seems absolutely changed; for here is neither defire to destroy ror perfecute, but all seems peace and frindship. Do they agree on a truce, a sufpension of hostilities? or by fome secret divine influence, is desire taken away? or they are otherwise rendered incapable of pursuing each other to destruction?

About noon we approached the admirable Manate Spring, three or four miles down the river. This charming nymphæum is the product of primitive nature, not to be imitated, much lefs equalled, by the united effort of human power and ingenuity! As we approach it by water, the mind of the inquiring traveller is previoufly entertained, and gradually led on to greater difcovery; first by a view of the fublime dark grove, lifted up on fhore, by a range or curved chain of hills, at a fmall diftance from the lively green verge of the river, on the eaft banks ; as we gently defcend floating fields of the Nymphæa nelumbo, interfected with viftas of the yellow green Pistia stratiotes, which cover a bay or cove of the river oppofite the circular woodland hills.

It is amazing and almost incredible, what troops and bands of fish and other watery inhabitants are now in fight, all peaceable; and in what variety of gay colours and forms, continually ascending and descending, roving and figuring amongst one another, yet every tribe associating separately. We now ascended the crystal stream; the current fwift;

228

wę

we entered the grand fountain, the expansive circular bafon, the fource of which arifes from under the bafes of the high woodland hills, nearly half encircling it. The ebullition is aftonishing, and continual, though its greatest force of fury intermits, regularly, for the fpace of thirty feconds of time: the waters appear of a lucid fea green colour, in fome measure owing to the reflection of the leaves above: the ebullition is perpendicular upwards, from a vaft ragged orifice through a bed of rocks, a great depth below the common furface of the bafon, throwing up fmall particles or pieces of white shells, which fubfide with the waters at the moment of intermission, gently fettling down round about the orifice, forming a vast funnel. At those moments, when the waters rufh upwards, the furface of the bason immediately over the orifice is greatly fwollen or raifed a confiderable height; and then it is impoffible to keep the boat or any other floating veffel over the fountain; but the ebullition quickly fubfides ; yet, before the furface becomes quite even, the fountain vomits up the waters again, and fo on perpetually. The bason is generally circular, about fifty yards over; and the perpetual ftream from it into the river is twelve or fifteen yards wide, and ten or twelve feet in depth; the bason and ftream continually peopled with prodigious numbers and variety of fish and other animals; as the alligator, and the manate \* or fea cow, in the winter feafon. Part of a skeleton of one, which the Indians had killed last winter, lay upon the banks of the spring : the grinding teeth were about an inch in diameter; the ribs eighteen inches in length, and two inches and an half in thickness, bending with a gentle curve. This bone is effeemed equal to ivery. The flefh of this

\* Trichecus manatus. Sea Cow.

creature

creature is counted wholefome and pleafant food : the Indians call them by a name which fignifies the big beaver. My companion, who was a trader in Talahafochte last winter, faw three of them at one time in this fpring: they feed chiefly on aquatic grafs and weeds. The ground round about the head of the bason is generally level, for the distance of a few yards; then gradually afcends, forming moderately high hills: the foil at top is a light, gravilh, fandy mould, which continues fome feet in depth, lying on a ftratum of yellowish clay, then clay and gravel, then fand, and fo on, ftratum upon ftratum, down to the general foundation of teltaceous rocks. In other places a deep ftratum of whitish, chalky limeftone. The vegetable productions which cover and ornament those eminences, are generally Live Oaks, Magnolia grandiflora, in the Creek tongue, Tolo-chlucco, which fignifies the Big Bay, Laurus Borbonia or Red Bay, in the Creek tongue, Etomico, that is King's tree, Olea Americana and Liquidambar, with other trees, fhrubs, and herbaceous plants common in East Florida.

The hills and groves environing this admirable fountain, affording amufing fubjects of inquiry, occafioned my flay here a great part of the day; and towards evening we returned to the town.

Next day, early in the morning, we croffed the river, landing on the other fhore oppofite the town, fwimming our horfes by the fide of the canoe, each of us holding his horfe by the bridle whillt an Indian paddled us over. After croffing, we ftruck off from the river into the forefts, fometimes falling into, and keeping for a time, the ancient Spanifh high road to Penfacola, now almost obliterated : we paffed four or five miles through old Spanish fields. There There are to be feen plain marks or veftiges of the old Spanish plantations and dwellings; as fence posts and wooden pillars of their houses, ditches, and even corn ridges and Batata hills. From the Indian accounts, the Spaniards had here a rich well cultivated and populous fettlement, and a strong fortified post, as they likewise had at the favanna and fields of Capola; but either of them far inferior to one they had some miles farther fouth-west towards the Apalachuchla River, now called the Apalachean Old Fields, where yet remain vast works and buildings, as fortifications, temples, fome brass cannon, mortars, heavy church bells, &c.

The fame groups of whitish testaceous rocks and circular finks, with natural wells, make their appearance in these groves and fields, as observed on the fide of the river opposite to Capola; and the fame trees, fhrubs, and herbage without variation. Having passed five or fix miles through these ancient fields and groves, the scene fuddenly changes, after riding through a high forest of Oak, Magnolia, Fraxinus, Liquidambar, Fagus fylvatica, &c.

Now at once opens to view, perhaps, the most extensive Cane-break \* that is to be feen on the face of the whole earth; right forward, about fouthwest, there appears no bound but the skies, the level plain, like the ocean, uniting with the firmament, and on the right and left hand, dark shaded groves, old fields, and high forests, such as we had lately passed through.

The alternate bold promontories and mifty points advancing and retiring, at length, as it were, infenfi-

bly

<sup>\*</sup> Cane meadows, fo called by the inhabitants of Carolina, &c.

bly vanishing from fight, like the two points of a crefcent, foftly touching the horizon, reprefent the most magnificent amphitheatre or circus perhaps in the whole world. The ground defcends gently from the groves to the edge of the Cane-break, forming a delightful green graffy lawn. The Canes are ten or twelve feet in height, and as thick as an ordinary walking ftaff; they grow fo clofe together, there is no penetrating them without previoufly cutting a road. We came up to this vaft plain where the ancient Spanish highway croffes it to Pensacola: there yet remain plain veftiges of the grand caufeway, which is open like a magnificent avenue, and the Indians have a bad road or pathway on it. The ground or foil of the plain is a perfectly black, rich, foapy earth, like a ftiff clay or marle, wet and boggy near the fhore, but, further in, firm and hard enough in the fummer feafon, but wet and in fome places under water during the winter.

This vaft plain, together with the forefts contiguous to it, if permitted (by the Siminoles who are fovereigns of thefe realms) to be in poffeffion and under the culture of induftrious planters and mechanics, would in a little time exhibit other fcenes than it does at prefent, delightful as it is; for by the arts of agriculture and commerce, almost every defirable thing in life might be produced and made plentiful here, and thereby establish a rich, populous, and delightful region; as this foil and climate appears to be of a nature favourable for the production of almost all the fruits of the earth, as Corn\*, Rice, Indigo, Sugar-cane, Flax, Cotton, Silk, Cochineal, and all the varieties of escuent vegetables; and I suppose no part of the earth affords such end-

\* 7.02.

232

lefş

lefs range and exuberant pafture for cattle, deer, fheep, &c.: the waters every where, even in the holes in the earth, abound with varieties of excellent fifh; and the forefts and native meadows with wild game, as bear, deer, turkeys, quail, and in the winter feafon geefe, ducks, and other fowl: and lying contiguous to one of the most beautiful, navigable rivers in the world, and not more than thirty miles from St. Mark's on the great bay of Mexico, is most conveniently fituated for the West India trade and the commerce of all the world.

After indulging my imagination in the contemplation of these grand diversified scenes, we turned to the right hand, riding over the charming green terrace dividing the forefts from the plains, and then entering the groves again, continued eight or nine miles up the river, four or five miles diftance from its banks; having continually in view, on one fide or other, expansive green fields, groves, and high forefts; the meadows glittering with diftant lakes and ponds, alive with cattle, deer, and turkeys, and frequently prefenting to view remains of ancient Spanish plantations. At length, towards evening, we turned about, and came within fight of the river, where falling on the Indian trading path, we continued along it to the landing-place opposite the town, when hallooing and difcharging our pieces, an Indian with a canoe came prefently over, and conducted us to the town before dark.

On our arrival at the trading house, our chief was visited by the head men of the town, when instantly the White King's arrival in town was announced: a messenger had before been sent in to prepare a feast, the king and his retinue having killed several bears. A fire was now kindled in the area

area of the public fquare; the royal flandard was difplayed, and the drum beat to give notice to the town of the royal feaft.

The ribs and the choice pieces of the three great fat bears already well barbecued or broiled, were brought to the banquetting house in the square, with hot bread; and honeyed water for drink.

When the feaft was over in the fquare (where only the chiefs and warriors were admitted, with the white people, the chief priest, attended by flaves, came with bafkets and carried off the remainder of the victuals, &c. which was distributed amongft the families of the town. The king then withdrew, repairing to the council-house in the fquare, whither the chiefs and warriors, old and young, and fuch of the whites as chofe, repaired alfo; the king, war chief, and feveral ancient chiefs and warriors were feated on the royal cabins; the reft of the head men and warriors, old and young, fat on the cabins on the right hand of the king's: the cabins or feats on the left, and on the fame elevation, are always affigned for the white people, Indians of other towns, and fuch of their own people as choofe.

Our chief, with the reft of the white people in town, took their feats according to order : tobacco and pipes were brought; the calumet was lighted and fmoaked, circulating according to the ufual forms and ceremony; and afterwards black drink conclude the feaft. The king converfed, drank caftine, and affociated familiarly with his people and with us.

After the public entertainment was over, the young people began their mufic and dancing in the fquare, fquare, whither the young of both fexes repaired, as well as the old and middle aged : this frolick continued all night.

The White King of Talahafochte is a middle aged man, of moderate ftature; and though of a lofty and majeftic countenance and deportment, yet I am convinced this dignity, which really feems graceful, is not the effect of vain fupercilious pride, for his fmiling countenance and his cheerful familiarity befpeak magnanimity and benignity.

Next a council and treaty was held. They requefted to have a trading houfe again eftablished in the town, affuring us that every possible means should constantly be purfued to prevent any diffurbance in future on their part; they informed us that the murderers of M'Gee \* and his affociates were to be put to death, that two of them were already shot, and they were in purfuit of the other.

Our chief trader in anfwer informed them, that the re-eftablifhment of friendfhip and trade was the chief object of his vifit, and that he was happy to find his old friends of Talahafochte in the fame good difpofition, as they ever were towards him and the white people; that it was his wifh to trade with them, and that he was now come to collect his packhorfes to bring them goods. The king and the chiefs having been already acquainted with my bufinefs and purfuits amonght them, received me very kindly; the king in particular complimented me,

\* M'Gee was the leader of a family of white people from Georgia deftined acrofs the ifthmus, to the Mobile river : they travelled on horfeback as far as this town, where they procured cances of the Indians, continuing their travels, defeeding the river and coafting the main S. W.; but at night, when on fhore hunting provifions, their camp was furprifed and attacked by a predatory band of Indians, who flew M'Gee and the reft of the men, and carried off the plunder and a woman to their towns.

faying

faying that I was as one of his own children or people, and fhould be protected accordingly, while I remained with them, adding, "Our whole country is before you, where you may range about at pleafure, gather phyfic plants and flowers, and every other production:" thus the treaty terminated friendlily and peaceably.

Next day early in the morning we left the town and the river, in order to fix our encampment in the forests about twelve miles from the river; our companions with the pack-horfes went a-head to the place of rendezvous, and our chief conducted me another way to fhow me a very curious place, called the Alligator-Hole, which was lately formed by an extraordinary eruption or jet of water. It is one of those vast circular finks, which we beheld almost every where about us as we traversed these forests, after we left the Alachua favanna. This remarkable one is on the verge of a fpacious meadow, the furface of the ground round about uneven by means of gentle rifing knolls: fome detached groups of rocks and large fpreading live oaks shade it on every fide: it is about fixty yards over, and the furface of the water fix or feven feet below the rim of the funnel or bason: the water is transparent. cool, and pleafant to drink, and well flored with fish; a very large alligator at prefent is lord or chief: many have been killed here, but the throne is never long vacant, the vaft neighbouring ponds fo abound with them.

The account that this gentleman, who was an eye-witnefs of the laft cruption, gave me of its firft appearance, being very wonderful, I proceed to relate what he told me whilft we were in town, which was confirmed by the Indians, and one or more of

our

our companions, who alfo faw its progrefs, as well as by my own obfervations after I came to the ground.

This trader being near the place (before it had any visible existence in its prefent appearance), about three years ago, as he was looking for fome horfes which he expected to find in thefe parts, on a fudden was aftonifhed by an inexpreffible rushing noife, like a mighty hurricane or thunder ftorm; and looking round, he faw the earth overflowed by torrents of water, which came, wave after wave, rushing down a vale or plain very near him, which it filled with water, and foon began to overwhelm the higher grounds, attended with a terrific noifé and tremor of the earth. Recovering from his first furprife, he immediately refolved to proceed for the place from whence the noile feemed to come; and foon came in fight of the incomparable fountain, and faw, with amazement, the floods rushing upwards many feet high, and the expanding waters, which prevailed every way, fpreading themfelves far and near. He at length concluded (he faid) that the fountains of the deep were again broken up, and that an univerfal deluge had commenced; and inftantly turned about and fled to alarm the town, about nine miles distance : but before he could reach it, he met feveral of the inhabitants, who already alarmed by the unufual noife, were hurrying on towards the place; upon which he returned with the Indians, taking their ftand on an eminence to watch its progrefs and the event. It continued to jet and flow in this manner for feveral days, forming a large, rapid creek or river, defcending and following the various courfes and windings of the valley, for the diffance of feven or eight miles, emptying itself into a vast favanna, where

where was a lake and fink which received and gave vent to its waters.

The fountain, however, gradually ceafed to overflow, and finally withdrew itfelf beneath the common furface of the earth, leaving this capacious bafon of waters, which, though continually near full, hath never fince overflowed. There yet remains, and will, I fuppofe, remain for ages, the dry bed of the river or canal, generally four, five, and fix feet below the natural furface of the land; the perpendicular, ragged banks of which, on each fide, flow the different ftrata of the earth; and at places, where ridges or a fwelling bank croffed and opposed its courfe and fury, are vaft heaps of fragments of rocks, white chalk, ftones, and pebbles, which were collected and thrown into the lateral vallies, until the main ftream prevailed over and forced them afide, overflowing the levels and meadows, for fome miles diftance from the principal ftream, on either fide. We continued down the great vale, along its banks, quite to the favanna and lake where it vented itfelf, while its ancient fubterranean channel was gradually opening, which, I imagine, from fome hidden event or caufe had been choaked up, and which, we may fuppofe, was the immediate caufe of the eruption.

In the evening, having gained our encampment, on a graffy knoll or eminence, under the cover of fpreading oaks, just by the grotto or fink of the lake, which lay as a fparkling gem on the flowery bofom of the ample favanna; our roving affociates foon came in from the ranging forefts. We continued our encampment at this place for feveral days, ranging around the delightful country to a great diftance, tance, every day's excursion prefenting new scenes of wonder and delight.

Early in the morning our chief invited me with him on a vifit to the town, to take a final leave of the White King. We were gracioufly received and treated with the utmost civility and hospitality: there was a noble entertainment and repair provided against our arrival, confisting of bear's ribs, venifon, varieties of fish, roasted turkies (which they call the white man's difh), hot corn cakes, and a very agreeable, cooling fort of jelly, which they call conte: this is prepared from the root of the China briar (Smilax pfeudo-China; Smilax afpera, fructu nigro, radice nodofa, magna, lævi, farinacea; Sloan, tom. 1. p. 31. t. 143. f. 1. habit. Jamaica, Virginia, Carolina, and Florida): they chop the roots in pieces, which are afterwards well pounded in a wooden mortar, then being mixed with clean water, in a tray or trough, they firain it through baskets; the fediment, which fettles to the bottom of the fecond veffel, is afterwards dried in the open air : and is then a very fine reddilh flour or meal : a fmall quantity of this mixed with warm water and fweetened with honey, when cool, becomes a beautiful, delicious jelly, very nourifhing and wholefome. They also mix it with fine corn flour, which being fried in fresh bear's oil makes very good hot cakes or fritters.

On our taking leave of the king and head men, they entreated our chief to repretent to the white people, their unfeigned defire to bury in oblivion the late breech of amity and intermission of commerce, which they trusted would never be reflected on the people of Talahasotche; and, lastly, that we would

would fpeedily return with merchandize as heretofore; all which was cheerfully confented to, affuring them their wifnes and fentiments fully coincided with ours.

The chief trader, intending to fhew me fome remarkable barren plains, on our return to our encampment, about noon we fat off: when we came within fight of them, I was ftruck with aftonifhment at their dreary appearance; the view Southerly feemed endlefs waftes, prefenting rocky, gravelly and fandy barren plains, producing fcarcely any vegetable fubstances, except a few shrubby crooked Pine trees, growing out of heaps of white rocks, which reprefented ruins of villages, planted over the plains; with clumps of mean fhrubs, which ferved only to perpetuate the perfecuting power and rage of fire, and to teltify the aridity of the foil. The fhrubs I obferved were chiefly the following; Myrica cerifera, two or three varieties, one of which is very dwarfish, the leaves small, yet toothed or finuated, of a yellowish green colour, owing to a farinaceous pubefcence or veficula which covers their furfaces; Prinos, varieties, Andromeda ferruginea, Andr. nitida, varieties, Rhamnus frangula, Sideroxylon fericium, Ilex aquifolium, Ilex myrtifolium, Empetrum, Kalmia ciliata, Caffine, and a great variety of fhrub Oaks, evergreen and deciduous, fome of them fingularly beautiful; Corypha repens; with a great variety of herbage, particularly Cacalia, Prenanthus, Chryfocoma, Helianthus, Silphium, Lobelia, Globularia, Helenium, Polygala, varietics, Clinopodium, Cactus, various fpecies, Euphorbia, various species, Afclepias carnofa, very beautiful and fingular, Sophora, Dianthus, Ciftus, Sifymbrium, Pedicularis, Gerardia, Lechea.

240

Lechea, Gnaphalium, Smilax farfaparilla, Smilax pumila, Solidago, After, Lupinus filifolius, Galega, Hedyfarum, &c. with various species of graffes. But there appeared vaft fpecies of gravel and plains of flat rocks, just even with the furface of the earth, which feemed entirely defittute of any vegetation, unlefs we may except fome different kinds of moffes of the crustaceous forts, as lichen, alga, &c. and coralloides. After paffing feveral miles on the borders of thefe deferts, frequently alighting on them for obfervation and making collections, they at length gradually united or joined with infinite favannas and ponds, ftretching beyond the fight foutherly, parallel with the rocky barrens; being feparated only by a narrow, low, rocky ridge of open groves, confifting of low, fpreading Live Oaks, Zanthoxylon, Ilex, Sideroxylon, &c.; and here and there, standing either in groups or alone, the pompous Palm tree, glorioufly erect or gracefully bowing towards the earth; exhibiting a most pleafing contrast and wild Indian scene of primitive unmodified nature, ample and magnificent. We at length came abreaft of the expansive, glittering lake, which divided the ample meadows, one end of which stretching towards a verdant eminence, formed a little bay, which was partly encircled by groups of white chalky rocks, fhaded with Live Oaks, Bays, Zanthoxylon and Palm trees. We turned our horfes to graze in the green lawns, whilft we traverfed the groves and meadows. Here the palmated Convolvulus trailed over the rocks, with the Hedera carnofa (fol. quinatis incifo-ferratis, perennentibus), and the fantastic Clitoria, decorating the shrubs with garlands (Clit. caule volubili fol. ternatis pennatifque, flor. majore cæruleo, vexillo rotundiore, filiquis longiffimis compressis).

R

Soon

242

8... m

Soon after entering the forefts, we were met in the path by a fmall company of Indians, fmiling and beckoning to us long before we joined them. This was a family of Talahafochte who had been out on a hunt, and were returning home loaded with barbecued meat, hides and honey. Their company confifted of the man, his wife and children, well mounted on fine horfes, with a number of pack-horfes. The man prefently offered us a fawnfkin of honey, which we gladly accepted, and at parting I prefented him with fome fifh hooks, fewing needles, &c.; for in my travels amongst the Indians, I always furnished myfelf with fuch uleful and acceptable little articles of light carriage, for prefents. We parted, and before night rejoined our companion at the Long Pond.

On our return to camp in the evening, we were faluted by a party of young Indian warriors, who had pitched their camp on a green eminence near the lake, and at a fmall distance from our camp, under a little grove of Oaks and Palms. This company confifted of feven young Siminoles, under the conduct of a young prince or chief of Talahafochte, a town fouthward in the ifthmus. They were all dreffed and painted with fingular elegance, and richly ornamented with filver plates, chains, &c. after the Siminole mode, with waving plumes of féathers on their crefts. On our coming up to them, they arole and shook hands; we alighted and fat a while with them by their cheerful fire.

The young prince informed our chief that he was in purfuit of a young fellow, who had fled from the town, carrying off with him one of his favourite young wives or concubines. He faid merrily he would have the ears of both of them before

he

he returned. He was rather above the middle ftature, and the most perfect human figure I ever faw; of an amiable engaging countenance, air and deportment; free and familiar in conversation, yet retaining a becoming gracefulness and dignity. We arose, took leave of them and crossed a little vale covered with a charming green turf, already illuminated by the fost light of the full moon.

Soon after joining our companions at camp, our neighbours, the prince and his affociates, paid us a vifit. We treated them with the beft fare we had, having till this time preferved fome of our fpirituous liquors. They left us with perfect cordiality and cheerfulnefs, wifhing us a good repofe, and retired to their own camp. Having a band of mufic with them, confifting of a drum, flutes, and a rattle gourd, they entertained us during the night with their mufic, vocal and inftrumental.

There is a languifhing foftnefs and melancholy air in the Indian convivial fongs, efpecially of the amorous clafs, irrefiftibly moving, attractive, and exquifitely pleafing, efpecially in these folitary receffes, when all nature is filent.

Behold how gracious and beneficent fhines the rofeate morn! Now the fun arifes and fills the plains with light; his glories appear on the forefts, encompaffing the meadows, and gild the top of the terebinthine Pine and exalted Palms, now gently ruftling by the preffure of the waking breezes: the mufic of the feraphic cranes refounds in the fkies; in feparate fquadrons they fail, encircling their precincts, flowly defcend beating the denfe air, and alight on the green dewy verge of the expansive lake; its furface yet fmoking with the gray af-R 2 cending

cending mifts, which, condenfed aloft in clouds of vapour, are borne away by the morning breezes, and at last gradually vanish on the distant horizon. All nature awakes to life and activity.

The ground, during our progrefs this morning, every where about us prefented to view those funnels, finks and wells in groups of rocks, amidst the groves, as already recited.

Near our next encampment, one more confpicuous than I had elfewhere obferved prefenting itfelf, I took occasion from this favourable circumstance of obferving them in all their variety of appearances. Its outer superficial margin was fifty or fixty yards over, which equally and uniformly on every fide floped downwards towards the centre: on one fide of it was a confiderable path-way or road leading down to the water, worn by the frequent refort of wild creatures for drink, when the waters were rifen even or above the rocky bed, but at this time they were funk many yards below the furface of the We descended first to the bed of rocks, earth. which was perforated with perpendicular tubes, exactly like a walled well, four, five, or fix feet in diameter, and may be compared to cells in an honeycomb, through which appeared the water at bottom : many of these were broken or worn one into another, forming one vaft well with uneven walls, confifting of projecting jams, pilastres, or buttreffes, and excavated semicircular niches, as if a piece were taken out of a honey-comb: the bed of rocks is from fifteen to twenty feet deep or in thicknefs, though not of one folid mafs, but of many, generally horizontal, laminæ, or strata, of various thicknefs, from eighteen inches to two or three feet; which admit water to-weep through, trickling down, drop

244 .

drop after drop, or chafing each other in winding little rills down to the bottom. One fide of the vaft cool grotto was fo fhattered and broken in, I thought it poffible to defcend down to the water at bottom; and my companion affuring me that the Indians and traders frequently go down for drink, encouraged me to make the attempt, as he agreed to accompany me.

Having provided ourfelves with a long fnagged fapling, called an Indian ladder, and each of us a pole, by the affiftance of these we both descended fafely to the bottom, which we found nearly level and not quite covered over with water; on one fide was a bed of gravel and fragments of rocks or stores, and on the other a pool of water near two feet deep, which moved with a flow current under the walls on a bed of clay and gravel.

After our return to the furface of the earth, I again ranged about the groves and grottos, examining a multitude of them. Being on the margin of one in the open foreft, and observing fome curious vegetable productions growing on the fide of the floping funnel towards its centre, the furface of the ground covered with grafs and herbage; unapprehenfive of danger, I descended precipitately towards the group of fhrubs; when I was furprifed and providentially flopped in my career, at the ground founding hollow under my feet; and obferving chafms through the ground, I quickly drew back, and returning again with a pole with which I beat in the earth, to my aftonishment and dread appeared the mouth of a well through the rocks, and I observed the water glimmering at the bottom. Being wearied with excursions, we returned to our pleafant fituation on the verge of the lawn.

Next

Next day we fet off on our return to the lower trading-houfe, proposing to encamp at a favanna, about twelve miles diftance from this, where we were to halt again and ftay a day or two, in order to collect together another party of horfes, which had been flationed about that range. The young wild horfes often breaking from the company, rendered our progress flow and troublefome; we however arrived at the appointed place long before night.

I had an opportunity this day of collecting a variety of fpecimens and feeds of vegetables, fome of which appeared new to me, particularly Sophora, Ciftus, Tradefcantia, Hypoxis, Iatropa, Gerardai, Pedicularis, Mimofa fenfitiva, Helonias, Melanthium, Lilium, Aletris, Agave, Cactus, Zamia, Empetrum, Erythryna, Echium, &c.

Next day, the people being again engaged in their bufinefs of ranging the forefts and plains, in fearch of their horfes, I accompanied them, and in our rambles we again vifited the great favanna and lake, called the Long Pond : the lake is nearly in the middle of the fpacious lawn, of an oblong form ; above two miles wide and feven in length ; one end approaching the high green banks adjoining the forefts, where there is an enchanting grove and grotto of pellucid waters, inhabited with multitudes of fifh, continually afcending and defcending through the clean, white rocks, floping from the green verged fhore, by gradual fteps, from fmooth, flat pavements wafhed by the fwelling undulations of the waters.

Arrived in the evening at camp, where we found the reft of our companions bufily employed in fecuring

curing the young freakish horses. The next day, was employed in like manner, breaking and tutoring the young fleeds to their duty. The day following we took a final leave of this land of meadows, lakes, groves and grottos, directing our courfe for the trading path. Having traverfed a country, in appearance, little differing from the region lying upon Little St. Juan, we gained about twelve miles on our way; and in the evening encamped on a narrow ridge, dividing two favannas from each other, near the edge of a deep pond; here our people made a large pen or pound to fecure their wild horfes during the night. There was a little hommock or islet containing a few acres of high ground, at fome distance from the shore, in the drowned favanna, almost every tree of which was loaded with nefts of various tribes of water fowl, as ardea alba; ar. violacea, ar. cerulea, ar. stellaris cristata, ar. stellaris maxima, ar. virescens, colymbus, tantalus, mergus and others; thefe nefts were all alive with young, generally almost full grown, not yet fledged, but covered with whitiff or cream coloured foft down. We vifited this bird ille, and some of our people taking flicks or poles with them, foon beat down, and loaded themfelves with these fquabs, and returned to camp; they were almost a lump of fat, and made us a rich fupper; fome we roafted, and made others into a pilloe with rice: most of them, except the bitterns and tantali, were fo exceffively fifty in tafte and fmell, I could not relifh It is incredible what prodigious numbers them. there were, old and young, on this little iflet, and the confufed noife which they kept up continually, the young crying for food inceffantly, even whilft in their throats, and the old alarmed and difpleafed at our near refidence, and the depredations we had made

made upon them; their various languages, cries, and fluttering caufed an inexpreffible uproar, like a public fair or market in a populous trading city, when fuddenly furprifed by fome unexpected calamitous event.

About midnight, having fallen afleep, I was awakened and greatly furprifed at finding most of my companions up in arms, and furioufly engaged with a large alligator but a few yards from me. One of our company, it feems, awoke in the night, and perceived the monfter within a few paces of the camp, when giving the alarm to the reft, they readily came to his affiftance, for it was a rare piece of fport. Some took fire-brands and caft them at his head, whilft others formed javelins of faplins, pointed and hardened with fire; thefe they thrust down his throat into his bowels, which caufed the monfter to roar and bellow hideoufly; but his ftrength and fury were fo great, that he eafily wrenched or twifted them out of their hands, and wielding and brandifhing them about, kept his enemies at a diffance for a time. Some were for putting an end to his life and fufferings with a rifle ball, but the majority thought this would too foon deprive them of the diversion and pleasure of exercifing their various inventions of torture: they at length however grew tired, and agreed in one opinion, that he had fuffered fufficiently; and put an end to his existence. This crocodile was about twelve feet in length: we fuppofed that he had been allured by the fifty fcent of our birds, and encouraged to undertake and purfue this hazardous adventure which cost him his life. This, with other inftances already recited, may be fufficient to prove the intrepidity and fubtility of those voracious, formidable animals.

We

We fat off early next morning, and foon after falling into the trading path, accomplished about twenty miles of our journey; and in the evening encamped as ufual, near the banks of favannas and ponds, for the benefit of water and accommodations of pasture for our creatures. Next day we passed over part of the great and beautiful Alachua Savanna, whofe exuberant green meadows, with the fertile hills which immediately encircle it, would, if peopled and cultivated after the manner of the civilized countries of Europe, without crowding or incommoding families, at a moderate estimation, accommodate in the happiest manner above one hundred thousand human inhabitants, befides millions of domestic animals; and I make no doubt this place will at fome future day be one of the most populous and delightful feats on earth.

We came to camp in the evening, on the banks of a creek but a few miles diftance from Cufcowilla; and two days more moderate travelling brought us fafe back again to the lower trading-houfe, on St. Juan, having been bleffed with health and a profperous journey.

On my arrival at the flores, I was happy to find all well as we had left them; and our bringing with us friendly talks from the Siminole towns, and the Nation likewife, completed the hopes and wifnes of the trading company, with refpect to their commercial concerns with the Indians, which, as the cheering light of the fun-beams after a dark tempeftuous night, diffufed joy and conviviality throughout the little community, where were a number of men with their families, who had been put out of employment and fubfiftence, anxioufly waiting the happy event.

# CHAP. VIII.

As a loading could not be procured until late in the autumn, for the fchooner that was to return to Georgia, this circumftance allowed me time and opportunity to continue my excursions in this land of flowers, as well as at the fame time to augment my collections of feeds, growing roots, &c.

I refolved upon another' little voyage up the river; and after refting a few days and refitting my bark, I got on board the neceffary ftores, and furnishing myself with boxes to plant roots in, with my fuzee, ammunition and fifting tackle, I fet fail, and in the evening arrived at Mount Royal. Next morning, being moderately calm and ferene, I fet fail with a gentle leading breeze, which delightfully wafted me across the lake to the west coast. landing on an airy, fandy beach, a pleafant, cool fituation, where I paffed the night, but not without frequent attacks from the mulquitoes; and next day, vifited the Great Springs, where I remained until the fucceeding day, increasing my collections of fpecimens, feeds and roots; and then recroffed the lake. to the eaftern fhore. This fhore is generally bolder and more rocky than the western, it being exposed to the lash of the furf, occasioned by the W. and N. W. winds, which are brifk and conftant from nine or ten o'clock in the morning till towards midnight, almost the year round; though the S. winds are confiderable in the fpring, and by fhort intervals during the fummer and winter; and the N. E. though fometimes very violent in the fpring and autumn,

#### NORTH AMERICA.

autumn, does not continue long. The day was employed in coafting flowly, and making collections. In the evening I made a harbour under cover of a long point of flat rocks, which defended the mole from the furf. Having fafely moored my bark, and chofen my camping ground just by, during the fine evening I reconnoitred the adjacent groves and lawns. Here is a deferted plantation, the property of Dr. Stork, where he once refided. I observed many lovely shrubs and plants in the old fields and Orange groves, particularly feveral fpecies of Convolvulus and Ipomea, the former having very large, white, fweet fcented flowers: they are great ramblers, climbing and ftrolling on the fhrubs and hedges. Next morning I re-embarked, and continued traverfing the bold coaft north-eaftward, and fearching the fhores at all convenient landings. where I was amply rewarded for my affiduity in the fociety of beauties in the blooming realms of Florida. Came to again, at an old deferted plantation, the property of a British gentleman, but fome years fince vacated. A very spacious frame building was fettling to the ground and mouldering to earth. Here are very extensive old fields, where . were growing the Weft-Indian or perennial Cotton and Indigo, which had been cultivated here, and fome fcattered remains of the ancient orange groves, which had been left ftanding at the clearing of the plantation.

I have often been affected with extreme regret, at beholding the deftruction and devastation which has been committed or indifcreetly exercifed on those extensive fruitful Orange groves, on the banks of St. Juan, by the new planters under the British government, some hundred acres of which, at a fingle

fingle plantation, have been entirely destroyed, to make room for the indigo, Cotton, Corn, Batatas, &c. or, as they fay, to extirpate the mulquitoes, alledging that groves near the dwellings are haunts and fhelters for those perfecuting infects. Some plantations have not a fingle tree standing; and where any have been left, it is only a fmall coppice or clump, nakedly exposed and deftitute; perhaps fifty or an hundred trees flanding near the dwelling-houfe, having no lofty cool grove of expansive Live Oaks, Laurel Magnolias, and Palms, to fhade and protect them, exhibiting a mournful, fallow countenance; their native perfectly formed and gloffy green foliage as if violated, defaced and torn to pieces by the bleak winds, fcorched by the burning fun-beams in fummer, and chilled by the winter frofts.

In the evening I took up my quarters in the beautiful ifle in fight of Mount Royal. Next day, after collecting what was new and worthy of particular notice, I fet fail again, and called by the way at Mount Royal. In the evening arrived fafe at the flores, bringing along with me valuable collections.

## NORTH AMERICA.

# CHAP. IX.

At the trading-house I found a very large party of the Lower Creeks encamped in a grove, just without the pallifadoes. This was a predatory band of the Siminoles, confisting of about forty warriors defined against the Chactaws of West Florida. They had just arrived here from St. Augustine, where they had been with a large troop of horses for fale, and furnished themselves with a very liberal supply of spirituous liquors, about twenty kegs, each containing five gallons.

These fons of Mars had the continence and fortitude to withstand the temptation of even tasting a drop of it until their arrival here, where they purposed to supply themselves with necessary arricles to equip them for the expedition, and proceed on directly; but here meeting with our young traders and pack-horse men, they were son prevailed on to broach their beloved nectar; which in the end caused fome disturbance, and the confumption of most of their liquor; for after they had once got a smack of it, they never were solver for ten days, and by that time there was but little left.

In a few days this feftival exhibited one of the most ludicrous bacchanalian fcenes that is possible to be conceived. White and red men and women without distinction, passed the day merrily with these jovial, amorous topers, and the nights in convivial fongs, dances, and facrifices to Venus, as long as they could stand or move; for in these frolicks both fexes take fuch liberties with each other, and

act.

act, without constraint or shame, fuch scenes as they would abhor when fober or in their fenfes; and would endanger their ears and even their lives : but at last their liquor running low, and being most of them fick through intoxication, they became more fober; and now the dejected lifelefs fots would pawn every thing they were in poffeffion of, for a mouthful of fpirits to fettle their ftomachs, as they termed it. This was the time for the wenches to make their market, as they had the fortitude and fubtilty by diffimulation and artifice to fave their fhare of the liquor during the frolick, and that by a very fingular ftratagem; for, at thefe riots, every fellow who joins in the club, has his own quart bottle of rum in his hand, holding it by the neck fo fure, that he never loofes hold of it day or night, drunk or fober, as long as the frolick continues; and with this, his beloved friend, he roves about continually, finging, roaring, and reeling to and fro, either alone, or arm in arm with a brother toper, prefenting his bottle to every one. offering a drink; and is fure to meet his beloved female if he can, whom he complaifantly begs to drink with him. But the modest fair, veiling her face in a mantle, refuses, at the beginning of the frolick; but he preffes and at laft infifts. She being furnished with an empty bottle, concealed in her mantle, at last confents, and taking a good long draught, blushes, drops her pretty face on her bofom, and artfully difcharges the rum into her bottle, and by repeating this artifice foon fills it: this fhe privately conveys to her fecret ftore, and then returns to the jovial game, and fo on during the feftival; and when the comic farce is over, the wench retails this precious cordial to them at her own price.

254

There

There were a few of the chiefs, particularly the Long Warrior their leader, who had the prudence and fortitude to refift the alluring temptation during the whole farce; but though he was a powerful chief, a king, and a very cunning man, he was not able to controul thefe madmen, although he was acknowledged by the Indians to have communion with powerful invifible beings or fpirits, and on that account efteemed worthy of homage and great refpect.

After the Indians became fober, they began to prepare for their departure. In the morning early the Long Warrior and chiefs fent a meffenger to Mr. M'Latche, defiring to have a talk with him upon matters of moment: accordingly, about noon they arrived. The conference was held in the piazza of the council houfe: the Long Warrior and chiefs who attended him, took their feats upon a long bench adjoining the fide or front of the houfe, reaching the whole length of it, on one hand; and the principal white traders on the other, all on the fame feat. I was admitted at this conference; Mr. M'Latche and the Long Warrior fat next to each other; my late companion, the old trader, and myfelf fat next to him.

The Long Warrior fpake, faying, that he and his companions were going to fight their enemies the Chactaws; and that fome of his affociates being in want of blankets, fhirts, and fome other articles, they declined fupplying themfelves with them at St. Augustine, because they had rather flick close to their old friend Mr. Spalding, and bring their buckskins, furs, and other produce of their country (which they knew were acceptable) to his

256

his trading houfe, to purchase what they wanted. But not having the skins, &c. with them to pay for fuch things as they had occasion for, they doubted not, but that on their return, they flould bring with them fufficient not only to pay their debts, about to be contracted, but be able to make other confiderable purchafes, as the principal object of this expedition was hunting on the plentiful borders Mr. M'Latche hefitating, and of the Chactaws. expressing some diffatisfaction at his request; particularly at the length of time and great uncertainty of obtaining pay for the goods; and moreover his being only an agent for Meffrs. Spalding and Co. and the magnitude and unprecedented terms of the Long Warrior's demands; required the company's affent and directions before he could comply with their request.

This answer displeased the Indian chief, and I observed great agitation and tumult in his passions, from his actions, hurry and rapidity of fpeech and expression. The old interpreter who fat by asked me if I fully underftood the debate; I answered that I apprehended the Long Warrior was difpleafed; he told me he was fo, and then recapitulated what had been faid respecting his questions and Mr. M'Latche's anfwer; adding, that upon his hefitation he immediately replied, in feeming difgust and great expressions of anger, " Do you presume to refuse me credit; certainly you know who I am and what power I have : but perhaps you do not know, that if the matter required it, and I pleafed, I could command and caufe the terrible thunder \* now rolling in the fkies above, to defcend

\* It thundered, lightened, and rained in a violent manner during thefedebates. upon your head, in rapid fiery fhafts, and lay you proftrate at my feet, and confume your ftores, turning them inftantly into dust and ashes." Mr. M'Latche calmly replied, that he was fully fenfible that the Long Warrior was a great man, a powerful chief of the bands of the respectable Siminoles, that his name was terrible to his enemies, but still he doubted if any man upon earth had fuch power, but rather believed that thunder and lightning was under the direction of the Great Spirit; but however, fince we are not difposed to deny your power, fupernatural influence and intercourfe with the elements and fpiritual agents, or withhold the respect and homage due to fo great a prince of the Siminoles, friends and allies to the white people; if you think fit now in the prefence of us all here, command and caufe yon terrible thunder with its rapid fiery fhafts, to defcend upon the top of that Live Oak\* in front of us, rend it in pieces, fcatter his brawny limbs on the earth and confume them to afhes before our eves, we will then own your fupernatural power and dread your difpleafure.

After fome filence the prince became more calm and eafy, and returned for anfwer, that recollecting the former friendfhip and good understanding, which had ever fubfisted betwixt the white people and red people of the Siminole bands, and in particular, the many acts of friendfhip and kindnefs received from Mr. M'Latche, he would overlook this affront; he acknowledged his r afoning and expostulations to be just and manly, that he should supprefs his refentment, and withhold his power and vengeance at prefent. Mr. M'Latche concluded by faying, that he was not

\* A large ancient Live Oak flood in the yard about fifty yards diffance.

5

in

in the leaft intimidated by his threats of deftroying him with thunder and lightning, neither was he difpofed in any manner to difpleafe the Siminoles, and fhould certainly comply with his requifitions, as far as he could proceed without the advice and directions of the company; and finally agreed to fupply him and his followers with fuch things as they flood most in need of, fuch as shirts, blankets and fome paints, one half to be paid for directly, and the remainder to ftand on credit until their return. from the expedition. This determination entirely fatisfied the Indians. We broke up the conference in perfect amity and good humour, and they returned to their camp, and in the evening, ratified it with feafting and dancing, which continued all next day with tolerable decorum. An occurrence happened this day, by which I had an opportunity of obferving their extraordinary veneration or dread of the rattle fnake. I was in the forenoon buly in my apartment in the council-houfe, drawing fome curious flowers; when, on a fudden, my attention was taken off by a tumult without, at the Indian camp. I ftepped to the door opening to the piazza, where I met my friend the old interpreter, who informed me that there was a very large rattle fnake in the Indian camp, which had taken poffeffion of it, having driven the men, women and children out, and he heard them faying that they would fend for Puc-Puggy (for that was the name which they had given me, fignifying the Flower Hunter) to kill him or take him out of their camp. I answered, that I defired to have nothing to do with him, apprehending fome difagreeable confequences; and defired that the Indians might be acquainted that I was engaged in bufinefs that required application and quiet, and was determined to avoid it if poffible.

## NORTH AMERICA.

poffible. My old friend turned about to carry my answer to the Indians. I prefently heard them approaching and calling for Puc-Puggy. Starting up to escape from their fight by a back door, a party confifting of three young fellows, richly dreffed and ornamented, ftepped in, and with a countenance and action of noble fimplicity, amity and complaifance, requefted me to accompany them to their encampment. I defired them to excufe me at this time; they pleaded and entreated me to go with them, in order to free them from a great rattle fnake which had entered their camp; that none of them had freedom or courage to expel him; and understanding that it was my pleafure to collect all their animals and other natural productions of their land, defired that I would come with them and take him away, that I was welcome to him. I at length confented and attended on them to their encampment, where I beheld the Indians greatly difturbed indeed. The men with flicks and tomahawks, and the women and children collected together at a distance in affright and trepidation, whilst the dreaded and revered ferpent leifurely traverfed their camp, visiting the fire places from one to another, picking up fragments of their provisions and licking their platters. The men gathered around me, exciting me to remove him: being armed with a lightwood knot, I approached the reptile, who inftantly collected himfelf in a vaft coil (their attitude of defence) I caft my miffile weapon at him, which luckily taking his head, difpatched him inftantly, and laid him trembling at my feet. I took out my knife, fevered his head from his body, then turning about, the Indians complimented me with every demonstration of fatisfaction and approbation for my heroism, and friendship for them, I carried off Sź the

the head of the ferpent bleeding in my hand as a trophy of victory; and taking out the mortal fangs. deposited them carefully amongst my collections. had not been long retired to my apartment, before I was again rouled from it by a tumult in the yard : and hearing Puc-Puggy called on, I flarted up, when inftantly the old interpreter met me again, and told me the Indians were approaching in order to fcratch me. I asked him for what? he answered for killing the rattle fnake within their camp. Before I could make any reply or effect my escape, three young fellows finging, arm in arm, came up to me. I observed one of the three was a young prince who had, on my first interview with him, declared himfelf my friend and protector, when he told me that if ever occasion should offer in his prefence, he would rifk his life to defend mine or my property. This young champion flood by his twoaffociates, one on each fide of him : the two affecting a countenance and air of difpleafure and importance, inftantly prefenting their fcratching inftruments, and flourishing them, fpoke boldly, and faid that I was too heroic and violent, that it would be good for me to lofe fome of my blood to make me more mild and tame, and for that purpose they were come to fcratch me. They gave me no time to expostulate or reply, but attempted to lay hold on me, which I refifted; and my friend, the young prince, interpoled and puffed them off, faying that I was a brave warrior and his friend; that they should not infult me; when instantly they altered their countenance and behaviour : they all whooped in chorus, took me friendly by the hand, clapped me on the shoulder, and laid their hands on their breafts in token of fincere friendship, and laughing aloud, faid I was a fincere friend to the Siminoles, a wora

### NORTH AMERICA.

a worthy and brave warrior, and that no one fhould hereafter attempt to injure me. They then all three joined arm in arm again and went off, fhouting and proclaiming Puc-Puggy was their friend, &c. Thus it feemed that the whole was a ludicrous farce to fatisfy their people and appeale the manes\* of the dead rattle fnake.

The next day was employed by the Indians in preparations for their departure, fuch as taking up their goods from the trading houfe, collecting together their horfes, making up their packs, &c. and the evening joyfully fpent in fongs and dances. The fucceeding morning after exhibiting the war farce they decamped, proceeding on their expedition against their enemy.

\* Thefe people never kill the rattle fnake or any other ferpent, faying if they do fo, the fpirit of the killed fnake will excite or influence his living kindred or relatives to revenge the injury or violence done to him when alive,

# CHAP.

# СНАР. Х.

BUT let us again refume the fubject of the rattle fnake; a wonderful creature, when we confider his form, nature and difpofition. It is certain that he is capable by a puncture or fcratch of one of his fangs, not only to kill the largest animal in America, and that in a few minutes time, but to turn the whole body into corruption; but fuch is the nature of this dreadful reptile, that he cannot run or creep faster than a man or child can walk, and he is never known to ftrike until he is first affaulted or fears himfelf in danger, and even then always gives the earliest warning by the rattles at the extremity of the tail. I have in the courfe of my travels in the Southern flates (where they are the largeft, most numerous and supposed to be the most venemous and vindictive) ftept unknowingly fo clofe as almost to touch one of them with my feet, and when I perceived him he was already drawn up in circular coils ready for a blow. But however incredible it may appear, the generous, I may fay magnanimous creature lay as still and motionless as if inanimate, his head crouched in, his eyes almost I precipitately withdrew, unlefs when I have fhut. been fo fhocked with furprife and horror as to be in a manner rivetted to the fpot, for a fhort time not having ftrength to go away; when he often flowly extends himfelf and quietly moves off in a direct line, unless purfued, when he erects his tail as far as the rattles extend, and gives the warning alarm by intervals. But if you purfue and overtake him with a fhew of enmity, he inftantly throws himfelf into the

#### NORTH AMERICA.

the fpiral coil; his tail by the rapidity of its motion appears like a vapour, making a quick tremulous found; his whole body fwells through rage, continually rifing and falling as a bellows; his beautiful particoloured fkin becomes fpeckled and rough by dilatation; his head and neck are flattened, his cheeks fwollen and his lips conftricted, difcovering his mortal fangs; his eyes red as burning coals, and his brandifhing forked tongue of the colour of the hotteft flame, continually menaces death and deftruction, yet never ftrikes unlefs fure of his mark.

The rattle inake is the largest ferpent yet known to exift in North America. I have heard of their having been feen formerly, at the first fettling of Georgia, feven, eight and even ten feet in length. and fix or eight inches diameter; but there are none of that fize now to be feen; yet I have feen them above fix feet in length, and above fix inches in thicknefs, or as large as a man's leg; but their general fize is four, five, and fix feet in length. They are fupposed to have the power of fascination in an eminent degree, fo as to inthral their prey. It is generally believed that they charm birds, rabbits, squirrels and other animals, and by stedfastly looking at them posses them with infatuation: be the caufe what it may, the miferable creatures undoubtedly strive by every possible means to escape, but alas! their endeavours are in vain, they at last lose the power of refistance, and flutter or move flowly, but reluctantly, towards the yawning jaws of their devourers, and creep into their mouths, or lie down and fuffer themfelves to be taken and fwallowed.

Since,

Since, within the circle of my acquaintance, I am known to be an advocate or vindicator of the benevolent and peaceable difpofition of animal creation in general, not only towards mankind, whom they feem to venerate, but also towards one another, except where hunger or the rational and neceffary provocations of the fenfual appetite interfere, I shall mention a few instances, amongst many, which I have had an opportunity of remarking during my travels, particularly with regard to the animal I have been treating of. I shall strictly confine myself to facts.

When on the fea coaft of Georgia, I confented, with a few friends, to make a party of amufement at fishing and fowling on Sapello, one of the fea coaft iflands. We accordingly defcended the Alatamaha, croffed the found and landed on the North end of the island, near the inlet, fixing our encampment at a pleafant fituation, under the fhade of a grove of Live Oaks and Laurels\*, on the high banks of a creek which we afcended, winding through a falt marsh, which had its source from a swamp and favanna in the ifland: our fituation elevated and open, commanded a comprehensive landscape : the great ocean, the foaming furf breaking on the fandy beach, the fnowy breakers on the bar, the endlefs chain of iflands, checkered found and high continent all appearing before us. The diverting toils of the day were not fruitlefs, affording us opportunities of furnishing ourfelves plentifully with a variety of game, fifh and oyfters for our fupper.

About two hundred yards from our camp was a cool fpring, amidit a grove of the odoriferous My-

\* Magnolia grandiflora, called by the inhabitants the Laurel.

rica : the winding path to this falubrious fountain led through a graffy favanna. I vifited the fpring feveral times in the night, but little did I know, or any of my careless drowfy companions, that every time we visited the fountain we were in imminent danger, as I am going to relate. Early in the morning, excited by unconquerable thirst, I arofe and went to the fpring; and having, thoughtlefs of harm or danger, nearly half past the dewy vale, along the ferpentine foot path, my hafty fteps were fuddenly flopped by the fight of a hideous ferpent, the formidable rattle fnake, in a high fpiral coil, forming a circular mould half the height of my knees, within fix inches of the narrow path. As foon as I recovered my fenfes and ftrength from fo fudden a furprife, I started back out of his reach, where I flood to view him: he lay quiet whilft I furveyed him, appearing no way furprifed or difturbed, but kept his half-fhut eyes fixed on me. My imagination and fpirits were in a tumult, almost equally divided betwixt thankfgiving to the fupreme Creator and preferver, and the dignified nature of the generous though terrible creature, who had fuffered us all to pass many times by him during the night, without injuring us in the least, although we muft have touched him, or our fteps guided therefrom by a fupreme guardian fpirit. I haftened back to acquaint my affociates, but with a determination to protect the life of the generous ferpent. 1 prefently brought my companions to the place, who were, beyond expression, surprised and terrified at the fight of the animal, and in a moment acknowledged their efcape from destruction to be miraculous; and I am proud to affert, that all of us, except. one perfon, agreed to let him lie undiffurbed, and.

265

that

that perfon at length was prevailed upon to fuffer him to escape.

Again, when in my youth, attending my father on a journey to the Catfkill mountains, in the government of New-York; having nearly afcended the peak of Giliad, being youthful and vigorous in the pursuit of botanical and novel objects, I had gained the fummit of a fteep rocky precipice, a-head of our guide; when just entering a shady vale, I faw at the root of a fmall fhrub, a fingular and beautiful appearance, which I remember to have instantly apprehended to be a large kind of Fungus which we call Jew's ears, and was just drawing back my foot to kick it over; when at the inftant, my father being near, cried out, a rattle fnake my fon : and jerked me back, which probably faved my life. I had never before feen one. This was of the kind which our guide called a yellow one, it was very beautiful, fpeckled and clouded. My father pleaded for his life, but our guide was inexorable, faying he never spared the life of a rattle snake, and killed him; my father took his fkin and fangs.

Some years after this, when again in company with my father on a journey into Eaft Florida, on the banks of St. Juan, at Fort Picolata, attending the congrefs at a treaty between that government and the Creek Nation, for obtaining a territory from that people to annex to the new government; after the Indians and a detachment from the garrifon of St. Augustine had arrived and encamped feparately, near the fort, fome days elapfed before the businefs of the treaty came on, waiting the arrival of a veffel from St. Augustine, on board of which were the prefents for the Indians. My father employed this time of leifure in little excurfions

fions round about the fort; and one morning. being the day the treaty commenced, I attended him on a botanical excursion. Some time after we had been rambling in a fwamp about a quarter of a mile from the camp, I being a-head a few paces, my father bid me observe the rattle snake before and just at my feet. I stopped and faw the monster formed in a high fpiral coil, not half his length from my feet : another ftep forward would have put my life in his power, as I must have touched if not flumbled over him. The fright and perturbation of my fpirits at once excited refentment; at that time I was entirely infenfible to gratitude or mercy. I instantly cut off a little fapling and foon difpatched him: this ferpent was about fix feet in length, and as thick as an ordinary man's leg. The rencounter deterred us from proceeding on our refearches for that day. So I cut off a long tough withe or vine, which fastening round the neck of the flain ferpent, I dragged him after me, his fcaly body founding over the ground, and entering the camp with him in triumph, was foon furrounded by the amazed multitude, both Indians and my country-The adventure foon reached the ears of the men. commander, who fent an officer to request that, if the fnake had not bit himfelf, he might have him ferved up for his dinner. I readily delivered up the body of the fnake to the cooks, and being that day invited to dine at the governor's table, faw the fnake ferved up in feveral diffes; governor Grant being fond of the flesh of the rattle fnake. I tafted of it but could not fwallow it. I, however, was forry after killing the ferpent, when cooly recollecting every circumftance. He certainly had it in his power to kill me almost instantly, and I make no doubt but that he was confcious of it. I promifed

mifed myfelf that I would never again be acceffary to the death of a rattle fnake, which promife I havé invariably kept to. This dreaded animal is eafily killed; a ftick no thicker than a man's thumb is fufficient to kill the largeft at one ftroke, if well directed, either on the head or acrofs the back; nor can they make their efcape by running off, nor indeed do they attempt it when attacked.

The moccafin fnake is a large and horrid ferpent to all appearance, and there are very terrifying ftories related of him by the inhabitants of the Southern flates, where they greatly abound, particularly in East Florida: that their bite is always incurable, the flefh for a confiderable fpace about the wound rotting to the bone, which then becomes carious, and a general mortification enfues, which infallibly deftroys the patient; the members of the body rotting and dying by piecemeal : and that there is no remedy to prevent a lingering milerable death but by immediately cutting away the flefh to the bone, for fome diffance round about the wound. In fhape and proportion of parts they much refemble the rattle fnake, and are marked or clouded much after the fame manner, but the colours more dull and obscure; and in their disposition feem to agree with that dreadful reptile, being flow of progreffion, and throwing themfelves in a fpiral coil ready for a blow when attacked. They have one peculiar quality, which is this, when difcovered, and observing their enemy to take notice of them, after throwing themfelves in a coil, they gradually raife their upper mandible or jaw until it falls back nearly touching their neck, at the fame time flowly vibrating their long purple forked tongue, their crooked poifonous fangs directed right at you, which gives the creature

# NORTH AMERICA.

creature a most terrifying appearance. They are from three to four and even five feet in length, and as thick as a man's leg; they are not numerous, yet too common, and a fufficient terror to the miferable naked flaves, who are compelled to labour in the fwamps and low lands where only they abound.

I never could find any that knew an inftance of any perfon's lofing their life from the bite of them, only by hearfay. Yet I am convinced it is highly prudent for every perfon to be on their guard against them. They appear to be of the viper tribe, from their fwelling of their body and flattening their neck when provoked, and from their large poifonous fangs: their head, mouth and eyes are remarkably large.

There is another fnake in Carolina and Florida called the moccafin, very different from this; which is a very beautiful creature, and I believe not of a destructive or vindictive nature. These when grown to their greatest fize are about five feet in length, and near as thick as a man's arm; their fkin fcaly but fmooth and fhining, of a pale grey and fky cofour ground, uniformly marked with transverse undulatory ringlets or blotches of a deep nut brown. edged with red or bright Spanish brown. They appear innocent, very active and fwift, endeavouring to escape from one; they have no poisonous fangs. These are seen in high forest lands, about rotten logs or decayed fallen limbs of trees, and they harbour about old log buildings. They feem to be a fpecies, if not the very fame make which, in Penfylvania and Virginia, is called the wampom fnake; but here in warmer Southern climes they grow to a much larger fize, and from the fame accident their colour may be more variable and deeper. They are by the

270

the inhabitants afferted to be dangeroufly venemous, the bite incurable, &c. But as I could never learn an inftance of their bite being mortal or attended with any dangerous confequence, and have had frequent opportunities of obferving their nature and difpofition, I am inclined to pronounce them an innocent creature, with refpect to mankind.

The baftard rattle fnake, by fome called ground rattle fnake, is a dangerous little creature: their bite is certainly mortal if prefent medical relief is not adminifered : they feem to be much of the nature of the afp or adder of the old world.

This little viper is in form and colour much like the rattle fnake, but not fo bright and uniformly marked: their head is broader and fhorter in proportion to the other parts of their body: their nofe prominent and turned upwards : their tail becomes fuddenly fmall from the vent to the extremity, which terminates with three-minute articulations, refembling rattles: when irritated they turn up their tail, which vibrates fo quick as to appear like a mist or vapour, but causes little or no found or noife; yet it is the common report of the inhabitants, that they caufe that remarkable vehement noife, fo frequently observed in forests in the heat of fummer and autumn, very terrifying to strangers, which is, probably, caused by a very fable small infect of the genus cicadae, or which are called locufts in America; yet it is poffible I may be mistaken in this conjecture. This dangerous viper is from eight to ten inches in length, and of proportionable thicknefs. They are fpiteful, fnappifh creatures; and throwing themfelves into a little coil, they fwell and flatten themfelves, continually darting out their head: and they feem capable of fpringing fpringing beyond their length. They feem defitute of the pacific difposition and magnanimity of the rattle fnake, and are unworthy of an alliance with him. No man ever faves their lives, yet they remain too numerous, even in the oldest fettled parts of the country.

The green fnake is a beautiful innocent creature: they are from two to three feet in length, but not fo thick as a perfon's little finger; of the fineft green colour. They are very abundant, commonly feen on the limbs of trees and fhrubs: they prey upon infects and reptiles, particularly the little green chameleon: and the forked tailed hawk or kite feeds on both of them, fnatching them off the boughs of the trees.

The ribband fnake is another very beautiful innocent ferpent: they are eighteen inches in length, and/about the thicknefs of a man's little finger; the head is very fmall; the ground colour of a full, clear vermilion, variegated with transfere bars or zones of a dark brown, which people fancy reprefents a ribband wound round the creature's body: they are altogether inoffensive to man, and are in a manner dometic, frequencing old wooden buildings, open grounds and plantations.

The chicken fnake is a large, flrong and fwift ferpent, fix or feven feet in length, but fcarcely fo thick as a man's wrift; they are of a cinereous, earthly colour, and ftriped longitudinally with broad lines or lifts, of a dufky or blackifh colour. They are a domeftic fnake, haunting about houfes and plantations; and would be useful to man if tamed and properly tutored, being great devourers of rats, but but they are apt to difturb hen roofts and prey upon chickens. They are as innocent as a worm with refpect to venom, are eafily tamed and foon become very familiar.

The pine or bull fnake is very large and inoffenfive with refpect to mankind, but devours fquirrels, birds, rabbits, and every other creature it can take as food. They are the largest fnake yet known in North America, except the rattle inake, and perhaps exceed him in length : they are pied black and white: they utter a terrible loud hifling notie, founding very hollow and like diftant thunder, when irritated, or at the time of incubation, when the males contend with each other for the defired female. These serpents are also called horn snakes, from their tail terminating with a hard, horny fpur, which they vibrate very quick when diffurbed, but they never attempt to ftrike with it; they have dens in the earth, whither they retreat precipitately when apprehenfive of danger.

There are many other species of fnakes in the regions of Florida and Carolina; as the water fnake, black fnake, garter fnake, copper belly, ring neck, and two or three varieties of vipers, besides those already noticed in my journal. Since I have begun to mention the animals of these regions, this may be a proper place to enumerate the other tribes which I observed during my perigrinations. I shall begin with the frogs (RANAE.)

(1) The largest frog known in Florida and on the fea coast of Carolina, is about eight or nine inches in length from the nose to the extremity of the toes: they are of a dufky brown or black colour on the upper fide, and their belly or under fide white

white, fpotted and clouded with dufky fpots of various fize and figure; their legs and thighs alfo are variegated with transverse ringlets, of dark brown or black; and they are yellow and green about their mouth and lips. They live in wet fwamps and marshes, on the shores of large rivers and lakes; their voice is loud and hideous, greatly refembling the grunting of a fwine; but not near as loud as the voice of the bull frog of Virginia and Pennfylvania; neither do they arrive to half their fize, the bull frog being frequently eighteen inches in length, and their roaring as loud as that of a bull.

(2) The bell frog, fo called becaufe their voice is fancied to be exactly like the found of a loud cow bell. This tribe being very numerous, and uttering their voices in companies or by large diftricts, when one begins another anfwers; thus the found is caught and repeated from one to another, to a great diftance round about, caufing a furprifing noife for a few minutes, rifing and finking according"as the wind fits, when it nearly dies away, or is foftly kept up by distant districts or communities : thus the noife is repeated continually, and as one becomes familiarifed to it, is not unmufical, though at first, to strangers, it feems clamorous and . difgusting.

(3) A beautiful green frog inhabits the graffy, marshy shores of these large rivers. They are very numerous, and their noife exactly refembles the barking of little dogs, or the yelping of puppies: these likewise make a great clamour, but as their notes are fine, and uttered in chorus, by feparate bands or communities, far and near, rifing and falling with the gentle breezes, affords a pleafing kind of mufic.

273

(4) There

(4) There is befides this a lefs green frog, which is very common about houfes: their notes are remarkably like that of young chickens: thefe raife their chorus immediately preceding a flower of rain, with which they feem delighted.

(5) A little grey fpeckled frog is in prodigious numbers in and about the ponds and favannas on high land, particularly in Pine forefts: their language or noife is alfo uttered in chorus, by large communities or feparate bands; each particular note refembles the noife made by firiking two pebbles together under the furface of the water, which when thoufands near you utter their notes at the fame time, and is wafted to your ears by a fudden flow of wind, is very furprifing, and does not ill refemble the rufhing noife made by a vaft quantity of gravel and pebbles together, at once precipitated from a great height.

(6) There is yet an extreme diminutive fpecies of frogs, which inhabits the graffy verges of ponds in favannas: thefe are called favanna crickets, are of a dark afh or dufky colour, and have a very picked nofe. At the times of very great rains, in the autumn, when the favannas are in a manner inundated, they are to be feen in incredible multitudes clambering up the tall grafs, weed, &c. round the verges of the favannas, bordering on the higher ground; and by an inattentive perfon might be taken for fpiders or other infects. Their note is very feeble, not unlike the chattering of young birds or crickets.

(7) The fhad frog, fo called in Pennfylvania from their appearing and croaking in the fpring feafon, at the time the people fifh for fhad: this is a beautiful

beautiful spotted frog, of a slender form, five or fix inches in length from the nofe to the extremities; of a dark olive green, blotched with clouds and ringlets of a dufky colour : thefe are remarkable jumpers and enterprifing hunters, leaving their ponds to a great distance in fearch of prey. They abound in rivers, fwamps and marshes, in the Southern regions; in the evening and fultry fummer days, particularly in times of drought, are very noify; and at fome diftance one would be almost perfuaded that there were affemblies of men in ferious debate. These have also a fucking or clucking noife, like that which is made by fucking in the tongue under the roof of the mouth. These are the kinds of water frogs that have come under my obfervation; yet I am perfuaded that there are yet remaining feveral other fpecies.

(8) The high land frogs, commonly called toads, are of two fpecies, the red and black. The former, which is of a reddifh brown or brick colour, is the largest, and may weigh upwards of one pound when full grown: they have a difagreeable look, and when irritated, they fwell and raife themfelves up on their four legs and croak, but are no ways venemous or hurtful to man. The other species are one third lefs, and of a black of the dufky colour. The legs and thighs of both are marked with blotches and ringlets of a darker colour, which appear more confpicuous when provoked : the fmaller black species are the most numerous. Early in the fpring feafon, they affemble by numberlefs multitudes in the drains and ponds, when their univerfal croaking and fhouts are great indeed, yet in fome degree not unharmonious. After this breeding time they crawl out of the water and fpread themfelves T .2 all

all over the country. Their fpawn being hatched in the warm water, the larva is there nourifhed, paffing through the like metamorphofes as the water frogs; and as foon as they obtain four feet, whilft yet no larger than crickets, they leave the fluid nurfery-bed, and hop over the dry land after their parents.

The food of these amphibious creatures, when out of the water, is every kind of infect, reptile, &c. they can take, even ants and spiders; nature having furnished them with an extreme long tongue, which exudes a viscid or glutinous liquid, they being fecreted under covert, fpring fuddenly upon their prey, or dart forth their tongue as quick as lightning, and instantly drag into their devouring jaws the unwary infect. But whether they prey upon one another, as the water frogs do, I know not.

There are feveral fpecies of the lizard kind befides the alligator, which is by naturalists allowed to be a fpecies of that genus.

The green lizard or little green chameleon is a pretty innocent creature: the largeft I have feen were imore than feven inches in length: they appear conmercially of a fine green colour, having a large red gill under their throat: they have the faculty of changing colour, which, notwithftanding the fpecious reafoning of phyfiologifts, is a very furprifing phenomenon. The ftriped lizard, called fcorpion, and the blue bellied fquamous lizards I have already mentioned. There is a large copper coloured lizard, and a very flender one of a fine blue colour, and very fwift; the tail of this laft, which is very long and flender, is as fubject to be broken off as that of the glafs fnake. Thefe two laft

L

last are become very fcarce, and when feen are difcovered about old log buildings.

Here are feveral species of the tortoile, befides those already mentioned; as the fmall land tortoife, already defcribed by every traveller. There is a good figure and defcription of him in G. Edwards's Gl. Nat. Hift. vol. II. p. 205. There are two fpecies of fresh-water tortoiles inhabiting the tide water rivers; one of which is large, weighing ten or twelve pounds, the back shell of nearly an oval form, and raifed very high, the belly fhell flat and entire, but deeply fcolloped oppofite The other fpecies are fmall, comthe legs. paratively, and the back shell lightly raifed : both species are food for mankind and effeemed delicious.

Of beafts, the otter (lutra) is common, but more fo in West-Florida, towards the mountains. The feveral species of mustela are common; as the mink, weafel and polecat (putorius). Racoons and opoffums are in great abundance; thefe animals are efteemed delicious and healthy food. There are two fpecies of wild-rats; but neither of them near as large as the European houfe-rat, which are common enough in the fettlements of the white people. Here are very few mice; yet I have feen fome, particularly in Charleston. I faw two in a little wire cage, at a gentleman's houfe, which were as white as fnow, and their eyes red. There are vet a few beavers in East-Florida and Georgia, but they abound most in the North of Georgia, and in West-Florida, near the mountains. But the musk, rat (caftor cauda lanceolata) is never feen in Carolina, Georgia or Florida, within one hundred miles of the fea coaft, and very few in the most northern

northern parts of thefe regions; which must be confidered as a most favourable circumstance, by the people in countries where there is fo much banking ' and draining of the land, they being the most deftructive creatures to dykes.

The roe-buck I have already mentioned. The bears are yet too numerous: they are a firong creature, and prey on the fruits of the country, and will likewife devour young calves, fwine and fheep; but I never could learn a well attested instance of their attacking mankind. They weigh from five hundred to fix hundred weight when full grown and fat: their flesh is greatly effecemed as food by the natives.

The wild cat, felis cauda truncata, (lynx) is common enough; it is a fierce and bold little animal, preying on young pigs, fawns, turkeys, &c. They are not half the fize of a common cur dog, are generally of a greyifh colour, and fomewhat tabbied; their fides bordering on the belly are varied with yellowifh brown fpots, and almost black waving ftreaks, and brindled. I have been credibly informed that the wolves here are frequently feen pied, black and white, and of other mixed colours. They affemble in companies in the night time, howl and bark altogether, especially in cold winter nights, which is terrifying to the wandering bewildered traveller.

The foxes of Carolina and Florida are of the fmaller red fpecies; they bark in the night round about plantations, but do not bark twice in the fame place; they move precipitately, and in a few minutes are heard on the opposite fide of the plantation, or at a great diffance: it is faid that dogs are terrified at the noife, and cannot be perfuaded or compelled to purfue them. They commit depredations on young pigs, lambs, poultry, &c.

The mole is not fo common here as in the northern estates.

The bats of Florida feem to be the fame fpecies of those in Pennfylvania and Virginia, and very little different from the European.

Here are feveral fpecies of fquirrels, (fciurus) peculiar to the lower countries, or maritime parts of Carolina and the Floridas, and fome of them are very beautiful creatures.

The great black fox fquirrel is above two feet in length from the nofe to the end of the tail, which for about two inches is milk white, as are the ears and nofe. The red fox fquirrel is of the fame fize and form, of a light reddifh brown upper fide, and white under fide, the ears and tip end of the tail white.

The grey fox fquirrel is rather larger than either of the foregoing; their belly white, as are the ears, nofe, and tip of the tail. These three feem to be varieties of the fame species.

The common grey fquirrel is about half the fize of the preceding.

The black fquirrel is about the fame fize, and all over of a fhining jet black.

The little grey fquirrel is much lefs than either of the preceding species; it is of a brownish grey upper fide, and white belly.

The

The ground fquirrel, or little ftriped fquirrel of Pennfylvania and the northern regions, is never feen here, and very rarely in the mountains north-weft of thefe territories; but the flying fquirrel, (fciurus volans) is very common.

The rabbit (lepus minor, cauda abrupta, pupillis atris) is pretty common, and no ways differing from those of Pennfylvania and the northern states.

Having mentioned most of the animals in these parts of America, which are most remarkable or useful, there remains, however, yet some observations on birds, which by some may be thought not impertiment.

There are but few that have fallen under my obfervation, but have been mentioned by the zoologifts, and most of them very well figured in Catefby's, or Edwards's works.

But these authors have done very little towards elucidating the fubject of the migration of birds, or accounting for the annual appearance and difappearance, and vanishing of these beautiful and entertaining beings, who vifit us at certain flated feafons. Catefby has faid very little on this curious fubject; but Edwards more, and perhaps all, or as much as could be faid in truth, by the most able and ingenious, who had not the advantage and opportunity of ocular observation; which can only be acquired by travelling, and refiding a whole year at least in the various climates from north to fouth, to the full extent of their peregrinations; or minutely examining the tracts and observations of curious and industrious travellers who have published their memoirs on this fubject. There may perhaps be fome perfons who confider this enquiry not to

be

be productive of any real benefit to mankind, and pronounce fuch attention to natural hiftory merely fpeculative, and only fit to amufe and entertain the idle virtuolo; however the ancients thought otherwife: for with them, the knowledge of the paffage of birds was the fludy of their priefts and philofophers, and was confidered a matter of real and indifpenfable ufe to the flate, next to aftronomy; as we find their fyftem and practice of agriculture was in a great degree regulated by the arrival and difappearance of birds of paffage; and perhaps a calendar under fuch a regulation at this time, might be ufeful to the hufbandman and gardener.

But however attentive and observant the ancients were on this branch of fcience, they feem to have been very ignorant or erroneous in their conjectures concerning what became of birds, after their difappearance, until their return again. In the fouthern and temperate climates fome imagined they went to the moon: in the northern regions they fuppofed that they retired to caves and hollow trees, for thelter and fecurity, where they remained in a dormant flate during the cold feafons: and even at this day, very celebrated men have afferted that fwallows (hirundo) at the approach of winter, voluntarily plunge into lakes and rivers, defcend to the bottom, and there creep into the mud and flime, where they continue overwhelmed by ice in a torpid state, until the returning fummer warms them again into life; when they rife, return to the furface of the water, immediately take wing, and again people the air. This notion, though the lateft, feems the most difficult to reconcile to reason and common sense, respecting a bird fo fwift of flight that it can with eafs and pleafure move through the air

air even fwifter than the winds, and in a few hours time fhift twenty degrees from north to fouth, even from frozen regions to climes where froft is never feen, and where the air and plains are replenished with flying infects of infinite variety, its favourite and only food.

Pennfylvania and Virginia appear to me to be the climates in North-America, where the greatest variety and abundance of these winged emigrants choofe to celebrate their nuptials, and rear their offspring, which they annually return with, to their winter habitations, in the fouthern regions of N. America; and most of those beautiful creatures. which annually people and harmonife our forefts and groves, in the fpring and fummer feafons, are birds of paffage from the fouthward. The eagle, i.e. falco leucocephalus, or bald eagle, falco maximus, or great grey eagle, falco major cauda ferrugineo, falco pullarius, falco columbarius, strix pythaulis, strix acclamatus, strix affio, tetrao tympanus, or pheafant of Pennfylvania, tetrao urogallus, or mountain cock or grous of Pennfylvania, tetrao minor five coturnix, or partridge of Pennfylvania, picus, or woodpeckers of feveral fpecies, corvus carnivorus, or raven, corvus frugivora, or crow, corvus glandarius f. corvus criftatus, or blue jay, alauda maxima, regulus atrofuscus minor, or marsh wren, fitta, or nuthatch, meleagris, are perhaps nearly all the land birds which continue the year round in Pennfylvania. I might add to thefe the blue bird, motacilla fialis, mock bird, turdus polyglottos, and fometimes the robin redbreaft, turdus migratorius, in extraordinary warm winters; and although I do not pretend to affert as a known truth, yet it may be found on future observation that

that most of these above mentioned are ftrangers; or not really bred where they wintered; but are more northern families, or fojourners, bound foutherly to more temperate habitations; thus pushing each other foutherly, and posseffing their vacated places, and then back again at the return of fpring.

Very few tribes of birds build, or rear their young, in the fouth or maritime parts of Virginia and Carolina, Georgia and Florida; yet all thefe numerous tribes, particularly of the foft billed kinds, which breed in Pennfylvania, pafs in the fpring feafon through thefe regions in a few weeks time, making but very fhort ftages by the way: and again, but few of them winter there, on their return foutherly; and as I have never travelled the continent fouth of New Orleans, or the point of Florida, where few or none of them are to be feen in the winter, I am entirely ignorant how far fouthward they continue their route, during their abfence from Pennfylvania; but perhaps none of them pafs the tropic.

When in my refidence in Carolina and Florida, I have feen vaft flights of the houfe fwallow (hirurdo pelafgia) and bank martin (hirundo riparia) paffing onward north toward Pennfylvania, where they breed in the fpring, about the middle of March, and likewife in the autumn in September or October, and large flights on their return fouthward. And it is obfervable that they always avail themfelves of the advantage of high and favourable winds, which likewife do all birds of paffage. The pewit, or black cap flycatcher, of Catefby, is the first bird of paffage which appears in the fpring in Pennfylvania, which is generally about the first, or middle

middle of March; and then wherever they appear, we may plant peas and beans in the open grounds, (vicia fativa) French beans (phafeolus) fow raddifhes, (raphanus) lettuce, (lactuca) onions, (cepa) paftinaca, daucus, and almost every kind of efculent garden feeds, without fear or danger from frosts; for although we have fometimes frosts after their first appearance for a night or two, yet not fo fevere as to injure the young plants.

In the fpring of the year the fmall birds of paffage appear very fuddenly in Pennfylvania, which is not a little furprifing, and no lefs pleafing: at once the woods, the groves, and meads, are filled with their melody, as if they dropped down from the fkies. The reafon or probable caufe is their fetting off with high and fair winds from the fouthward; for a ftrong fouth and fouth-weft wind about the beginning of April never fails bringing millions of thefe welcome vifitors.

Being willing to contribute my mite toward<sup>8</sup> illuftrating the fubject of the peregrination of the tribes of birds of N. America, I fhall fubjoin a nomenclature of the birds of paffage, agreeable to my obfervation, when on my travels from New England to New-Orleans, on the Miffiffippi, and point of Florida.

LAND birds which are feen in Pennfylvania, Maryland, Virginia, from S. Carolina, Georgia and Florida, N. and the fea coaft Weftward, to the Apalachian mountains, viz.

\* THESE arrive in Pennfylvania in the fprings feafon from the South, and after building nefts, and rearing their young, return again Southerly in the autumn,

284

+ THESE

<sup>†</sup> THESE arrive in Pennfylvania in the autumn, from the North, where they continue during the winter, and return again the fpring following, I fuppofe to breed and rear their young; and thefe kinds continue their journies as far South as Carolina and Florida.

<sup>‡</sup> THESE arrive in the fpring in Carolina and Florida from the South, breed and rear their young, and return South again at the approach of winter, but never reach Pennfylvania, or the Northern States.

|| THESE are natives of Carolina and Florida, where they breed and continue the year round.

¶ Thefe breed and continue the year round in Pennfylvania.

## STRIX. The Owl.

- + Strix arcticus, capite levi, corpore toto niveo; the great white owl.
- ¶ Strix pythaules, capite aurito, corpore rufo; the great horned owl.
- + Strix maximus, capite aurito, corpore niveo; the great horned white owl.
- ¶ Strix acclamator, capite levi, corpore grifeo; the whooting owl.
- † Strix peregrinator, capite aurito, corpore verficolore; the fharp winged owl.
- Strix affio, capite aurito, corpore ferrugineo; the little fcreech owl.

## VULTUR. The VULTURE.

- || Vultur aura; the turkey-buzzard.
- || Vultur facra; the white tailed vulture.
- H Vultur atratus; black vulture, or carrion crow. FALCO.

### FALCO. Eagle and Hawk.

- ¶ Falco regalis; the great grey eagle.
- F. leucocephalus; the bald eagle.
- F. pifcatorius; the fifting eagle.
- ¶ F. Aquilinus: cauda ferrug. great eagle hawk.
- F. gallinarius; the hen hawk.
- F. pullarius; the chicken hawk.
- \* F. columbarius; the pigeon hawk.
- ¶ F. niger; the black hawk. \* F. ranivorus; the marsh hawk.
- \* F. fparverius; the leaft hawk or fparrow fpark.

## a MILVUS. Kite Hawk.

|| Falco furcatus; the forked tail hawk, or kite.

- || F. glaucus; the fharp winged hawk, of a pale fky-blue colour, the tip of the wings black.
- || F. fubceruleus; the fharp winged hawk, of a dark or dufky blue colour.
- || Pfittacus Carolinienfis; the parrot of Carolina, or parrakeet.

## CORVUS. The Crow kind.

\* Corvus carnivorus; the raven.

- || C. maritimus; the great fea-fide crow, or rook.
- ¶ C. frugivorus; the common crow.
- ¶ C. criftatus, f. pica glandaria; the blue jay.
- TC. Floridanus, pica glandaria minor; the little jay of Florida.
- ¶ Gracula quifcula; the purple jackdaw of the fea coaft.

a Kite hawks. These are characterised by having long sharp pointed wings, being of fwift flight, failing without flapping their wings, lean light bodies, and feeding out of their claws on the wing, as they gently fail round and round.

Pica glundaria cerulea non cristata, the little jay of East Florida.

#### ~ NORTH AMERICA.

- \* Gracula purpurea; the leffer purple jackdaw, or crow blackbird.
- \* Cuculus Carolinienfis; the cuckoo of Carolina.

## Picus. Woodpeckers:

- || Picus principalis; the greatest crested woodpecker, having a white back.
- \* **P.** peilatus; the great red crefted black woodpecker.
- \* P. erythrocephalus; red headed woodpecker.
- \* P. auratus; the gold winged woodpecker.
- ¶ P. Carolinus; the red bellied woodpecker.
- ¶ P. pubefcens; the leaft fpotted woodpecker.
- P. villofus; the hairy, fpeckled and crefted woodpecker.
- ¶ P. varius; yellow bellied woodpecker.
- ¶ Sitta Europea; grey black capped nuthatch.
- † S. varia, ventre rubro; the black capped, red bellied nuthatch.
- † Certhia rufa; little brown variegated creeper.
- \* C. pinus; the pine creeper.
- \* C. picta; blue and white ftriped or pied creeper.
- \* Alcedo alcyon; the great crefted king-fifher.
- \* Trochilus colubris; the humming bird.
- \* Lanius grifeus; the little grey butcher-bird of Pennfylvania.
- \* L. garrulus; the little black capped or butcher bird of Florida.
- \* L. tyrannus; the king bird.
- \* Muscicapa nunciola; the pewit, or black cap flycatcher.
- \* M. criftata; the great crefted yellow bellied flycatcher.
- \* M. rapax; the leffer pewit, or brown and greenish flycatcher.
- \* M. fubviridis; the little olive cold. flycatcher. \* Muscicapa

- \* Muscicapa cantatrix; the little domestic flycatcher or green wren.
- \* M. fylvicola; the little red eyed flycatcher.
- \* Columba Carolinienfis, the turtle dove.
- || C. pafferina; the dove.
- C. migratoria; the pigeon of paffage or wild pigeon.
- \* Alauda magna; the great meadow lark.
- + A campestris; gutture flavo; the sky lark.
- + A. migratoria; corpore toto ferrugineo, the little brown lark.
- Turdus migratorius; the fieldfare, or robin redbreaft.
- \* T. rufus; the great, or fox coloured thrush.
- \* T. polyglottos; the mocking bird.
- \* T. melodes; the wood thrush.
- \* T. minimus, vertice auro; the least golden crown thrush.
- \* Oriolus Baltimore; Baltimore bird or hang neft.
- \* O. fpurius; the goldfinch or icterus minor.
- \* Merula flammula; fand-hill redbird of Carolina.
- \* M. Marilandica; the fummer redbird.
- \* Garrulis auftralis; the yellow breafted chat.
- \* Lucar lividus, apice nigra; the cat bird, or chicken bird.
- ¶ Ampelis garrulus; crown bird, or cedar bird.

## GRANIVOROUS TRIBES.

T Meleagris Americanus; the wild turkey.

- Tetrao lagopus; the mountain cock, or grous.
- T. tympanus; the pheafant of Pennfylvania.
- T. minor, f. coturnix; the quail or partridge.
- Loxia cardinalis; the red bird, or Virginia nightingale.
- + L. rostro forficato; the cross beak.
- \* L. cerulea; the blue crofs beak.

- \* Emberiza oryzivora; (1) the rice bird.\*
- + E. livida; the blue or flate coloured rice bird.
- \* E. varia; (2) the pied rice bird.
- <sup>†</sup> Linaria ciris; the painted finch, or nonpareil.
- L. cyanea; the blue linnet.
- T Carduelis Americanus; the goldfinch.
- + C. minus; the leffer goldfinch.
- + C. pufilus; the least finch.
- Fringilla erythrophthalma; the towhe bird.
- + F. purpurea; the purple finch.
- + F. cannabina; the hemp bird.
- + F. rufa; the red, or fox-coloured ground or hedge sparrow.
- + F. fusca; the large brown white throat sparrow.
- \* Paffer domefticus; the little houfe fparrow or chipping bird.
- \* P. paluftris; the reed fparrow.
- \* P. agreftis; the little field fparrow.
- + P. nivalis; the fnow bird.
- \* Calandra pratenfis; the May bird.
- \* Sturnus prædatorius; the red winged starling, or corn thief.
- S. ftercorarius; the cowpen bird.
- \* Motacilla fialis; the blue bird. (Rubicula Americana, Cat.)
- \* M. fluviatilis; the water wagtail.
- \* M. domestica, (regulus rufus); the house wren.
- ¶ \* M. palustris; (reg. minor) the marsh wren.
- M. Caroliniana; (reg. magnús) the great wren of Carolina, the body of a dark brown, the throat and breaft of a pale clay colour.
- \* Regulus grifeus; the little bluifh grey wren.
- + R. criftatus; the golden crown wren.

\* (1, 2) Are generally supposed to be male and female of the same species (2) or the pied rice bird the male, and (1) or the yellow, the female.

289

R. t

- † R. cristatus alter vertice rubini coloris; the ruby crown wren. (G. Edwards.)
- \* R. peregrinus, gutture flavo; the olive coloured yellow throated wren.
- \* Ruticilla Americana; the redstart.
- \* Lufcinia, f. philomela Americana; the yellow hooded titmoufe.
- \* Parus criftatus; bluish grey crefted titmouse.
- ¶ P. Europæus; the black cap titmoufe.
- \* P. luteus; the fummer yellow bird.
- \* P. cedrus uropygio flavo; the yellow rump.
- \* P. varius; various coloured little finch creeper.
- \* P. peregrinus ; little chocolate breaft titmoufe.
- \* P. aureus vertice rubro; the yellow red pole.
- \* P. aureo vertice; the golden crown flycatcher.
- \* P. viridis gutture nigro; the green black throated flycatcher.
- \* P. alis aureis; the golden winged flycatcher.
- \* P. aureus alis ceruleis; the blue winged yellow bird.
- \* P. grifeus gutture luteo; the yellow throated creeper.
- Hirundo pelaígia cauda aculeata; the houfe fwallow.
- \* H. purpurea; the great purple martin.
- \* H. riparia vertice purpurea; the bank martin.
- \* H. cerdo; the chimney fwallow.
  - ‡ Caprimulgus lucifugus; the great bat, or chuck wills widow.
  - \* C. Americanus; nighthawk, or whip poor will. AMPHIBIOUS, or AQUATIC BIRDS,
- Or fuch as obtain their food, and refide, in and near the water.

#### GRUS. The Crane.

|| Grus clamator, vertice papilloso, corpore ni-

veo remigibus nigris; the great whooping crane.

. ‡ G. pratenfis; corpore cinereo, vertice papillofo; the great favanna crane.

ARDEA. The Heron.

- ¶ Ardea Herodias; the great bluifh grey crefted heron.
- \* A. immaculata; the great white river heron.
- \* A. alba minor; the little white heron.
- <sup>‡</sup> A. purpurea cristata; the little crested purple or blue heron.
- \* A. varia criftata; the grey white crefted heron.
- A. maculata criftata; the fpeckled crefted heron, or crabcatcher.
- \* A. mugitans; the marsh bittern, or Indianh en.
- \* A. clamator, corpore fubcæruleo; the quaw bird, or frogcatcher.
- 1 A. fubfusca stillata; the little brownish spotted bittern.
- 1 A. violacea; the crefted blue bittern, (called poor Job.)
- \* A. virifcens; the green bittern or poke.
- \* A. viriscens minor, the lesser green bittern.
- \* A. parva; the leaft brown and ftriped bittern.
- \* Platalea ajaja; the fpoonbill, feen as far North as Alatamaha river in Georgia.

TANTALUS. The wood Pelican.

Tantalus loculator; the wood pelican.

- T. albus; the white Spanish curlew.
- T. fuscus; the dusky and white Spanish curlew.
- T. pictus; (Ephouskyka Indian) the crying bird, beautifully speckled.
- || T. Ichthyophagus; the gannet; perhaps little different from the Ibis.
- || Numenius alba varia ; the white godwit.
- ¶ N. pectore rufo; the great red breafted god wit. U 2 ¶ N.

- ¶ N. Americana; the greater godwit.
- ¶ N. fluvialis; the redshank or pool fnipe.
- IN. magnus rufus; the great fea coaft curlew.
  - N. minor campestris; the leffer field curlew.
- ¶ N. cinereus; the feafide leffer curlew.
- \* Scolopax Americana rufa; great red woodcock.
- \* S. minor arvenfis; the meadow fnipe.
- \* Tringa rufa; the red cootfooted tringa. .
  - T. cinerea, gutture albo; the white throated cootfooted tringa.
  - T. vertice nigro; black cap cootfooted tringa.
- T. maculata; the fpotted tringa.
- T. grifea; the little pond fnipe.
- T. fusca; the little brown or ash coloured pool fnipe.
- T. parva; the little tringa of the fea fhore, called fand bird.
- \* Morinella Americana ; the turnstone or dottel. + Cygnus ferus ; the wild fwan.
- + Anfer Canadenfis; the Canadian goofe.
- + A. alis cærulis; the blue winged goofe.
- + A. fulcus maculatus; the laughing goofe.
- A. branta, corpore albo, remigibus nigris; the white brant goofe.
- + A. branta grifea maculata; the great particoloured brant, or grey goofe.
- † Anas fera torquata major, caput et collum viridi fplendentia, dorfum grifeo fufcum, pectore rufefcente, fpeculum violaceum; the great wild duck, called duck and mallard.

† A. nigra maxima; the great black duck.

A. bucephala; the bull-neck and buffaloe head.

- + A. fubcærulea; the blue bill.
- + A. leucocephala; the black white faced duck.
- + A. caudacuta; the fprig tail duck.
- + A. ruftica; the little brown and white duck.

† A.

- † A. principalis, maculata; the various coloured duck, his neck and breaft as though ornamented with chains of beads.
- † A minor picta; the little black and white duck called butterback.

#### QUERQUEDULAE Teal.

- \* Anas fponfa; the fummer duck.
- + A. difcors; the blue winged teal.
- + A. migratoria; the least green winged teal.
- \* A. fiftulofa; whiftling duck.
- + Mergus major pectore rufo ; great fishing duck.
- + M. cucullatus; the round crefted duck.
- \* Colymbus migratorius; the eel crow.
- C. Floridanus; the great black cormorant of Florida, having a red beak.
- ¶ C. colubrinus, cauda elongata; the fnake bird of Florida.
- ¶ C. muficus; the great black and white pied diver or loon.
- + Colymbus arcticus; the great speckled diver.
- ¶ C. auritus et cornutus; the little eared brown dobchick.
- T C. minor fuscus; little crefted brown dobchick.
- † Phaæthon aethereus; the tropic bird.
- T Larus albus; the great white gull.
- I. grifeus; the great grey gull.
- 1 L. albus minor; the little white river gull.
- Onocrotalus Americanus; the American fea pelican.
- || Petrella pintada; the pintada bird.
- ¶ Rynchops niger; the fhearwater or razor bill.
- Pelicanus aquilus; the frigate, or man of war bird.
- † P. fula; the booby.
- F Sterna ftolida; the fea fwallow, or noddy.

CHARADRUS.

CHARADRUS. The Plover kind.

- \* Charadrus vociferus; the kildea or chattering plover.
- \* C. maculatus; the great field fpotted plover,
- \* C. minor; the little feafide ring necked plover.
- \* Hæmatopus offrealegus; the will willet or oyfter catcher.
- || Fulica Floridana; the great blue or flate coloured coot of Florida.
- \* Rallus Virginianus; the foree bird or little brown rail, alfo called widgeon in Pennfyl.
- ‡ R. acquaticus minor; the little dark blue water rail.
- \* R. rufus Americanus; the greater brown rail.
- R. major fubcæruleus; the blue or flate coloured water rail of Florida.
- \* Phoenicopterus ruber; the flamingo, feen about the point of Florida, rarely as far N, as St. Augustine,

I am convinced there are yet feveral kinds of land birds, and a great number of aquatic fowl, that have not come under my particular notice; therefore shall leave them to the investigation of future travelling naturalists of greater ability and industry.

There yet remain fome observations on the paffage, and breeding of birds, &c. which may be proper to notice in this place.

I fhall first mention the rice bird, (emberiza oryzivora.) It is the commonly received opinion that they are male and female of the fame species, i. e. the black pied rice bird the male, and a yellowish clay coloured one the female: the last mentioned appearing only in the autumn, when the oryza

oryza zizania are about ripening, yet in my opinion there are fome ftrong circumstances which feem to operate against fuch a conjecture, though generally believed.

In the Ipring, about the middle of May, the black pied rice bird (which is called the male) appears in Pennfylvania; at that time the great yellow ephemera, called May fly, and a fpecies of locusta appear in incredible multitudes, the favorite delicious food of these birds, when they are sprightly, vociferous, and pleasingly tuneful.

When I was at St. Augustine, in E. Florida, in the beginning of April, the fame fpecies of grafshoppers were in multitudes on the fields and commons about the town; when great flights of these male rice birds fuddenly arrived from the South, which by feeding on thefe infects became extremely fat and delicious: they continued here two or three weeks, until their food became fcarce, when they difappeared, I fuppofe purfuing their journey North after the locusta and ephemera; there were a few of the yellow kind, or true rice bird, to be feen amongst them. Now these pied rice birds feem to obferve the fame order and time in their migrations Northerly, with the other fpring birds of paffage, and are undoubtedly on their way to their breeding place; but then there are no females with them, at least not one to ten thousand of the male colour, which cannot be fuppofed to be a fufficient number to pair and breed by. Being in Charleston in the month of June, I observed at a gentleman's door, a cage full of rice birds, that is of the yellow or female colour, who were very merry and vociferous, having the fame variable mufic with the pied

pied or male kind, which I thought extraordinary, and obferving it to the gentleman, he affured me that they were all of the male kind, taken the preceding fpring, but had changed their colour, and would be next fpring of the colour of the pied, thus changing colour with the feafons of the year. If this is really the cafe, it appears they are both of the fame fpecies intermixed, fpring and fall. In the fpring they are gay, vociferous and tuneful birds.

Ampelis garrulus; crown bird or cedar bird, These birds feed on various forts of succulent fruit and berries, affociating in little flocks or flights, and are to be feen in all the regions from Canada to New Orleans on the Miffiffippi, and how much farther South and South-Weft I know not. They obferve no fixed time of appearance in Pennfyl, vania, but are to be feen in a few days every month of the year; fo that it is difficult to determine at what feafon they breed, or where. The longeft period of their appearance in Pennfylvania is in the fpring and first of June, at the time the early cherries are ripe, when they are numerous; and in the autumn when the Cedar berries are ripe (Juniperus Americana; they arrive in large flights, and, with the robins (turdus migratorius) and yellow rump (parus cedrus) foon ftrip those trees of their berries, after which they difappear again; but in November and December they appear in fmaller flights, feeding on the fruit of the Perfimon (Dyofpyros Virgimana;) and fome are feen till March, fubfifting upon Smilax berries, Privet (Ligustrum vulgare) and other permanent fruits; after which they difappear until May and June. I have been informed by fome people in Pennfylvania, that they have found their nefts at these seafons in Pennsylvania.

Linaria

#### NORTH AMERICA.

Linaria ciris (emberiza ciris Linn.) or painted finch, or nonpareil of Catefby, is not feen North of Cape Fear, in North Carolina, and feldom ten miles from the fea coaft, or perhaps twenty or thirty miles, near the banks of great rivers, in fragrant groves of the Orange (Citrus aurantium) Zanthoxylon, Laurus Borbonia, Caffine, Sideroxylon, &c.

Linaria cyanea (tanagra Linn.) the blue linnet, is fuppofed by fome to be the nonpareil, in an early ftage of life, not being yet arrived to his brilliancy and variety of colours; but this is certainly a miltake, for the blue linnet is longer and of a flenderer configuration, and their notes more variable, vehement and fonorous. And they inhabit the continent and fea coaft iflands from Mexico to Nova Scotia, from the fea coaft, Weft beyond the Apalachean and Cherokee mountains. The fongs of the nonpareil are remarkably low, foft and warbling, exceedingly tender and foothing.

Catefby, in his hiftory of Carolina, fpeaking of the cat-bird (mufcicapa vertice nigro) fays, "They have but one note, which refembles the mewing of a cat;" a miftake very injurious to the fame of that bird; he, in reality, being one of our moft eminent fongfters, little inferior to the philomela or mock-bird; and, in fome remarkable inftances, perhaps, exceeds them both, in particular as a buffoon or mimick. He endeavours to imitate every bird and animal, and in many attempts does not ill fucceed, even in rehearfing the fongs, which he attentively liftens to, from the fhepherdefs and rural fwain; and will endeavour and fucceed to admiration, in repeating the melodious and variable airs from inftrumental mufic, and this in his wild ftate

of

of nature. They are a kind of domefic bird during their fpring and fummer refidence in Pennfylvania, building their nefts in gardens and fheltering themfelves in groves near the houfes. They caufe great trouble and vexation to hens that have broods of chickens, by imitating their diftreffing cries, in which they feem to enjoy much delight, and caufe fome amufement to perfons who are diverted at fuch incidents. They are the first bird heard finging in the morning, even before break of day.

They feem to be a tribe of birds feparated by nature from the motacillæ, with which the zoologifts have claffed them, and appear allied to a tribe peculiar to America, to which Edwards has given the name of manakin. In their nature they feem to take place between the thrush (turdus) and motacilla, their beak being longer, stronger, and straighter than the motacilla, and formed for eating fruit, which is their chief food; yet they will feed on reptile infects, but never attempt to take their prey on the wing.

Catefby is chargeable with the like miftake with refpect to the little thrufh (t. minor) and the fox coloured thrufh t. rufus both eminent fingers, and the latter little inferior to the mock-bird. The former for his fhrill, fonorous and elevated ftrains in the high, fhady forefts; and the latter for variety, foftnefs and conftant refponfes in the hedges and groves near houfes.

But yet Catefby has fome right of claim to our excuse and justification, for his detraction of the fame due to these eminent musicians of the groves and forests, when we confider that he resided and made his collections and observations, in the regions ons which are the winter retreats and refidence of these birds, where they rarely fing; as it is observable and most true, that it is only at the time of incubation, that birds fing in their wild state of nature. The cat-bird, great and less thrush and fieldsfare, feldom or never build in Carolina beneath the mountains, except the great or fox coloured thrush in a few instances; but all these breed in Pennfylvania.

The parakeets (pfitacus Carolinienfis) never reach fo far North as Pennfylvania, which to me is unaccountable, confidering they are a bird of fuch fingularly rapid flight, that they could eafily perform the journey in ten or twelve hours from North Carolina, where they are very numerous, and we abound with all the fruits which they delight in.

I was affured in Carolina, that these birds, for a month or two in the coldeft winter weather, houfe themfelves in hollow Cyprefs trees, clinging fast to each other like bees in a hive, where they continue in a torpid flate until the warmth of the returning fpring reanimates them, when they iffue forth from their late dark, cold winter cloifters. But I lived feveral years in North Carolina and never was witnefs to an inftance of it; yet I do not at all doubt but there have been inftances of belated flocks thus furprifed by fudden fevere cold, and forced into fuch shelter, and the extraordinary feverity and perfeverance of the feafon might have benumbed them into a torpid, fleepy ftate; but that they all willingly fhould yield to fo difagreeable and hazardous a fituation does not feem reafonable or natural, when we confider that they are a bird of the fwifteft flight and impatient of fevere cold. They are eafily tamed, when they become docile and familiar, but never learn to imitate the human language.

Both

Both fpecies of the Baltimore bird (oriolus, Linn. icterus, Cat.) are fpring birds of paffage and breed in Pennfylvania; they have loud and mufical notes.

The yellow breafted chat (oenanthe, Cat. motacilla trochilus, Linn.) is in many inftances a very fingular bird; the variablenefs and mimickry of his notes or fpeech, imitating various creatures; and a furprifing faculty of uttering a coarfe, hollow founding noife in their throats or crops, which at times feems to be at a great diftance, though uttered by a bird very near, and vice verfa. They arrive in Pennfylvania from the South, late in the month of May, breed and return again early in autumn.

It is a matter of enquiry, what fhould have induced the zoologifts to clafs this bird with the motacillæ, when they difcover no one characteristic to induce fuch an alliance; this bird having a remarkable thick, ftrong bill, more like the frugivorous tribes: and in my opinion they are guilty of the like overfight in claffing the fummer red-bird with the mufcicapa, this bird having a thick, ftrong bill, approaching nearer the ftarling (fturnus.)

These historical observations being noted, we will again refume the subject of our journey.

## CHAP. XI.

AFTER the predatory band of Siminoles, under the conduct of the Long Warrior, had decamped, Mr. M'Latche invited me with him on a vifit to an Indian town, about twelve miles diffance from the trading-houfe, to regale ourfelves at a feaft of Water Melons and Oranges, the Indians having brought a canoe load of them to the trading-houfe the day preceding, which they difpofed of to the traders. This was a circumftance pretty extraordinary to me, it being late in September, a feafon of the year when the Citruels are ripe and gone in Georgia and Carolina; but here the weather yet continued hot and fultry, and confequently this cool, exhilarating fruit was fill in high relifh and effimation.

After breakfafting, having each of us a Siminole horfe completely equipped, we fat off: the ride was agreeable and varioufly entertaining. We kept no road or pathway conftantly, but as Indian hunting tracks by chance fuited our courfe, riding through high open, pine forefts, green lawns and flowery favannas in youthful verdure and gaity, having been lately burnt, but now overrun with a green enamelled carpet, chequered with hommocks of trees of dark green foliage, interfected with ferpentine rivulets, their banks adorned with fhrubberies of various tribes, as Andromeda formofifima, And. nitida, And. viridis, And. calyculata, And. axillaris, Kalmia fpuria, Annona alba, &c. About noon we arrived at the town, the fame little village I paffed

I paffed by on my alcent of the river, on the banks of the little lake below Charlotia.

We were received and entertained friendly by the Indians, the chief of the village conducting us to a grand, airy pavilion in the centre of the village. It was four-fquare; a range of pillars or pofts on each fide fupporting a canopy composed of Palmetto leaves, woven or thatched together, which shaded a level platform in the centre, that was alcended to from each fide by two fteps or flights, each about twelve inches high, and feven or eight feet in breadth, all covered with carpets or mats, curioufly woven of fplit canes dyed of various colours. Here being feated or reclining ourfelves, after fmoaking tobacco, baskets of the choicest fruits were brought and fet before us.

The fields furrounding the towns and groves were plentifully flored with Corn, Citruels, Pumkins, Squashes, Beans, Peas, Potatoes, Peaches, Figs, Oranges, &c.

Towards evening we took our leave, and arrived at the flores before night, having in the course of the day collected a variety of curious specimens of vegetables, feeds and roots.

The company being buily employed in forming their packs of leather and loading the veffel, and I being eager to augment my collections during my flay here, I croffed the river with a gang of our people, who were transporting a party of horses to range in the meadows and plains on the fide oppofite to the trading-house; we carried them over in a large flat or fcow. The river was here above a mile wide, but divided into a number of streams by numerous

numerous islands, which occasioned the voyage to be very troublesome, as most of the horses were lately taken wild out of their ranges, and many of them young and untutored. Being under the necelfity of paffing near the points of the islands, they grew reftlefs and impatient to land, and it was with great difficulty we kept them on board ; and at laft, when within a quarter of a mile of the opposite shore, passing between two islands, the horses became ungovernable, and most of them plunged into the river and forced over board one of our people. I being a pretty good fwimmer, in the midft of the buffle, and to avoid being beat over and perhaps wounded, leapt out and caught hold of the dock of one of the horfes. We all landed fafe on one of the islands, about one hundred and fifty yards diftance, and the flat followed us. After a deal of trouble and lofs of time, we got the horfes again into the fchow, where fecuring them by withs and vines, we again fat off, and foon landed fafe on the main, at a high bluff or bank of the river, where, after turning the horfes to pasture, and refting ourfelves, we fat off on a vifit to a plantation on the river, fix or eight miles distance. On the way thither we discovered a bee tree, which we cut down, and regaled ourfelves on the delicious honey; leaving one of our companions to protect the remainder until our return with a tub, to collect it and carry it with us; and in the evening we all returned fafe with our fweet booty to the trading-houfe.

The veffel being loaded and ready to depart, I got all my collections on board. My trufty and fortunate bark I prefented to the old interpreter, Job Wiggens, often my travelling companion, friend friend and benefactor; and taking an affectionate and final leave of the worthy C. M'Latche and the whole trading company, we fet fail in a neat little fchooner for Frederica in Georgia, about the laft of September. We had a pleafant and profperous voyage down the grand river St. Juan's, frequently vifiting the plantations on the banks of the river, efpecially at fuch times as oppofed by contrary winds; and according to promife did not neglect calling on the generous and friendly Mr. Marfhall who received me fo politely, and treated me with fuch unparalleled friendship and hospitality, when afcending the river alone laft fpring.

We never once went out to fea during the voyage; for when we had defcended the river below the Cow-ford, we entered the found by a channel between Fort George island and the main, through which we passed, and continued failing between the fea coast islands and the main to Frederica on St. Simon's.

On my arrival at Frederica, I was again, as ufual, friendly received and accommodated by the excellent John Spalding, Efq.; and here learning that the honourable Henry Lawrens, Efq. had a large fhip loading at Sunbury for Liverpool, I determined to embrace fo favourable an offer for conveying my collections to Europe; and hearing at the fame time that Mr. Lawrens was daily expected in a veffel of his own, at his plantations on Broton Ifland and New Hope, in order to take a loading of rice for the cargo of the fhip at Sunbury, I transported my collections to Broton; where meeting with Mr. Lawrens, he generoufly permitted me to put my things on board his veffel, and gave me room with himfelf himfelf in the cabin ; and the merchant in Liverpool, to whom the fhip was configned, being his friend and correspondent, and a friend of Dr. Fothergill's, Mr. Lawrens proposed to recommend my collections and letters to his care.

These favourable circumstances thus co-operating, after bidding adieu to my friends and liberal patrons in these parts, I embarked on board this vessel, and after a flort and pleasant passage through the found, arrived at Sunbury, from whence, after shipping my collections, I set fail again for Charleston, South Carolina; where being arrived, I spent the season in flort excursions until next spring; and during this time of my recess I had leisure to plan my future travels, agreeably to Dr. Fothergill's instructions, and the council and advice of Dr. Chalmers of Charleston, with other gentlemen of that city, eminent for the promotion of science and encouraging merit and industry.

It was agreed that my future rout fhould be directed Welt and South-Welt, into the Cherokee country and the regions of the Muscogulges or Creeks.

## PART II.

## CHAP. I.

APRIL 22d, 1776, I fat off from Charleston for the Cherokee nation, and after riding this day about twenty-five miles, arrived in the evening at Jackfonsburg, a village on Ponpon river. The next day's journey was about the fame diffance, to a public house or inn on the road.

The next day, early in the morning, I fat off again, and about noon ftopped at a public houfe to dine. After the meridian heafs were abated, proceeding on till evening, I obtained good quarters at a private houfe, having rode this day about thirty miles. At this plantation I obferved a large orchard of the European Mulberry tree (Morus alba) fome of which were grafted on flocks of the native Mulberry (Morus rubra); thefe trees were cultivated for the purpofe of feeding filk-worms (phalaena bombyx). Having breakfafted, I fat forward again. I foon

I foon entered a high foreft, continuing the space of fifteen miles to the Three Sifters, a public ferry on Savanna river: the country generally very level; the foil a dark, loofe, fertile mould, on a ftratum of cinereous-coloured tenacious clay; the ground shaded with its native forests, confisting of the great Black Oak, Quercus tinctoria, Q. rubra, Q. phellos, Q. prinos, Q. hemispherica, Juglans nigra, J. rustica, J. exaltata, Magnolia grandiflora, Fraxinus excelsior, Acer rubrum, Liriodendron tulipifera, Populus heterophylla, Morus rubra, Nyffa fylvatica, Platanus occidentalis, Tilia, Ulmus campestris, U. subifer, Laurus fassafras, L. Borbonia, Ilex aquifolium, Fagus fylvatica, Cornus Florida, Halefia, Æfculus pavia, Sambucus, Callicarpa, and Stewartia malachodendron, with a variety of other trees and fhrubs. This ancient fublime forest, frequently intersected with extensive avenues, vistas and green lawns, opening to extensive favannas and far diftant Rice plantations, agreeably employs the imagination, and captivates the fenfes by scenes of magnificence and grandeur.

The gay mock-bird, vocal and joyous, mounts aloft on filvered wings, rolls over and over, then gently defcends, and prefides in the choir of the tuneful tribes.

Having dined at the ferry, I croffed the river into Georgia: on landing and afcending the bank, which has here a North profpect, I obferved the Dirca paluftris, growing fix or feven feet high. I rode about twelve miles further through Pine Forefts and favannas. In the evening I took up my quarters at a delightful habitation, though not a common tavern. Having ordered my horfe a ftable and provender, and refreshed my spirits with a X = X

draught of cooling liquor, I betook mylelf to contemplation in the groves and lawns. Directing my fteps towards the river, I observed in a high Pine forest on the border of a favanna, a great number of cattle herded together, and on my nearer ap. proach difcovered it to be a cow pen; on my coming up I was kindly faluted by my hoft and his wife, who I found were superintending a number of flaves, women, boys and girls, that were milking the cows. Here were about forty milch cows and as many young calves; for in these Southern countries the calves run with the cows a whole year, the people milking them at the fame time. The pen, including two or three acres of ground, more or lefs, according to the flock, adjoining a rivulet or run of water, is enclosed by a fence : in this enclofure the calves are kept while the cows are out at range: a fmall part of this pen is partitioned off to receive the cows, when they come up at evening : here are feveral flakes drove into the ground, and there is a gate in the partition fence for a communication between the two pens. When the milkmaid has taken her fhare of milk, fhe loofes the calf, who ftrips the cow, which is next morning turned out again to range.

I found these people, contrary to what a traveller might, perhaps, reasonably expect, from their occupation and remote fituation from the capital or any commercial town, to be civil and courteous; and though educated as it were in the woods, no strangers to sensibility, and those moral virtues which grace and ornament the most approved and admired characters in civil society.

After the veffels were filled with milk, the daily and liberal fupply of the friendly kine; and the good

good wife, with her maids and fervants, were returning with it to the dairy ; the gentleman was at leifure to attend to my inquiries and observations, which he did with complaifance, and apparent pleafure. On my observing to him that his stock of horned cattle must be very confiderable to afford fo many milch cows at one time, he answered, that he had about fifteen hundred head : " my flock is but young, having lately removed from fome diftance to this place; I found it convenient to part with most of my old stock and begin here anew : Heaven is pleafed to blefs my endeavours and induftry with fuccefs even beyond my own expectations." Yet continuing my interrogatories on this fubject : your flock I apprehend must be very profitable, being fo convenient to the capital and fea port, in affording a vaft quantity of beef, butter and cheefe, for the market, and must thereby contribute greatly towards your emolument : "yes, I find my ftock of cattle very profitable, and I conftantly contribute towards fupplying the markets with beef. but as to the articles of butter and cheefe. I make no more than what is expended in my own houfehold, and I have a confiderable family of black people, who, though they are flaves, must be fed, and cared for : those I have, were either chosen for their good qualities, or born in the family, and I find from long experience and observation, that the better they are fed, clothed and treated, the more fervice and profit we may expect to derive from their labour : in fhort, I find my flock produces no more milk, or any article of food or nourifhment, than what is expended to the best advantage amongst my family and flaves."

He added, come along with me towards the river bank, where I have fome men at work fquaring Pine

Pine and Cyprefs timber for the Weft-India market; I will fhow you their days work, when you will readily grant that I have reafon to acknowledge myfelf fufficiently gratified for the little attention beftowed towards them. At yonder little new habitation near the bluff on the banks of the river, I have fettled my eldeft fon; it is but a few days fince he was married to a deferving young woman.

Having at length arrived near the high banks of the majeftic Savanna, we flood at the timber landing: almost every object in our progress contributed to demonstrate this good man's fystem of economy to be not only practicable but eligible; and the flaves appeared on all fides as a crowd of witneffes to justify his industry, humanity and liberal fpirit.

The flaves comparatively of a gigantic flature, fat and mufcular, were mounted on the maffive timber logs; the regular heavy flrokes of their gleaming axes re-echoed in the deep forefts; at the fame time, contented and joyful, the footy fons of Afric forgetting their bondage, in chorus fung the virtues and beneficence of their mafter in fongs of their own composition.

The log or timber landing is a capacious open area, the lofty pines\* having been felled and cleared away for a confiderable diftance round about, near an almost perpendicular bluff or steep bank of the river, rising up immediately from the water to the height of fixty or feventy feet. The logs being dragged by timber wheels to this yard, and

\* Pinus paluftris, Linn, the long leaved Pitch Pine, or yellow Pine,

landed

1.

landed as near the brink of this high bank as poffible with fafety, and laid by the fide of each other, are rolled off and precipitated down the bank into the river, where being formed into rafts, they are conducted by flaves down to Savanna, about fifty miles below this place.

Having contemplated these fcenes of art and induftry, my venerable hoft, in company with his fon, conducted me to the neat habitation, which is fituated in a spacious airy forest, a little distance from the river bank, commanding a comprehenfive and varied prospect; an extensive reach of the river in front; on the right hand a fpacious lawn or favanna; on the left the timber yard; the vast fertile low lands and forests on the river upwards; and the plantations adjoining. A cool evening arrived after a fultry day. As we approach the door, conducted by the young man, his lovely bride arrayed in native innocence and becoming modefty, with an air and fmile of grace and benignity, meets and falutes us! what a Yenus! what an Adonis! faid I in filent transport; every action and feature feem to reveal the celeftial endowments of the mind: though a native fprightliness and fensibility appear, yet virtue and difcretion direct and rule. The drefs of this beauteous fylvan queen was plain but clean, neat and elegant, all of cotton, and of her own fpinning and weaving.

Next morning early I fat forward profecuting my tour. I purfued the high road leading from Savanna to Augusta for the distance of one hundred miles or more, and then recrossed the river at Silver Bluff, a pleasant villa, the property and feat of G. Golphin, esquire, a gentleman of very distinguished guifhed talents and great liberality, who poffeffed the most extensive trade, connexions and influence, amongst the South and South-West Indian tribes, particularly with the Greeks and Chactaws; of whom I fortunately obtained letters of recommendation and credit to the principal traders residing in the Indian towns.

Silver Bluff is a very celebrated place. It is a confiderable height upon the Carolina fhore of the Savanna river, perhaps thirty feet higher than the low lands on the opposite fhore, which are subject to be overflowed in the fpring and fall. This fteen bank rifes perpendicularly out of the river, difcovering various firata of earth; the furface for a confiderable depth is a locfe fandy loam, with a mixture of fea shells, especially offrex; the next stratum is clay, then fand, next marl, then clays again of various colours and qualities, which last infensibly mix or unite with a deep stratum of blackish or dark flate coloured faline and fulphureous earth, which feems to be of an aluminous or vitriolic quality, and lies in nearly horizontal lamina or ftrata of various thickness. We difcovered bellemnites, pyrites, marcafites and fulphureous nodules, fhining like brafs, fome fingle of various forms, and others conglomerated, lying in this black flaty-like micaceous earth; as alfo flicks, limbs and trunks of trees, leaves, acorns, and their cups, all transmuted or changed black, hard and fhining as charcoal: we alfo fee animal fubstances, as if petrified, or what are called fharks' teeth, (dentes carchariæ); but these heterogeneous substances or petrifactions are the most abundant and confpicuous where there is a loofer kind of earth, either immediately upon this vaft stratum of black earth, or in the divisions of the

the laminæ. The furface of the ground upon thisbluff, extends a mile and a half or two miles on the river, and is from an half mile to a mile in breadth, nearly level, and a good fertile foil; as is evident from the vaft Oaks, Hickory, Mulberry, Black walnut and other trees and fhrubs, which are left standing in the old fields which are spread abroad to a great diftance; and difcovers various monuments and veftiges of the refidence of the ancients; as Indian conical mounts, terraces, areas, &c. as well as remains or traces of fortreffes of regular formation, as if constructed after the modes of European military architects, which are fuppofed to be ancient camps of the Spaniards who formerly fixed themfelves at this place in hopes of finding filver.

But perhaps Mr. Golphin's buildings and improvements will prove to be the foundation of monuments of infinitely greater celebrity and permanency than either of the preceding eftablishments.

The place which at this day is called fort Moore, is a flupendous bluff, or high perpendicular bank of earth, rifing out of the river on the Carolina fhore, perhaps ninety or one hundred feet above the common furface of the water; and exhibits a fingular and pleafing fpectacle to a ftranger, efpecially from the opposite fhore, or as we pass up or down the river, prefenting a view of prodigious walls of party-coloured earths, chiefly clays and marl of various colours, as brown, red, yellow, blue, purple, white, &c. in horizontal ftrata, one over the other.

Waiting for the ferry boat to carry me over, I walked almost round the under fide of the bluff, betwixt its steep wall and the water of the river, which which glided rapidly under my feet. I came to the carcafe of a calf, which the people told me had fallen down from the edge of the precipice above, being invited too far by grafs and fweet herbs, which they fay frequently happens at this place. In early times, the Carolinians had a fort, and kept a good garrifon here as a frontier and Indian trading poft; but Augusta superfeding it, this place was difmantled: and fince that time, which probably cannot exceed thirty years, the river hath fo much encroached upon the Carolina shore, that its bed now lies where the fite of the fort then was: indeed fome told me that the opposite Georgia shore, where there is now a fine house and corn field, occupies the place.

The fite of Augusta is perhaps the most delight. ful and eligible of any in Georgia for a city. An extenfive level plain on the banks of a fine navigable river, which has its numerous fources in the Cherokee mountains, a fruitful and temperate region, whence after roving and winding about those fertile heights, they meander through a fertile hilly country, and one after another combine in forming the Tugilo and Broad rivers, and then the famous Savanna river; thence they continue near an hundred miles more, following its meanders and falls over the cataracts at Augusta, which crofs the river at the upper end of the town. These falls are four or five feet perpendicular height in the fummer feafon when the river is low. From these cataracts upwards, this river with all its tributaries, as Broad river, Little River, Tugilo, &c. is one continued rapid, with fome fhort intervals of ftill water, navigable for canoes. But from Augusta downwards to the ocean, a diftance of near three hundred miles by

by water, the Savanna uninterruptedly flows with a gentle meandring courfe, and is navigable for veffels of twenty or thirty tons burthen to Savanna, where fhips of three hundred tons lie in a capacious and fecure harbour.

Augusta thus seated at the head of navigation, and just below the conflux of several of its most confiderable branches, without a competitor, commands the trade and commerce of vast fruitful regions above it, and from every fide to a great distance: and I do not hesitate to pronounce as my opinion, will very soon become the metropolis of Georgia.\*

I chofe to take this route up Savanna river, in preference to the straight and shorter road from Charlefton to the Cherokee country by fort Ninety Six, becaufe by keeping near this great river, I had frequent opportunities of vifiting its steep banks, waft fwamps and low grounds; and had the advantage without great delay, or deviating from the main high road, of obferving the various foils and fituations of the countries through which this famous river purfues its courfe, and of examining their various productions, mineral, vegetable and animal: whereas had I purfued the great trading path by Ninety fix, I should have been led over a high, dry, fandy and gravelly ridge, and a great part of the distance an old fettled or reforted part of the country, and confequently void of the varieties of original or novel productions of nature.

Before I leave Augusta, I shall recite a curious phenomenon, which may furnish ample matter for

philosophical

<sup>\*</sup> A few years after the above remark, the feat of government was removed from Savanna to Augusta.

philosophical difcussion to the curious naturalist. On the Georgia fide of the river, about fifteen miles. below Silver Bluff, the high road croffes a ridge of high fwelling hills of uncommon elevation, and perhaps feventy feet higher than the furface of the. These hills, from three feet below the comriver. mon vegetative furface, to the depth of twenty or thirty feet, are compoled entirely of follil oyfter fhells, internally of the colour and confiftency of clear white marble; the shells are of incredible magnitude, generally fifteen or twenty inches in length, from fix to eight wide, and two to four in thickness, and their hollows fufficient to receive an ordinary man's foot : they appear all to have been opened before the period of petrifaction, a transmutation they feem evidently to have fuffered; they are undoubtedly very ancient or perhaps antidelu-The adjacent inhabitants burn them to lime vian. for building, for which purpose they ferve very well; and would undoubtedly afford an excellent manure when their lands require it, thefe hills being now remarkably fertile. The heaps of fhells lie upon a ftratum of a yellowifh fandy mould, of feveral feet in depth, upon a foundation of foft white rocks, that has the outward appearance of free-ftone, but on strict examination is really a testaceous concrete or composition of fand and pulverised fea fhells: in fhort, this teftaceous rock approaches near in quality and appearance to the Bahama or Bermudian white rock.

Thefe hills are shaded with glorious Magnolia grandiflora, Morus rubra, Tilia, Quercus, Ulmus, Juglans, &c. with aromatic groves of fragrant Callicanthus Floridus, Rhododendron ferrugineum, Laurus Indica, &c. Æsculus pavia, Cornus Florida, rida, Azalea coccinea, Philadelphus inodorus and others; but who would have expected to fee the Dirca paluftris and Dodecatheon meadea grow in abundance in this hot climate! it is true they are feen in the rich and deep shaded vales, between the hills and North exposure; but they attain to a degree of magnitude and splendour never seen in Pennfylvania.

CHAP.

# CHAP. II.

AFTER conferring with gentlemen in Augusta. converfant in Indian affairs, concerning my future travels in those distant, unexplored regions, and obtaining letters to their agents in the Indian territories, I fet off, proceeding for Fort Jamés Dartmouth, at the confluence of Broad River with Savanna, the road leading me near the banks of the river for the diftance of near thirty miles, croffing two or three of its confiderable branches, befides rivulets and fmaller brooks. The furface of the land uneven, by means of ridges or chains of fwelling hills and corresponding vales, with level downs; the foil a loofe, gravifh-brown loamy mould on the hills, but darker and more cohefive and humid in the vales and downs; this fuperficial, vegetative earth, covers a deep stratum of very tenacious yellowish clay : the downs afford grafs and various herbage ; the vales and hills, foreft trees and fhrubs of various tribes, i. e. Quercus tinctoria, Q. alba, Q. rubra, Q. lobata, Acer rubrum, A. Saccharinum, A. glaucum, Morus rubra, Gleditfia triacanthus, Juglans hickory, various species, Quercus philos, Quer dentata, f. hemispherica, Quercus aquatica, or Maryland Water Oak, Ulmus fylvatica, Liriodendron, Liquid-amber Diofpyros, Cornus Florida, Prunus Indica. Prunus padus and Æsculus pavia; and, near water courfes in the vales, Stewartia malachodendron, Halefia, Æsculus fylvatica, Styrax, Carpinus, Magnolia acuminata, Mag. tripetala, Mag. auriculata, Azalea, &c. The rich humid lands in the vales bordering on creeks and bafes of the hills. likewife produce various trees, fhrubs and plants, as Cercis, Corylus, Ptelea, Evonimus, Philadelphus inodorus,

## NORTH AMERICA.

inodorus, Staphylea trifoliata, Chionanthus, Hamamelis, Callicarpa, Sambucus, Cornus alba, Viburnum dentatum, Spirea opulifolia, Cornus fanguinea, Cephalanthus, &c. and of herbacæ a vaft variety and abundance, as Verbefina, Rudbeckia, Phafeolus, Tripfacum, Aconitum napellus, Delphinium, Angelica lucida, Tradescantia, Trillium feffile Trillium cernuum, Actaa, Chelone, Glycine, apios, Convalliaria racemofa, Mediola, Carduus, Bidens frondofa, Arum tryphillum, Coreopfis alternifolia, Circæa, Commelina, After, Solidago, Eupatorium, Helianthus, and Silphium, together with a variety of other tribes and species new to me. In the evening I arrived at Little river, and took up my quarters at a public house on its banks, near its confluence with the favanna. This is a beautiful rapid water, about fifty yards over. On a branch of this river is fituated the town of Wrightfborough.

Near the ford, on the banks of this river, I first obferved a very curious fhrub, a beautiful evergreen, which appears to be allied to the Rhododendron, though the feed veffels feem to bear more the characteristics of the Kalmia. This shrub grows in coples or little groves, in open, high fituations, where trees of large growth are but fcatteringly planted; many fimple stems arife together from a root or fource erect, four, five and fix feet high; their limbs or branches, which are produced towards the top of the ftems, also ftand nearly erect, lightly diverging from the main ftems, which are furnished with moderately large ovate pointed intire leaves, of a pale or yellowish green colour; these leaves are of a firm, compact texture, both furfaces fmooth and fhining, and ftand nearly erect upon

upon fhort petioles; the branches terminate with long, loofe panicles or fpikes of white flowers, whofe fegments are five, long and narrow.

I arofe early next morning and continued my journey for Fort James. This day's progrefs was agreeably entertaining, from the novelty and variety of objects and views : the wild country now almost depopulated, vast forests, expansive plains and detached groves; then chains of hills whofe gravelly, dry, barren fummits prefent detached piles of rocks, which delude and flatter the hopes and expectations of the folitary traveller, full fure of hospitable habitations; heaps of white, gnawed bones of the ancient buffaloe, elk and deer, indifcriminately mixed with those of men, half grown over with mofs, altogether, exhibit fcenes of uncultivated nature, on reflection, perhaps, rather difagreeable to a mind of delicate feelings and fenfibility, fince fome of these objects recognize past transactions and events, perhaps not altogether reconcileable to justice and humanity.

How harmonious and fweetly murmur the purling rills and fleeting brooks, roving along the fhadowy vales, paffing through dark, fubterranean caverns, or dafhing over fleep rocky precipices, their cold humid banks condenfing the volatile vapours, which falling coalefce in cryftalline drops, on the leaves and elaftic twigs of the aromatic fhrubs and incarnate flowers! In thefe cool, fequeftered, rocky vales, we behold the following celebrated beauties of the hills, fragrant Calycanthus, blufhing Rhododendron ferrugineum, delicate Philadelphus inodorus, which difplays the white wavy mantle, with the fky robed Delphinium, perfumed Convallaria

320

Convallaria and fiery Azalea, flaming on the afcending hills or wavy furface of the gliding brooks. The epithet fiery, I annex to this most celebrated fpecies of Azalea, as being expressive of the appearance of its flowers, which are in general of the colour of the fineft red lead, orange and bright gold, as well as yellow and cream colour; these various fplendid colours are not only in feparate plants, but frequently all the varieties and fhades are feen in feparate branches on the fame plant; and the clufters of the bloffoms cover the fhrubs in fuch incredible profusion on the hill fides, that fuddenly opening to view from dark shades, we are alarmed with the apprehension of the hill being fet on fire. This is certainly the most gay and brilliant flowering fhrub yet known: it grows in little copfes or clumps, in open forefts as well as dark groves, with other fhrubs, and about the bafes of hills, efpecially where brooks and rivulets wind about them : the bushes feldom rife above fix or feven feet in height, and generally but three, four and five, but branch and spread their tops greatly; the young leaves are but very small whilft the shrubs are in bloom, from which circumftance the plant exhibits a greater flow of fplendour.

Towards evening I croffed Broad river at a good ford, juft above its confluence with the Savanna, and arrived at Fort James, which is a four fquare flockade, with faliant baftions at each angle, mounted with a block-houfe, where are fome fwivel guns, one flory higher than the curtains, which are pierced with loop-holes, breaft high, and defended by fmall arms. The fortification enclofes about an acre of ground, where is the governor's or commandant's houfe, a good building, which is flanked on each fide by buildings for the officers and barracks Y for the garrifon, confifting of fifty ranges, including officers, each having a good horfe well equipt, a rifle, two dragoon piftols, and a hanger, befides a powder horn, thot pouch and tomahawk. The fort stands on an eminence in the forks between the Savanna and Broad rivers, about one mile above Fort Charlotta, which is fituated near the banks of the Savanna, on the Carolina fide. Fort lames is fituated nearly at an equal diffance from the banks of the two rivers, and from the extreme point of the land that feparates them. The point or peninfula between the two rivers, for the diffance of two miles back from the fort, is laid out for a town, by the name of Dartmouth, in honour to the earl of Dartmouth, who, by his interest and influence in the British councils, obtained from the king a grant and powers in favour of the Indian trading company of Georgia, to treat with the Creeks for the ceffion of a quantity of land fufficient to difcharge their debts to the traders, for the fecurity and defence of which territory this fortrefs was established.

This territory, called the New Purchafe, contains about two millions of acres, lying upon the head of great Ogechee, between the banks of the Savanna and Alatamaha, touching on the Occone, and taking within its precincts all the waters of Broad and Little rivers; comprehending a body of excellent and fertile land, well watered by innumerable rivers, creeks and brooks.

I made a little excursion up the Savanna river, four or five miles above the fort, with the furgeon of the garrifon, who was fo polite as to attend me to fhow me fome remarkable Indian monuments, which are worthy of every traveller's notice. These wonderful labours of the ancients fland in a level plain.

322 .

plain, very near the bank of the river, now twenty or thirty yards from it. They confift of conical mounts of earth and four square terraces, &c. The great mount is in the form of a cone, about forty or fifty feet high, and the circumference of its bafe two or three hundred yards, entirely composed of the loamy rich earth of the low grounds : the top or apex is flat :, a fpiral path or track leading from the ground up to the top is still visible, where now grows a large, beautiful spreading Red Cedar (Juniperus Americana): there appear four niches, excavated out of the fides of this hill, at different heights from the bafe, fronting the four cardinal points ; these nitches or centry boxes are entered into from the winding path, and feem to have been meant for refting places or look-outs. The circumjacent level grounds are cleared and planted with Indian Corn at prefent; and I think the proprietor of these lands, who accompanied us to this place, faid that the mount itself yielded above one hundred bushels in one feafon: the land hereabouts is indeed exceeding fertile and productive.

It is altogether unknown to us, what could have induced the Indians to raife fuch a heap of earth in this place, the ground for a great fpace around being fubject to inundations, at leaft once a year, from which circumftance we may conclude they had no town or fettled habitations here. Some imagine thefe tumuli were conftructed for look-out towers. It is reafonable to fuppofe, however, that they were to ferve fome important purpofe in thofe days, as they were public works, and would have required the united labour and attention of a whole nation, circumftanced as they were, to have conftructed one of them almoft in an age. There are

feveral lefs ones round about the great one, with fome very large tetragon terraces on each fide, near one hundred yards in length, and their furface four, fix, eight and ten feet above the ground on which they fland.

We may however hazard a conjecture; that as there is generally a narrow fpace or ridge in thefe low lands, immediately bordering on the river's bank, which is eight or ten feet higher than the adjoining low grounds, that lie betwixt the ftream and the heights of the adjacent main land, which, when the river overflows its banks, are many feet under water, when, at the fame time, this ridge on the river bank is above water and dry, and at fuch inundations appears as an ifland in the river; thefe people might have had a town on this ridge, and this mount raifed for a retreat and refuge in cafe of inundations, which are unforefeen and furprize them, very fuddenly, fpring and autumn.

Having finished my collections and observations, which were extended to a confiderable diffance in the environs of Dartmouth; May 10th fat off again, proceeding for Keowe; rode fix or eight miles up the river above the fort; crofled over into Carolina and foon got into the high road; but had not proceeded far, when I was furprifed by a fudden very heavy flower of rain, attended with terrific thunder, but luckily found prefent shelter at a farm houfe, where I continued above an hour before its fury abated; when I proceeded again, and notwithstanding this detention and obstacles in confequence of the heavy rains in raifing the creeks, travelled thirty five miles, and arrived in the evening at Mr. Cameron's, deputy commiffary for Indian affairs for the Cherokee nation, to whom I was recommended

commended by letters from the honourable John Stewart, fuperintendant, refiding at Charlefton, mentioning my bufinefs in the Cherokee country.

The road this day had led me over an uneven country, its furface undulated by ridges or chains of hills, fometimes rough with rocks and ftones, yet generally productive of forefts, with a variety of vegetables of inferior growth, i. e. Quercus, various fpecies, Juglans hickory, varieties, Liriodendron, Fraxinus, Fagus fylvatica, Fagus caftanea, Fagus pumila, f. Chinkapin, Nyffa Sylvatica, Acer rubrum, Æfculus fylvatica, Magnolia acuminata, Magnolia tripetala, Andromeda arborea, Hopea tinctoria, Æfculus pavia, Viburnum, Azalea flammea and other fpecies; Hydrangea, Calycanthus, &c.

The feafon being uncommonly wet, almost daily fhowers of rain, frequently attended with tremendous thunder, rendered travelling difagreeable, toilfome and hazardous, through an uninhabited wildernefs, abounding with rivers and brooks. I was prevailed upon by Mr. Cameron to ftay at his houfe a few days, until the rains ceased and the rivers could be more eafily forded.

The angelica lucida or nondo grows here in abundance; its aromatic carminative root is in tafte much like that of the Ginfeng (Panax) though more of the tafte and fcent of Anife feed; it is in high effimation with the Indians as well as white inhabitants, and felds at a great price to the Southern Indians of Florida, who dwell near the fea coaft where this never grows fpontaneoufly. I obferved a charming fpecies of Malva, having panicles of large fplendid purple or deep blue flowers; and another fpecies of Malva, very fingular indeed, for it it is a climber; the leaves are broad, which, with the whole plant, are hoary; the flowers are very final, and of a greenifh white. Here grows alfo in abundance a beautiful fpecies of Delphinium; the flowers differ in no refpect from those of the comman branching Larkspur of the gardens; they are of a fine deep blue colour, and disposed in long sparfed spikes; the leaves are compound, almost linear, but the segments not fo fine cut as those of the garden Larkspur.

The weather now fettled and fair, I prepared to proceed for Fort Prince George Keowe, having obtained of the agreeable and liberal Mr. Cameron, ample teftimonials and letters of recommendation to the traders in the nation : this gentleman alfo very obligingly fent a young negro flave to affift and pilot me as far as Seneca.

May 15th I left Lough-abber, the feat of Mr. Cameron. In the course of this day's journey I croffed feveral rivers and brooks, all branches of the Savanna, now called Keowe, above its confluence with the Tugilo, the West main branch. The face of the country uneven, by means of ridges of hills and water courfes; the hills fomewhat rocky near their fummits and at the banks of rivers and creeks. but very fertile, as there is a good depth of a loofe dark and most vegetative mould, on a stratum of reddifh brown tenacious clay, and fometimes a deep ftratum of dufky brown marl. The vegetable productions observed during this day's progress, were generally the fame as already recited fince leaving Dartmouth. The flaming Azaleas abound, and illuminate the hill fides; and a new and fingularly beautiful fpecies of Æsculus pavia, fituated above them, towards the fummits of these low hills. This confpicuoufly

confpicuoully beautiful flowering thrub, grows to the height of five or fix feet; many divergent crooked ftems arife together from a root or fource, which dividing their branches wreath about every way, after a very irregular and free order; the exterior fubdivisions of these limbs terminate with a heavy cluster or thyrfis of rofe or pink coloured flowers, fpeckled or variegated with crimfon, larger, more expansive and regular in their formation than those of the Pavia; and thefe heavy fpikes of flowers, charged with the morning dews, bend the flender flexile stems to the ground : the compound leaves are of the configuration of those of the Pavia, but broader and their veins more prominent. The fhrubs growing about the tops of the more barren graffy hills, where large trees are few and fcattered, fhow themfelves to great advantage, and make a fine appearance.

There are abundance of Grape vines (Vitis vinifera) which ramble and fpread themfelves over the fhrubs and low trees in these fituations, and I was affured produced fruit affording an excellent juice: the grapes are of various colours when ripe, of the figure and about the fize of the European wine grapes. Arrived at Sinica in the evening, after travelling forty five miles through an uninhabited wildernefs.

The Cherokee town of Sinica is a very refpectable fettlement, fituated on the Eaft bank of the Keowe river, though the greateft number of Indian habitations are on the opposite fhore, where likewife ftands the council-houfe, in a level plain betwixt the river and the range of beautiful lofty hills, which rife magnificently, and feem to bend over the green plains and the river : but the chief's houfe, with

with those of the traders, and some Indian dwellings, are feated on the ascent of the heights on the oppofite shore. This situation in point of prospect far excels the other, as it overlooks the whole settlement, the extensive fruitful plains on the river above and below, and the plantations of the inhabitants, commanding a most comprehensive diversified view of the opposite elevations.

Sinica is a new town rebuilt fince the late Indian war, when the Cherokées were vanquifhed and compelled to fue for peace, by General Middleton, commander of the Carolinian auxilaries acting against them, when the lower and middle fettlements were broken up: the number of inhabitants are now estimated at about five hundred, and they are able to muster about one hundred warriors.

Next day I left Sinica alone, and after riding about fixteen miles, chiefly through high forefts of excellent land at a little diffance from the river, arrived in the evening at fort Prince George Keowe.

Keowe is a most charming fituation, and the adjacent heights are naturally to formed and disposed, as with little expence of military architecture to be rendered almost impregnable. It lies in a fertile vale, at this feason enamelled with the incarnate fragrant strawberries and blooming plants, through which the beautiful river meanders, fometimes gently flowing, but more frequently agitated, gliding fwiftly between the fruitful strawberry banks, environed at various distances by high hills and mountains, fome rising boldly almost upright upon the verge of the expansive lawn, fo as to overlook and stand thadow it, whils others more losty, superb, misty and blue, majestically mount far above.

The

The evening ftill and calm, all filent and peaceable, a vivifying gentle breeze continually wafted from the fragrant ftrawberry fields, and aromatic Calycanthean groves on the furrounding heights; and the wary moor fowl thundering in the diftant echoing hills: how the groves and hills ring with the fhrill perpetual voice of the whip-poor-will!

Abandoned as my fituation now was, yet thank heaven many objects met together at this time, and confpired to conciliate, and in some degree compole my mind, heretofore fomewhat dejected and unharmonized : all alone in a wild Indian country. a thousand miles from my native land, and a vast diftance from any fettlements of white people. It is true, here were fome of my own colour, yet they were ftrangers; and though friendly and hospitable. their manners and cuftoms of living fo different from what I had been accustomed to, administered but little to my confolation : fome hundred miles yet to travel; the favage vindictive inhabitants lately ill-treated by the frontier Virginians; blood being fpilt between them and the injury not yet wiped away by formal treaty: the Cherokees extremely jealous of white people travelling about their mountains, especially if they should be seen peeping in amongst the rocks, or digging up their earth.

The vale of Keowe is feven or eight miles in extent, that is, from the little town of Kulfage \* about a mile above, thence down the river fix or feven miles, where a high ridge of hills on each fide of the river almost terminates the vale, but opens again below the narrow ridge, and continues ten or twelve

\* Sugar Town.

miles

miles down to Sinica, and in width one and two miles. This fertile vale within the remembrance of fome old traders with whom I converfed, was one continued fettlement; the fwelling fides of the adjoining hills were then covered with habitations, and the rich level grounds beneath lying on the river, was cultivated and planted, which now exhibit a very different fpectacle, humiliating indeed to the prefent generation, the pofterity and feeble remains of the once potent and renowned Cherokees: the veftiges of the ancient Indian dwellings are yet vifible on the feet of the hills bordering and fronting on the vale, fuch as pofts or pillars of their habitations, &c.

There are feveral Indian mounts or tumuli, and terraces, monuments of the ancients, at the old fite of Keowe, near the fort Prince George, but no Indian habitations at prefent; and here are feveral dwellings inhabited by white people concerned in the Indian trade: Mr. D. Homes is the principal trader here.

The old fort Prince George now bears no marks of a fortrefs, but ferves for a trading houfe.

CHAP.

## 330

#### NORTH AMERICA.

## CHAP. III.

I waited two or three days at this post expecting the return of an Indian who was out hunting. This man was recommended to me as a fuitable perfon for a protector and guide to the Indian fettlements over the hills; but upon information that he would not be in fhortly, and there being no other perfon fuitable for the purpose, rather than be detained, and perhaps thereby frustrated in my purposes, I determined to fet off alone and run all risks.

I croffed the river at a good ford just below the The river here is near one hundred yards old fort. over. After an agreeable progrefs for about two miles over delightful strawberry plains, and gently fwelling green hills, I began to afcend more fteep and rocky ridges. Having gained a very confiderable elevation, looking around, I enjoyed a very comprehensive and delightful view: Keowe which I had but just lost fight of, appeared again, and the ferpentine river fpeeding through the lucid green plain apparently just under my feet. After observing this delightful landscape, I continued on again three or four miles, keeping the trading path, which led me over uneven rocky land, croffing rivulets and brooks, and rapidly defcending over rocky precipices; when I came into a charming vale, embellished with a delightful glittering river, which meandered through it, and croffed my road. On my left hand, upon the graffy bafes of the rifing hills. appeared the remains of a town of the ancients, as the the tumuli, terraces, posts or pillars, old Peach and Plumb or chards, &c. fufficiently testify. These vales and fwelling bases of the furrounding hills, afford vast crops of excellent grass and herbage fit for pasturage and hay; of the latter, Plantago Virginica, Sanguisorba, Geum, Fragaria, &c. The Panax quinquesolium, or Ginseng, now appears plentifully on the North exposure of the bill, growing out of the rich mellow humid earth amongst the stones or fragments of rocks.

Having croffed the vales, I began to afcend again the more lofty ridges of hills; then continued about eight miles over more gentle pyramidal hills, narrow vales and lawns, the foil exceedingly fertile, producing lofty forefts and odoriferous groves of Calycanthus, near the banks of rivers, with Halefia, Philadelphus inodorus, Rhododendron ferrugineum, Azalea, Stewartia montana \*, fol. ovatis acuminatis ferratis, flor. niveo, ftaminum corona fulgida, pericarp. pomum exfuccum, apice acuminato dehifcens, Cornus Florida, Styrax, all in full bloom, and decorated with the following fweet roving climbers, Bignonia fempervirens, Big. crucigera, Lonicera fempervirens, Rofa paniculata, &c.

Now at once the mount divide; and difclofe to view the ample Occonne vale, encircled by a wreath of uniform hills; their fwelling bafes clad in cheerful verdure, over which, iffuing from between the mountains, plays along a glittering river, meandering through the meadows. Croffing thefe at the upper end of the vale, I began to afcend the Occonne mountain. On the foot of the hills are

\* This is a new species of Stewartia, unknown to the European botarifls, and not mentioned in any catalogues.

ruins

332

ruins of the ancient Occonne town. The first step after leaving the verdant beds of the hills, was a very high rocky chain of pointed hills, extremely well timbered with the following trees: Quercus tinctoria, Querc. alba, Querc. rubra, Fraxinus ex-celfior, Juglans hickory, various species, Ulmus, Tilia, Acer saccharinum, Morus, Juglans nigra, Juglans alba, Annona glabra, Robinia pfeudacacia, Magnolia acuminata, Æfculus fylvatica, with many more, particularly a fpecies of Robinia new to me, though perhaps the fame as figured and flightly defcribed by Catefby in his Nat. Hift. Carol. This beautiful flowering tree grows twenty and thirty feet high, with a crooked leaning trunk; the branches fpread greatly, and wreath about, fome almost touching the ground; however there appears a fingular pleafing wildness and freedom in its manner of growth; the flender fubdivisions of the branches terminate with heavy compound panicles of rofe or pink coloured flowers, amidit a wreath of beautiful pinnated leaves.

My next flight was up a very high peak, to the top of the Occonne mountain, where I refted; and turning about, found that I was now in a very elevated fituation, from whence I enjoyed a view inexpressibly magnificent and comprehensive. The mountainous wilderness which I had lately traversed, down to the region of Augusta, appearing regularly undulated as the great ocean after a tempest; the undulations gradually depressing, yet perfectly regular, as the squama of fish, or imbrications of tile on a roof: the nearest ground to me of a perfect full green; next more glaucous; and lastly almost blue as the ether with which the most

most distant curve of the horizon seemed to be blended.

My imagination thus wholly engaged in the contemplation of this magnificent landscape, infinitely varied, and without bound, I was almost infensible or regardless of the charming objects more within my reach: a new species of Rhododendron foremost in the affembly of mountain beauties; next the flaming Azalea, Kalmia latifolia, incarnate Robinia, fnowy mantled Philadelphus inodorus, perfumed Calycanthus, &c.

This fpecies of Rhododendron grows fix or feven feet high; many nearly erect ftems arife together from the root, forming a group or coppice. The leaves are three or four inches in length, of an oblong figure, broadeft toward the extremity, and terminating with an obtufe point; their upper furface of a deep green and polifhed; but the nether furface of a rufty iron colour, which feems to be effected by innumerable minute reddifh veficles, beneath a fine fhort downy pubefcence; the numerous flexile branches terminate with a loofe fpiked raceme, or clufter of large deep rofe coloured flowers, each flower being affixed in the diffufed clufter of a long peduncle, which, with the whole plant, poffefies an agreeable perfume.

After being recovered of the fatigue and labour in afcending the mountain, I began again to profecute my talk, proceeding through a fhady foreft; and foon after gained the most elevated creft of the Occonne mountain, and then began to defcend the other fide; the winding rough road carrying me over rocky hills and levels, fhaded by incomparable forefts, the foil exceedingly rich, and of an excellent

334

lent quality for the production of every vegetable fuited to the climate, and feeming peculiarly adapted for the cultivation of Vines (Vitis vinifera), Olives (Olea Europea), the Almond tree (Amygdalus communis), Fig (Ficus carica), and perhaps the Pomgranate, (Punica granatum), as well as Peaches (Amyg. Perfica), Prunus, Pyrus, of every variety. I passed again steep rocky ascents, and then rich levels, where grew many trees and plants common in Pennfylvania, New-York and even Canada, as Pinus strobus, Pin. sylvestris, Pin. abies. Acer faccharinum, Acer striatum, f. Pennfylvanicum, Populus tremula, Betula nigra, Juglans alba, &c.; but what feems remarkable, the yellow Jeffamine (Bignonia fempervirens), which is killed by a very flight froft in the open air in Pennfylvania, here, on the fummits of the Cherokee mountains affociates with the Canadian vegetables, and appears roving with them in perfect bloom and gaiety ; as likewife Halefia diptera, and Hal. tetraptera, mountain Stewartia, Styrax, Ptelea, Æsculus pavia; but all these bear our hardest frosts in Pennsylvania. Now I enter a charming narrow vale, through which flows a rapid large creek, on whofe banks are happily affociated the fhrubs already recited, together with the following; Staphylzea, Euonimus Americana, Hamamelis, Azalea, various fpecies, Aristolochia frutescens, f. odoratisfima, which rambles over the trees and fhrubs on the prolific banks of these mountain brooks.' Passed through magnificent high forests, and then came upon the borders of an ample meadow on the left, embroidered by the shade of a high circular amphitheatre of hills, the circular ridges rifing magnificently one over the other. On the green turfy bales of these afcents appear the ruins of a town of the ancients. The

The upper end of this fpacious green plain is divided by a promontory or fpur of the ridges before me, which projects into it: my road led me up into an opening of the afcents through which the glittering brook which watered the meadows ran rapidly down, dafhing and roaring over high rocky fteps. Continued yet afcending until I gained the top of an elevated rocky ridge, when appeared before me a gap or opening between other yet more lofty afcents, through which continued as the rough rocky road led me, clofe by the winding banks of a large rapid brook, which at length turning to the left, pouring down rocky precipices, glided off through dark groves and high forefts, conveying ftreams of fertility and pleafure to the fields below.

The furface of the land now for three or four miles is level, yet uneven, occafioned by natural mounds or rocky knobs, but covered with a good staple of rich earth, which affords forests of timber After this, gently defcending trees and fhrubs. again, I travelled fome miles over a varied fituation of ground, exhibiting views of grand forefts, dark detached groves, vales and meadows, as heretofore, and producing the like vegetable and other works of nature; the meadows affording exuberant pafturage for cattle, and the bafes of the encircling hills, flowering plants, and fruitful ftrawberry beds: obferved frequently ruins of the habitations or villages of the ancients. Croffed a delightful river, the main branch of Tugilo, when I began to afcend again, first over fwelling turfy ridges, varied with groves of stately forest trees; then ascending again more steep graffy hill fides, rested on the top of mount Magnolia, which appeared to me to be the highest ridge of the Cherokee mountains, which feparate

336

feparate the waters of Savanna river from those of the Tanafe or greater main branch of the Cherokee river. This running rapidly a North-West course through the mountains, is joined from the North-East by the Holftein; thence taking a West course yet amongst the mountains, receiving into it from either hand many large rivers, leaves the mountains immediately after being joined by a large river from the East, becomes a mighty river by the name of Hogehege, thence meanders many hundred miles through a vaft country confifting of forests, meadows, groves, expansive favannas, fields and fwelling hills, most fertile and delightful, flows into the beautiful Ohio, and in conjunction with its transparent waters, becomes tributary to the fovereign Miffiffippi.

This exalted peak I named mount Magnolia, from a new and beautiful fpecies of that celebrated family of flowering trees, which here, at the cafcades of Falling Creek, grows in a high degree of perfection: I had, indeed, noticed this curious tree feveral times before, particularly on the high ridges betwixt Sinica and Keowe, and on afcending the first mountain after leaving Keowe, when I obferved it in flower, but here it flouristies and commands our attention.

This tree \*, or perhaps rather fhrub, rifes eighteen to thirty feet in height; there are ufually many ftems from a root or fource, which lean a little, or flightly diverge from each other, in this refpect imitating the Magnolia tripetala; the crooked wreathing branches arifing and fubdividing from the main ftem without order or uniformity,

> \* Magnolia auriculata. Z

their

their extremities turn upwards, producing a very large rofaceous, perfectly white, double or polypetalous flower, which is of a most fragrant scent; this fine flower fits in the centre of a radius of very large leaves, which are of a fingular figure, fomewhat lanceolate, but broad towards their extremities, terminating with an acuminated point, and backwards they attenuate and become very narrow towards their bafes, terminating that way with two long, narrow ears or lappets, one on each fide of the infertion of the petiole; the leaves have only fhort footftalks, fitting very near each other, at the extremities of the floriferous branches, from whence they fpread themfelves after a regular order, like the fpokes of a wheel, their margins touching or lightly lapping upon each other, form an expansive umbrella fuperbly crowned or crefted with the fragrant flower, reprefenting a white plume; the bloffom is fucceeded by a very large crimfon cone or strobile, containing a great number of fcarlet berries, which, when ripe, fpring from their cells and are for a time fuspended by a white filky web or thread. The leaves of those trees which grow in a rich, light humid foil, when fully expanded and at maturity, are frequently above two feet in length and fix or eight inches where broadeft. discovered in the maritime parts of Georgia, particularly on the banks of the Alatamaha, another new species of Magnolia, whose leaves were nearly of the figure of those of this tree, but they were much lefs in fize, not more than fix or feven inches in length, and the ftrobile very fmall, oblong, fharp pointed and of a fine deep crimfon colour; but I never faw the flower. These trees grow straight and erect, thirty feet or more in height, and of a sharp conical form, much refembling the Cucumber tree (Mag. acuminata) in figure.

338

The day being remarkably warm and fultry, together with the labour and fatigue of afcending the mountains, made me very thirsty and in some degree funk my fpirits. Now past mid-day, fought a cool shaded retreat, where was water for tefreshment and grazing for my horse, my faithful flave and only companion. After proceeding a little farther, descending the other fide of the mountain, I perceived at fome diftance before me, on my right hand, a level plain fupporting a grand high forest and groves: the nearer I approached, my fteps were the more accelerated from the flattering prospect opening to view. I now entered upon the verge of the dark foreft, charming folitude! as I advanced through the animating fhades, obferved on the farther graffy verge a fhady grove : thither I directed my steps. On approaching these shades, between the stately columns of the fuperb forest trees, prefented to view, rushing from rocky precipices under the fhade of the penfile hills, the unparalleled cafcade of Falling Creek, rolling and leaping off the rocks: the waters uniting below, fpread a broad, glittering fheet over a vaft convex elevation of plain fmooth rocks, and are immediately received by a fpacious bafon, where trembling in the centre through hurry and agitation, they gently fubfide, encircling the painted ftill verge; from whence gliding fwiftly, they foon form a delightful little river, which continuing to flow more moderately, is reftrained for a moment, gently undulating in a little lake: they then pafs on rapidly to a high perpendicular steep of rocks, from whence these delightful waters are hurried down with irrefiftible rapidity. I here feated myfelf on the mofsclad rocks, under the shade of spreading trees and floriferous fragrant shrubs, in full view of the cafcades.

Z 2

At

At this rural retirement were affembled a charming circle of mountain vegetable beauties; Magnolia auriculata, Rhododendron ferrugineum, Kalmia latifolia, Robinia montana, Azalea flammula, Rofa paniculata, Calycanthus Floridus, Philadelphus inodorus, perfumed Convalaria majalis, Anemone thalictroides, Anemone hepatica, Erythronium maculatum, Leontice thalictroides Trillium feffile. Trillium cefnum, Cypripedium, Arethufa, Ophrys, Sanguinaria, Viola uvularia, Epigea, Mitchella repens, Stewartia, Halefia, Styrax, Lonicera, &c. Some of these roving beauties stroll over the moffy, fhelving, humid rocks, or from off the expanfive wavy boughs of trees, bending over the floods, falute their delufive fhade, playing on the furface; fome plunge their perfumed heads and bathe their flexile limbs in the filver ftream; whilft others by the mountain breezes are toffed about, their blooming tufts befpangled with pearly and crystaline dew-drops collected from the falling mifts, gliftening in the rainbow arch. Having collected fome valuable fpecimens at this friendly retreat, I continued my lonefome pilgrimage. My road for a confiderable time led me winding and turning about the fteep rocky hills; the defcent of fome of which were very rough and troublefome, by means of fragments of rocks, flippery clay and talc : but after this I entered a spacious forest, the land, having gradually acquired a more level furface: a pretty graffy vale appears on my right, through which my wandering path led me, close by the banks of a delightful creek, which fometimes falling over fteps of rocks, glides gently with ferpentine meanders through the meadows.

After croffing this delightful brook and mead, the land rifes again with fublime magnificence, and I am led over hills and vales, groves and high forefts, vocal with the melody of the feathered fongfters; the fnow-white cafcades glittering on the fides of the diftant hills.

It was now afternoon; I approached a charming vale, amidit fublimely high forefts, awful fhades! Darkness gathers around; far distant thunder rolls over the trembling hills: the black clouds with august majesty and power, move flowly forwards, fhading regions of towering hills, and threatening all the destruction of a thunder storm : all around is now still as death; not a whisper is heard, but a total inactivity and filence feem to pervade the earth; the birds afraid to utter a chirrup, in low tremulous voices take leave of each other, feeking covert and fafety: every infect is filenced, and nothing heard but the roaring of the approaching hurricane. The mighty cloud now expands its fable wings, extending from North to South, and is driven irrefiftibly on by the tumultuous winds, fpreading its livid wings around the gloomy concave, armed with terrors of thunder and fiery shafts of lightning. Now the lofty forefts bend low beneath its fury; their limbs and wavy boughs are toffed about and catch hold of each other; the mountains tremble and feem to reel about, and the ancient hills to be shaken to their foundations: the furious ftorm fweeps along, fmoaking through the vale and over the refounding hills : the face of the earth is obscured by the deluge descending from the firmament, and I am deafened by the din of the thunder. The tempestuous scene damps my fpirits, and my horfe finks under me at the tremendous peals, as I haften on for the plain.

The ftorm abating, I faw an Indian hunting cabin,

cabin, on the fide of a hill, a very agreeable profpect, efpecially in my prefent condition; I made up to it and took quiet poffeffion, there being no one to difpute it with me except a few bats and whip-poor-wills, who had repaired thither for fhelter from the violence of the hurricane.

Having turned out my horfe in the fweet meadows adjoining, and found fome dry wood under fhelter of the old cabin, I ftruck up a fire, dried my clothes, and comforted myfelf with a frugal repaft of bifcuit and dried beef, which was all the food my viaticum afforded me by this time, excepting a fmall piece of cheefe which I had furnished myfelf with at Charleston and kept till this time.

The night was clear, calm and cool, and I refted quietly. Next morning at day break I was awakened and fummoned to refume my daily tafk, by the fhrill cries of the focial night hawk and active merry mock-bird. By the time the rifing fun had gilded the tops of the towering hills, the mountains and vales rang with the harmonious fhouts of the pious and cheerful tenants of the groves and meads.

I obferved growing in great abundance in thefe mountain meadows, Sanguiforba Canadenfis and Heracleum maximum; the latter exhibiting a fine fhow, being rendered confpicuous even at a great diftance, by its great height and fpread, vaft pennatifid leaves and expansive umbels of fnow-white flowers. The fwelling bases of the furrounding hills fronting the meadows prefented for my acceptance the fragrant red ftrawberry, in painted beds of many acres furface, indeed I may fafely fay, many hundreds.

After

After paffing through this meadow, the road led me over the bases of a ridge of hills, which as a bold promontory dividing the fields I had just paffed, form expansive green lawns. On these towering hills appeared the ruins of the ancient famous town of Sticoe. Here was a vaft Indian mount or tumulus and great terrace, on which flood the council-houfe, with banks encompassing their circus; here were alfo old Peach and Plumb orchards; fome of the trees appeared yet thriving and fruitful. Prefently after leaving these ruins, the vale and fields are divided by means of a fpur of the mountains pushing forward ; here likewife the road forked; the left-hand path continued up the mountains to the Overhill towns: I followed the vale to the right hand, and foon began again to afcend the hills, riding feveral miles over very rough, ftony land, yielding the like vegetable productions as heretofore; and defcending again gradually, by a dubious winding path, leading into a narrow vale and lawn, through which rolled on before me a delightful brook, water of the Tanafe. I croffed it and continued a mile or two down the meadows; when the high mountains on each fide fuddenly receding, discovered the opening of the extensive and fruitful vale of Cowe, through which meanders the head branch of the Tanafe, almost from its fource, fixty miles, following its courfe down to Cowe.

I left for a little while, the ftream paffing fwiftly and foaming over its rocky bed, lafhing the fteep craggy banks, and then fuddenly funk from my fight, murmuring hollow and deep under the rocky furface of the ground. On my right hand the vale expands, receiving a pretty filvery brook of water which which came haftily down from the adjacent hills, and entered the river a little diftance before me: -I now turn from the heights on my left, the road leading into the level lawns, to avoid the hollow rocky grounds, full of holes and cavities, arching over the river, through which the waters are feen gliding along; but the river is foon liberated from thefe folitary and gloomy receffes, and appears waving through the green plain before me. I continued feveral miles, purfuing my ferpentine path, through and over the meadows and green fields, and croffing the river, which is here incredibly increafed in fize, by the continual accession of brooks flowing in from the hills on each fide, dividing their green turfy beds, forming them into parterres, viftas and verdant fwelling knolls, profufely productive of flowers and fragrant ftrawberries, their rich juice dying my horfes feet and ancles.

Thefe fwelling hills the prolific beds on which the towering mountains repofe, feem to have been the common fituations of the towns of the ancients, as appears from the remaining ruins of them yet to be feen, and the level rich vale and meadows in front, their planting grounds.

Continue yet ten or twelve miles down the vale, my road leading at times clofe to the banks of the river, the Azalea, Kalmia, Rhododendron, Philadelphus, &c. beautifying his now elevated fhores, and painting the coves with a rich and cheerful fcenery, continually unfolding new prospects as I traverfe the fhores: the towering mountains feem continually in motion as I pafs along, pompously raifing their fuperb crefts towards the lofty fkies, traverfing the far diftant horizon, The

344

The Tanafe is now greatly increafed from the conflux of the multitude of rivulets and brooks, defcending from the hills on either fide, generoufly contributing to establish his future fame, already a spacious river.

The mountains recede, the vale expands; two beautiful rivulets ftream down through lateral vales. gliding in ferpentine mazes over the green turfy knolls, and enter the Tanafe nearly oppofite to each other. Straight forward the expansive green vale feems yet infinite: now on the right hand a lofty pyramidal hill terminates a fpur of the adjacent mountain, and advances almost into the river; but immediately after doubling this promontory, an expanded wing of the vale fpreads on my right, down which came precipitately a very beautiful creek, which flowed into the river just before me: but now behold, high upon the fide of a diftant mountain overlooking the vale, the fountain of this brifk-flowing creek; the unparalleled waterfall appears as a vaft edifice with crystal front, or a field of ice lying on the bofom of the hill.

I now approach the river at the fording place, which was greatly fwollen by the floods of rain that fell the day before, and ran with foaming rapidity; but obferving that it had fallen feveral feet perpendicular, and perceiving the bottom or bed of the river to be level, and covered evenly with pebbles, I ventured to crofs over; however I was obliged to fwim two or three yards at the deepeft chanhel of it, and landed fafely on the banks of a fine meadow, which lay on the oppofite flore, where I immediately alighted and fpread abroad on the turf my linen, books and fpecimens of plants, &c. to dry, turned out my fteed to graze and then advanced into the the ftrawberry plains to regale on the fragrant, delicious fruit, welcomed by communities of the fplendid meleagris, the capricious roe-buck, and all the free and happy tribes which poffers and inhabit those prolific fields, who appeared to invite and joined with me in the participation of the bountiful repart prefented to us from the lap of nature.

I mounted again, and followed the trading path about a quarter of a mile through the fields, then gently alcended the green beds of the hills, and entered the forefts, being a point of a chain of hills projecting into the green vale or low lands of the rivers. This foreft continued about a mile, the furface of the land level but rough, being covered with ftones or fragments of rocks, and very large, fmooth pebbles of various fhapes and fizes, fome of ten or fifteen pounds weight : I obferved on each fide of the road many valt heaps of thefe ftones, Indian graves undoubtedly\*,

After I left the graves, the ample vale foon of, fered on my right hand, through the tall foreft trees, charming views, which exhibited a pleafing contraft, immediately out of the gloomy fhades and fcenes of death, into expansive, lucid, green, flowery fields, expanding between retiring hills, and turfy eminences, the rapid Tanafe gliding through, as a vaft ferpent rufhing after his prey.

My winding path now leads me again over the green fields into the meadows, fometimes vifiting

• At this place was fought a bloody and decifive battle between thefe Indians and the Carolinians, under the conduct of general Middleton, when a great number of Cherokee warriors were flain, which fhook their power, terrified and humbled them, infomuch that they deferted moft of their fettlements in the low countries, and betook themfelves to the mountains as lefs acceffible to the regular forces of the white people.

the

the decorated banks of the river, as it meanders through the meadows, or boldly fweeps along the bafes of the mountains, its furface receiving the images reflected from the flowery banks above.

Thus was my agreeable progrefs for about fifteen miles, fince I came upon the fources of the Tanafe, at the head of this charming vale: in the evening elpying a human habitation at the foot of the floping green hills, beneath lofty forefts of the mountains on the left hand, and at the fame time obferving a man croffing the river from the oppofite fhore in a canoe and coming towards me, I waited his approach, who hailing me, I anfwered I was for Cowe; he intreated me very civilly to call at his houfe, adding that he would prefently come to me.

I was received and entertained here until next day with the most perfect civility. After I had dined, towards evening, a company of Indian girls, inhabitants of a village in the hills at a fmall diftance, called, having baskets of strawberries; and this man who kept here a trading house, being inarried to a Cherokee woman of family, was indulged to keep a stock of cattle, and his helpmate being an excellent house-wife and a very agreeable good woman, treated us with cream and strawberries.

Next morning after breakfasting on excellent coffee, relished with bucanned venison, hot corn cakes, excellent butter and cheese, fat forwards again for Cowe, which was about fifteen miles distance, keeping the trading path which coursed through the low lands between the hills and the riyer, now spacious and well beaten by travellers, but but fomewhat intricate to a ftranger, from the frequent collateral roads falling into it from villages or towns over the hills. After riding about four miles, mostly through fields and plantations, the foil incredibly fertile, arrived at the town of Echoe, confifting of many good houfes, well inhabited. I paffed through, and continued three miles farther to Nucaffe, and three miles more brought me to Whatoga. Riding through this large town, the road carried me winding about through their little plantations of Corn, Beans, &c. up to the council-houfe, which was a very large dome or rotunda, fituated on the top of an ancient artificial mount, and here my road terminated. All before me and on every fide, appeared little plantations of young Corn, Beans, &c. divided from each other by narrow strips or borders of grafs, which marked the bounds of each one's property, their habitation standing in the midst. Finding no common high road to lead me through the town I was now at a ftand how to proceed farther; when observing an Indian man at the door of his habitation, three or four hundred yards diftance from me. beckoning me to come to him, I ventured to ride through their lots, being careful to do no injury to the young plants, the rifing hopes of their labour and industry; croffed a little graffy vale watered by a filver ftream, which gently undulated through; then afcended a green hill to the houfe, where I was chearfully welcomed at the door, and led in by the chief, giving the care of my horfe to two handfome youths, his fons. During my continuance here, about half an hour, I experienced the most perfect and agreeable hospitality conferred on me by these happy people; I mean happy in their difpolitions, in their apprehensions of rectitude with regard

regard to our focial or moral conduct. O divine fimplicity and truth, friendship without fallacy or guile, hospitality difinterested, native, undefiled, unmodified by artificial refinements !

My venerable hoft gracefully and with an air of refpect, led me into an airy, cool apartment; where being feated on cabins, his women brought in a refrefhing repart, confifting of fodden venifon, hot corn cakes, &c. with a pleafant cooling liquor made of hommony well boiled, mixed afterwards with milk; this is ferved up either before or after eating in a large bowl, with a very large fpoon or ladle to fup it with.

After partaking of this fimple but healthy and liberal collation, and the diffes cleared off, Tobacco and pipes were brought; and the chief filling one of them, whole stem, about four feet long, was sheathed in a beautiful speckled snake skin, and adorned with feathers and strings of wampum, lights it and fmoaks a few whiffs, puffing the fmoak first towards the fun, then to the four cardinal points, and lastly over my breast, hands it towards me, which I cheerfully received from him and fmoaked : when we fell into conversation. He first enquired if I came from Charleston? if I knew John Stewart, Efq. how long fince I left Charleston? &c. Having fatisfied him in my anfwers in the beft manner I could, he was greatly pleafed; which I was convinced of by his attention to me, his cheerful manners, and his ordering my horfe a plentiful bait of corn, which last instance of respect is conferred on those only to whom they manifest the highest esteem, faying that corn was given by the Great Spirit only for food to man.

I acquainted

I acquainted this ancient prince and patriarch with the nature and defign of my peregrinations, and that I was now for Cowe, but having loft my road in the town, requefted that I might be informed. He cheerfully replied, that he was pleafed I was come in their country, where I fhould meet with friendship and protection, and that he would himfelf lead me into the right path.

After ordering my horfe to the door, we went forth together, he on foot, and I leading my horfe by the bridle; thus walking together near two miles, we fhook hands and parted, he returning home, and I continuing my journey for Cowe.

This Prince is the chief of Whatoga, a man univerfally beloved, and particularly effecemed by the whites for his pacific and equitable difposition, and revered by all for his exemplary virtues, just, moderate, magnanimous and intrepid.

He was tall and perfectly formed; his countenance cheerful and lofty, and at the fame time truly characteriftic of the red men, that is, the brow ferocious, and the eye active, piercing or fiery, as an eagle. He appeared to be about fixty years of age, yet upright and mufcular, and his limbs active as youth.

After leaving my princely friend, I travelled about five miles through old plantations, now under grafs, but which appeared to have been planted the laft feafon; the foil exceeding fertile, loofe, black, deep and fat. I arrived at Cowe about noon. This fettlement is effeemed the capital town; it is fituated on the bafes of the hills on both fides of the river, near to its bank, and here terminates the great vale vale of Cowe, exhibiting one of the most charming natural mountaneous landscapes perhaps any where to be feen; ridges of hills rising grand and fublimely one above and beyond another, fome boldly and majestically advancing into the verdant plain, their feet bathed with the filver flood of the Tanafe, whilst others far distant, veiled in blue mists, fublimely mounting aloft, with yet greater majesty lift up their pompous crests, and overlock vast regions.

The vale is closed at Cowe by a ridge of mighty hills, called the Jore mountain, faid to be the highest land in the Cherokee country, which croffes the Tanase here.

On my arrival at this town I waited on the gentlemen to whom I was recommended by letter, and was received with respect and every demonstration of hospitality and friendship.

I took my refidence with Mr. Galahan the chief trader here, an ancient respectable man, who had been many years a trader in this country, and is efteemed and beloved by the Indians for his humanity, probity and equitable dealings with them; which, to be just and candid I am obliged to obferve (and blufh for my countrymen at the recital) is fomewhat of a prodigy; as it is a fact, I am afraid too true, that the white traders in their commerce with the Indians, get great and frequent .occafions of complaint of their difhonesty and violence: but yet there are few exceptions, as in the conduct of this gentleman, who furnishes a living instance of the truth of the old proverb, that "Honefty is the beft policy ;" for this old honeft Hibernian has often been protected by the Indians, when all

352

all others round about him have been ruined, their property feized and themfelves driven out of the country or flain by the injured, provoked natives.

Next day after my arrival I croffed the river in a canoe, on a vifit to a trader who refided amongst the habitations on the other shore.

After dinner, on his mentioning fome curious fcenes amongft the hills, fome miles diftance from the river, we agreed to fpend the afternoon in obfervations on the mountains.

After riding near two miles through Indian plantations of Corn, which was well cultivated, kept clean of weeds, and was well advanced, being near eighteen inches in height, and the Beans planted at the Corn-hills were above ground; we left the fields on our right, turning towards the mountains, and afcending through a delightful green vale or lawn, which conducted us in amongst the pyramidal hills, and croffing a brifk flowing creek, meandering through the meads, which continued near two miles, dividing and branching in amongst the We then mounted their freep afcents, rifing hills. gradually by ridges or fteps one above another, frequently croffing narrow fertile dales as we afcended: the air felt cool and animating, being charged with the fragrant breath of the mountain beauties, the blooming mountain clufter Rofe, blufhing Rhododendron and fair Lilly of the valley. Haying now attained the fummit of this very elevated ridge, we enjoyed a fine profpect indeed; the enchanting vale of Keowe, perhaps as celebrated for fertility, fruitfulnefs and beautiful profpects as the Fields of Pharfalia or the Vale of Tempe; the town, the elevated peeks of the Jore mountains, a

very

very diftant profpect of the Jore village in a beautiful lawn, lifted up many thoufand feet higher than our prefent fituation, befides a view of many other villages and fettlements on the fides of the mountains, at various diftances and elevations; the filver rivulets gliding by them, and fnow white cataracts glimmering on the fides of the lofty hills; the bold promontories of the Jore mountain ftepping into the Tanafe river, whilft his foaming waters rufhed between them.

After viewing this very entertaining fcene, we began to defcend the mountain on the other fide which exhibited the fame order of gradations of ridges and vales as on our afcent; and at length rested on a very expansive, fertile plain, amidst the towering hills, over which we rode a long time, through magnificent high forefts, extensive green fields, meadows and lawns. Here had formerly been a very flourishing fettlement; but the Indians deferted it in fearch of fresh planting land, which they foon found in a rich vale but a few miles diftance over a ridge of hills. Soon after entering on these charming, sequestered, prolific fields, we came to a fine little river, which croffing, and riding over fruitful strawberry beds and green lawns, on the fides of a circular ridge of hills in front of us, and going round the bases of this promontory, came to a fine meadow on an arm of the vale, through which meandered a brook, its humid vapours bedewing the fragrant strawberries which hung in heavy red clufters over the graffy yerge. We croffed the rivulet; then rifing a floping, green, turfy afcent, alighted on the borders of a grand forest of stately trees, which we penetrated on foot a little diftance to a horfe-ftamp, where was a large fquadron of those Aa uleful

ufeful creatures, belonging to my friend and companion, the trader, on the fight of whom they afiembled together from all quarters; fome at a diftance faluted him with fhrill neighings of gratitude, or came prancing up to lick the falt out of his hand, whilf the younger and more timorous came galloping onward, but coyly wheeled off, and fetching a circuit flood aloof; but as foon as their lord and mafter ftrewed the cryftaline falty bait on the hard beaten ground, they all, old and young, docile and timorous, foon formed themfelves in ranks and fell to licking up the delicious morfel.

It was a fine fight; more beautiful creatures I never faw; there were of them of all colours, fizes and difficients. Every year, as they become of age, he fends off a troop of them down to Charleston, where they are fold to the highest bidder.

Having paid our attention to this uleful part of the creation, who, if they are under our dominion, have confequently a right to our protection and favour, we returned to our trufty fervants that were regaling themfelves in the exuberant fweet pastures and strawberry fields in fight, and mounted again. Proceeding on our return to town, continued through part of this high forest skirting on the meadows : began to afcend the hills of a ridge which we were under the neceffity of croffing; and having gained its fummit, enjoyed a most enchanting view; a vast expanse of green meadows and strawberry fields; a meandering river gliding through, faluting in its various turnings the fwelling, green, turfy knolls, embellished with parterres of flowers and fruitful ftrawberry beds; flocks of turkies ftrolling. about them; herds of deer prancing in the meads or

or bounding over the hills; companies of young, innocent Cherokee virgins, fome bufy gathering the rich fragrant fruit, others having already filled their baskets, lay reclined under the shade of floriferous and fragrant native bowers of Magnolia, Azalea, Philadelphus, perfumed Calycanthus, fweet Yellow Jeffamine and cerulean Glycine frutescens, difclofing their beauties to the fluttering breeze, and bathing their limbs in the cool fleeting ftreams; whilft other parties more gay and libertine, were yet collecting ftrawberries, or wantonly chafing their companions, tantalifing them, ftaining their lips and cheeks with the rich fruit.

The fylvan scene of primitive innocence was enchanting, and perhaps too enticing for hearty young men long to continue idle fpectators.

In fine, nature prevailing over reafon, we wished at least to have a more active part in their delicious fports. Thus precipitately refolving, we cautioufly made our approaches, yet undifcovered, almost to the joyous scene of action. Now, although we meant no other than an innocent frolic with this gay affembly of hamadryades, we shall leave it to the perfon of feeling and fenfibility to form an idea to what lengths our paffions might have hurried us, thus warmed and excited, had it not been for the vigilance and care of fome envious matrons who lay in ambush, and espying us, gave the alarm, time enough for the nymphs to rally and affemble together. We however purfued and gained ground on a group of them, who had incautioufly ftrolled to a greater diftance from their guardians, and finding their retreat now like to be cut off, took shelter under cover of a little grove; but on perceiving themfelves to be difcovered by us, kept their ftation.

A 2 2

tion, peeping through the bufhes; when obferving our approaches, they confidently difcovered themfelves, and decently advanced to meet us, half unveiling their blooming faces, incarnated with the modeft maiden blufh, and with native innocence and cheerfulnefs, prefented their little bafkets, merrily telling us their fruit was ripe and found.

We accepted a bafket, fat down and regaled ourfelves on the delicious fruit, encircled by the whole affembly of the innocent jocofe fylvan nymphs: by this time the feveral parties, under the conduct of the elder matrons, had difpofed themfelves in companies on the green, turfy banks.

My young companion, the trader, by conceffions and fuitable apologies for the bold intrufion, having compromifed the matter with them, engaged them to bring their collections to his houfe at a ftipulated price : we parted friendly.

And now taking leave of these Elysian fields, we again mounted the hills, which we croffed, and traversing obliquely their flowery beds, arrived in town in the cool of the evening.

357

# CHAP. IV.

AFTER waiting two days at Cowe expecting a guide and protector to the Overhill towns, and at laft being diappointed, I refolved to purfue the journey alone, though against the advice of the traders; the Overhill Indians being in an ill humour with the whites, in confequence of fome late skirmishes between them and the frontier Virginians, most of the Overhill traders having left the nation.

Early in the morning I fat off attended by my worthy old friend Mr. Gallahan, who obligingly accompanied me near fifteen miles. We paffed through the Jore village, which is pleafingly fituated in a little vale on the fide of the mountain ; a pretty rivulet or creek winds about through the vale, just under the village : here I observed a little grove of the Cafine yapon, which was the only place where I had feen it grow in the Cherokee country; the Indians call it the beloved tree, and are very careful to keep it pruned and cultivated : they drink a yery ftrong infusion of the leaves, buds and tender branches of this plant, which is fo celebrated, indeed venerated by the Creeks and all the Southern maritime nations of Indians. We then continued travelling down the vale about two miles, the road deviating, turning and winding about the hills, and through groves in lawns, watered by brooks and rivulets, rapidly rushing from the towering hill on every

3.58

every fide, and flowing into the Jore, which is a confiderable branch of the Tanafe.

Began now to alcend the mountain, following a fmall arm or branch of the vale, which led to a gap or narrow defile, comprefied by the high pending hills on each fide, down which came rapidly a confiderable branch of the Jore, dashing and roaring over rocky precipices.

Now leaving Roaring creek on our right, and accomplifting two or three afcents or ridges, another branch of the trading path from the Overhills to Cowe came in on our right, and here my tranfitory companion Mr. Galahan parted from me, taking this road back to Cowe; when I was left again wandering alone in the dreary mountains, not indeed totally pathlefs, nor in my prefent fituation entirely agreeable, although fuch fcenes of primitive unmodified nature always pleafed me,

May we fuppofe that mankind feel in their hearts a predilection for the fociety of each other; or are we delighted with fcenes of human arts and cultivation, where the paffions are flattered and entertained with variety of objects for gratification?

I found myfelf unable, notwithftanding the attentive admonitions and perfuafive arguments of reafon, entirely to erafe from my mind, thofe imprefions which I had received from the fociety of the amiable and polite inhabitants of Charlefton; and I could not help comparing my prefent fituation in fome degree to Nebuchadnezzar's, when expelled from the fociety of men, and conftrained to roam in the mountains and wildernefs, there to herd and feed with the wild beafts of the forefts.

After

After parting with my late companion, I went forward with all the alacrity that prudence would admit of, that I might as foon as poffible fee the end of my toil and hazard, being determined at all events to crofs the Jore mountain, faid to be the higheft land in the Cherokee country.

After a gentle descent, I entered on an extremely ftony narrow vale, through which coafted fwiftly a large creek, twelve or fifteen yards wide, roaring over a rocky bed, which I croffed with difficulty and danger, the ford being incommoded by shelving rocks, full of holes and cliffs. After leaving this rocky creek, my path led me upon another narrow vale or glade, down which came in great hafte another noify brook, which I repeatedly croffed and recroffed, fometimes riding on narrow level graffy verges close to its banks; still ascending the vale gradually terminated, being thut up by ftupendous rocky hills on each fide, leaving a very narrow gap or defile, towards which my road led me, afcending the fteep fides of the mountains; when, after rifing feveral wearifome afcents, and finding myfelf over-heated and tired, I halted at a little graffy lawn through which meandered a fweet rivulet. Here I turned my horfe to graze, and fat down to reft on a green bank just beneath a high frowning promontory, or obtufe point of a ridge of the mountain yet above me, the friendly rivulet making a circuit by my feet; and now a little refted, I took out of my wallet fome bifcuit and cheefe, and a piece of neat's tongue, composing myself to eale and refreshment : when suddenly appeared within a few yards, advancing towards me from behind the point, a ftout likely young Indian fellow, armed with a rifle gun, and two dogs attending. Upon fight

fight of me he ftood, and feemed a little furprifed, as I was very much; but inftantly recollecting himfelf and affuming a countenance of benignity and cheerfulnefs, he came brifkly to me and fhook hands heartily, and fmilingly inquired from whence I came, and whither going; but fpeaking only in the Cherokee tongue, our converfation was not continued to a great length. I prefented him with fome choice Tobacco, which was accepted with courtefy and evident pleafure, and to my inquiries concerning the roads and diftance to the Overhill towns, he anfwered me with perfect cheerfulnefs and good temper. We then again fhook hands and parted in friendfhip; he defcended the hills, finging as he went,

Of vegetable productions obferved in this region, were the following, viz. Acer ftriatum, Ac. rubrum, Juglans nigra, Jug. alba, Jug. Hiccory, Magnolia acuminata, Quercus alba, Q. tinctoria, Q. rubra, Q. prinus, with the other varieties common in Virginia : Panax ginfeng, Angelica lucida, Convallaria majalis, Halefia, Stewartia, Styrax, Staphylea, Evonimus, Viburnum, Cornus Florida, Betula nigra, Morus, Tilia, Ulmus, Fraxinus, Hopea tinctoria, Annona, Bignonia sempervirens, Aristolochia frutefcens, Bignonia radicans, &c. Being now refreshed by a fimple but healthy meal, I began again to afcend the Jore mountains, which I at length accomplifhed, and refted on the most elevated peak; from whence I beheld with rapture and aftonifhment a fublimely awful fcene of power and magnificence, a world of mountains piled upon moun-Having contemplated this amazing profpect tains. of grandeur, I descended the pinnacles, and again falling into the trading path, continued gently defcending through a graffy plain, fcatteringly planted with

with large trees, and at a diftance furrounded with high forefts. I was on this elevated region fenfible of an alteration in the air, from warm to cold, and found that vegetation was here greatly behind, in plants of the fame kind of the country below; for inftance, when I left Charlefton, the yellow Jafmine was rather paft the blooming days, and here the buds were juft beginning to fwell, though fome were in bloom. Continued more than a mile through this elevated plain to the pitch of the mountain, from whence prefented to view an expansive prospect, exhibiting fcenes of mountainous landscape, weftward, vaft and varied, perhaps not to be exceeded any where:

My first descent and progress down the west fide of the mountain was remarkably gradual, eafy and pleafant, through graffy open forefts for the diftance of two or three miles; when my changeable path fuddenly turned round an obtufe point of a ridge, and defcended precipitately down a fteep rocky hill for a mile or more, which was very troublefome, being incommoded with fhattered fragments of the mountains, and in other places with boggy finks, occafioned by oozy fprings and rills stagnate finking in mercaceous earth ; fome of these steep foft rocky banks or precipices feem to be continually crumbling to earth; and in these mouldering cliffs I difcovered veins or strata of most pure and clear white. earth \*, having a faint bluifh or pearl colour gleam, fomewhat exhibiting the appearance of the little cliffs or wavy crefts of new fallen fnowdrifts : we likewife obferve in thefe diffolving rocky cliffs, veins of ifinglafs (Mica S. vitrum Mufcoviticum), fome

\* Mica nitida : fpecimens of this earth have been exported to England, for the purpole of making Porcelain or china ware.

of

of the flakes or laminæ incredibly large, entire and transparent, and would ferve the purpose of lights for windows very well, or for lanthorns; and here appeared strata of black lead (flibium).

At length, after much toil and exercife, I was a little relieved by a narrow graffy vale or lawn at the foot of this fteep defcent, through which courfed along a confiderable rapid brook, on whofe banks grew in great perfection the glorious Magnolia auriculata, together with the other confpicuous flowering and aromatic fhrubs already mentioned; and I obferved here in the rich bottoms near the creek, a new fpecies of Hydraftis, having very large finuated leaves and white flowers; after this I continued feveral miles over ridges and graffy vales watered with delightful rivulets.

Next day proceeding on eight or ten miles, generally through fpacious high forefts and flowery lawns; the foil prolific, being of an excellent quality for agriculture; came near the banks of a large creek or river, where this high foreft ended on my left hand, the trees became more fcattered and infcnfibly united with a graffy glade or lawn bordering on the river; on the opposite bank of which appeared a very extensive foreft, confifting entirely of the Hemlock fpruce (P. abies), almost encircled by diftant ridges of lofty hills,

Soon after croffing this large branch of the Tanafe, I obferved, defcending the heights at fome diftance, a company of Indians, all well mounted on herfe back; they came rapidly forward: on their nearer approach I obferved a chief at the head of the carravan, and apprehending him to be the Little Carpenter, emperor or grand chief of the Cherokees,

Cherokees, as they came up I turned off from the path to make way, in token of respect, which compliment was accepted, and gratefully and magnanimoufly returned; for his highness with a gracious and cheerful fmile came up to me, and clapping his hand on his breaft, offered it to me, faying, I am Ata-cul-culla; and heartily fhook hands with me, and asked me if I knew it. I answered, that the Good Spirit who goes before me fpoke to me, and faid, that is the great Ata-cul-culla; and added, that I was of the tribe of white men, of Pennfylvania, who efteem themfelves brothers and friends to the red men, but particularly fo to the Cherokees, and that notwithstanding we dwelt at fo great a diftance, we were united in love and friendship, and that the name of Ata-cul-culla was dear to his white brothers of Pennfylvania,

After this compliment, which feemed to be acceptable, he inquired if I came lately from Charlefton, and if John Stewart was well, faying that he was going to fee him. I replied, that I came lately from Charleston on a friendly visit to the Cherokees; that I had the honour of a perfonal acquaintance with the fuperintendant, the beloved man. whom, I faw well but the day before I fet off, and who, by letters to the principal white men in the nation, recommended me to the friendship and protection of the Cherokees. To which the great chief was pleafed to anfwer very refpectfully, that I was welcome in their country as a friend and brother; and then shaking hands heartily bid me farewel, and his retinue confirmed it by an united voice of affent. After giving my name to the chief, requefting my compliments to the fuperintendant, the emperor moved, continuing his journey for Charleston:

Charleston; and I, yet perfisting in my intention of visiting the Overhill towns, continued on. Leaving. the great foreft I mounted the high hills, defcending them again on the other fide, and fo on repeatedly for feveral miles, without obferving any variation in the natural productions fince paffing the Jore: and perceiving the flow progrefs of vegetation in this mountainous, high country; and, upon ferious confideration, it appearing very plainly that I could not, with entire fafety, range the Overhill fettlements until the treaty was over, which would not come on till late in June; I fuddenly came to a refolution to defer these refearches at this time, and leave them for the employment of another feafon and more favourable opportunity, and return to Dartmouth in Georgia, to be ready to join a company of adventurers who were to fet off in July for Mobile in West Florida. The leader of this company had been recommended to me as a fit perfon to affift me on fo-long and hazardous a journey, through the vaft territories of the Creeks.

Therefore next day I turned about on my return, proceeding moderately, being engaged in noting fuch objects as appeared to be of any moment, and collecting fpecimens; and in the evening of next day arrived again at Cowe,

Next morning Mr. Galahan conducted me to the chief of Cowe, who during my abfence had returned from the chace. The remainder of this day I fpent in obfervations in and about the town, reviewing my fpecimens, &c.

The town of Cowe confilts of about one hundred dwellings, near the banks of the Tanafe, on both fides of the river.

364

The

The Cherokees construct their habitations on a different plan from the Creeks; that is, but one oblong four fquare building, of one ftory high ; the materials confifting of logs or trunks of trees, ftripped of their bark, notched at their ends, fixed one upon another, and afterwards plaistered well, both infide and out, with clay well tempered with dry grafs, and the whole covered or roofed with the bark of the chefnut tree or long broad fhingles. This building is however partitioned transverfely, forming three apartments, which communicate with each other by infide doors ; each houfe or habitation has befides a little conical houfe covered with dirt, which is called the winter or hot-houfe ; this ftands a few yards diftance from the manfion-houfe, oppofite the front door.

The council or town-house is a large rotunda, capable of accommodating feveral hundred people : it stands on the top of an ancient artificial mount of earth, of about twenty feet perpendicular, and the rotunda on the top of it being above thirty feet more, gives the whole fabric an elevation of about fixty feet from the common furface of the ground. But it may be proper to observe, that this mount on which the rotunda stands, is of a much ancienter date than the building, and perhaps was railed for another purpofe. The Cherokees themfelves are as ignorant as we are, by what people or for what purpose these artificial hills were railed ; they have various stories concerning them, the best of which amount to no more than mere conjecture, and leave us entirely in the dark; but they have a tradition common with the other nations of Indians, that they found them in much the fame condition as they now appear, when their forefathers arrived from

from the Weft and poffeffed themfelves of the country, after vanquifting the nations of red men who then inhabited it, who themfelves found thefe mounts when they took poffeffion of the country, the former poffeffors delivering the fame ftory concerning them : perhaps they were defigned and appropriated by the people who conftructed them, to fome religious purpofe, as great altars and temples fimilar to the high places and facred groves anciently amongft the Canaanites and other nations of Paleftine and Judea.

The rotunda is constructed after the following manner: they first fix in the ground a circular range of posts or trunks of trees, about fix feet high, at equal diffances, which are notched at top, to receive into them from one to another, a range of beams or wall plates; within this is another circular order of very large and ftrong pillars, above twelve feet high, notched in like manner at top, to receive another range of wall plates; and within this is yet another or third range of stronger and higher pillars, but fewer in number, and standing at a greater diffance from each other; and laftly, in the centre flands a very ftrong pillar, which forms the pinnacle of the building, and to which the rafters centre at top; these rafters are strengthened and bound together by crofs beams and laths, which fuftain the roof or covering, which is a layer of bark neatly placed, and tight enough to exclude the rain, and fometimes they caft a thin fuperficies of earth over all. There is but one large door, which ferves at the fame time to admit light from without and the fmoak to escape when a fire is kindled; but as there is but a fmall fire kept, fufficient to give light at night, and that fed with dry fmall

fmall found wood divefted of its bark, there is but little fmoak. All around the infide of the building, betwixt the fecond range of pillars and the wall, is a range of cabins or fophas, confifting of two or three fteps, one above or behind the other, in theatrical order, where the affembly fit or lean down; thefe fophas are covered with mats or carpets, very curioufly made of thin fplints of Afh or Oak, woven or platted together; near the great pillar in the centre the fire is kindled for light, near which the muficians feat themfelves, and round about this the performers exhibit their dances and other fhows at public feftivals, which happen almost every night throughout the year.

About the clofe of the evening I accompanied Mr-Galahan and other white traders to the rotunda, where was a grand feftival, mufic and dancing. This affembly was held principally to rehearfe the ball-play dance, this town being challenged to play againft another the next day.

The people being affembled and feated in order, and the muficians having taken their flation, the ball opens, first with a long harangue or oration, fpoken by an aged chief, in commendation of the manly exercise of the ball-play, recounting the many and brilliant victories which the town of Cowe had gained over the other towns in the nation, not forgetting or neglecting to recite his own exploits, together with those of other aged men now prefent, coadjutors in the performance of these athletic games in their youthful days.

This oration was delivered with great fpirit and cloquence, and was meant to influence the paffons

of the young men prefent, excite them to emulation, and infpire them with ambition.

This prologue being at an end, the muficians began, both vocal and inftrumental; when prefently a company of girls, hand in hand, dreffed in clean white robes and ornamented with beads, bracelets and a profusion of gay ribbands, entering the door, immediately began to fing their refponfes in a gentle, low, and fweet voice, and formed themfelves in a femicircular file or line, in two ranks, back to back, facing the spectators and musicians, moving flowly round and round. This continued about a quarter of an hour, when we were furprifed by a fudden very loud and fhrill whoop, uttered at once by a company of young fellows, who came in brickly after one another, with rackets or hurls in one hand. These champions likewise were well dreffed, painted and ornamented with filver bracelets, gorgets and wampum, neatly ornamented with moccafins and high waving plumes in their diadems: they immediately formed themfelves in a femicircular rank, alfo in front of the girls, when these changed their order, and formed a fingle rank parallel to the men, raifing their voices in refponses to the tunes of the young champions, the femicircles continually moving round. There was fomething fingular and diverting in their ftep and motions, and I imagine not to be learned to exactness but with great attention and perfeverance. The step, if it can be fo termed, was performed after the following manner; first, the motion began at one end of the femicircle, gently rifing up and down upon their toes and heels alternately, when the first was up on tip-toe, the next began to raife the heel, and by the time the first rested again on the heel, the second was

368

on

on tip toe, thus from one end of the rank to the other, fo that fome were always up and fome down, alternately and regularly, without the leaft baulk or confusion; and they at the fame time, and in the fame motion, moved on obliquely or fideways, fo that the circle performed a double or complex motion in its progression, and at stated times exhibited a grand or universal movement, instantly and unexpectedly to the spectators, by each rank turning to right and left, taking each other's places : the movements were managed with inconceivable alertness and address, and accompanied with an instantaneous and universal elevation of the voice, and fhrill short whoop.

The Cherokees, befides the ball play dance, have a variety of others equally entertaining. The men efpecially exercise themselves with a variety of gefticulations and capers, fome of which are ludicrous and diverting enough; and they have others which are of the martial order, and others of the chace; thefe feem to be fomewhat of a tragical nature; wherein they exhibit aftonishing feats of military prowefs, masculine strength and activity. Indeed all their dances and mufical entertainments feem to be theatrical exhibitions or plays, varied with comic and fometimes lafcivious interludes: the women however conduct themfelves with a very becoming grace and decency, infomuch that in amorous interludes, when their responses and gestures seem confenting to natural liberties, they veil themfelves, just difcovering a glance of their sparkling eyes and blushing faces expressive of fensibility.

Next morning early I fet off on my return, and meeting with no material occurrences on the road, in two days arrived fafe at Keowe, where I tarried B b two or three days, employed in augmenting my collections of fpecimens, and waiting for Mr. Galahan, who was to call on me here, to accompany him to Sinica, where he and other traders were to meet Mr. Cameron, the deputy commiffary, to hold a congrefs at that town, with the chiefs of the Lower Cherokees, to confult preliminaries introductory to a general congrefs and treaty with thefe Indians, which was to be convened next June, and held in the Overhill towns.

I obferved in the environs of Keowe, on the bafes of the rocky hills, immediately afcending from the low grounds near the river bank, a great number of very fingular antiquities, the work of the ancients; they feem to me to have been altars for facrifice or fepulchres: they were conftructed of four flat flones, two fet on an edge for the fides, one clofed one end, and a very large flat one lay horizontally at top, fo that the other end was open; this fabric was four or five feet in length, two feet high, and three in width. I inquired of the trader what they were, who could not tell me certainly, but fuppofed them to be ancient Indian ovens; the Indians can give no account of them: they are on the furface of the ground, and are of different dimenfions.

I accompanied the traders to Sinica, where we found the commiffary and the Indian chiefs convened in counfel: continued at Sinica fometime, employing myfelf in obfervations, and making collections of every thing worthy of notice: and finding the Indians to be yet unfettled in their determination, and not in a good humour, I abandoned the project of vifiting the regions beyond the Cherokee mountains for this feason: fet off for my return to Fort James, Dartmouth, lodged this night

in

in the forefts near the banks of a delightful large creek, a branch of Keowe river, and next day arrived fafe at Dartmouth.

CHAP.

## CHAP. V.

BEING returned from the Cherokee country to Dartmouth, I underftood that the company of adventurers for Weft Florida were very forward in their preparations, and would be ready to fet off in a few weeks, fo that I had but a little time allowed me to make provision and equip myfelf for the profecution of fo long and hazardous a journey.

Our place of rendezvous was at fort Charlotte, on the opposite fide of the river Savanna, and about a mile from fort James. I had a defire to make little botanical excursions towards the head of Broad river, in order to collect fome curiofities which I had observed thereabouts; which being accomplished.

June 22d fet out from fort Charlotte in company with Mr. Whitfield, who was chief of our caravan. We travelled about twenty miles, and lodged at the farm of Monf. St. Pierre, a French gentleman, who received and entertained us with great politenefs and hofpitality. The manfion-houfe is fituated on the top of a very high hill near the banks of the river Savanna, overlooking his very extensive and well cultivated plantations of Indian Corn (Zea) Rice, Wheat, Oats, Indigo, Convolvulus Batata, &c. thefe are rich low lands, lying very level betwixt thefe natural heights and the river; his gardens occupy the gentle defcent on one fide of the mount, and a very thriving vineyard confifting of about five acres is on the other fide.

Next

Next morning after breakfast we fet off again, continuing nine or ten miles farther down the river, when we stopped at a plantation, the property of one of our companions, where we were joined by the reft of the company. After dining here we prepared to depart; and the gentleman of the houfe taking an affectionate leave of his wife and children, we fat off again, and proceeding fix miles farther down the river, we croffed over into Georgia, taking a road which led us into the great trading path from Augusta to the Creek nation. As the foil, fituation and productions of these parts, for feveral day's journey, differ very little from the Northern districts of Georgia, already recited, when on the furvey of the New Purchafe, I apprehend it needlefs to enter again into a detail of particulars, fince it would produce but little more than a recapitulation of that journey.

Early in the evening of the 27th we arrived at the Flat-rock, where we lodged. This is a common rendezvous or camping place for traders and Indians. It is an expansive clean flat or horizontal rock, but a little above the furface of the ground, and near the banks of a delightful rivulet of excellent water, which is one of the head branches of Great Ogeche: in the loofe rich foil verging round this rock, grew feveral very curious herbaceous plants, particularly one of fingular elegance and beauty, which I take to be a species of Ipomea (Ipomea, caule erecto, ramofo, tripedali, fol. radicalibus, pinnatifidis,' linearibus, humi-stratis, florib. incarnatis intus maculis coccineis adsperso.) It grows erect, three feet high, with a ftrong ftem, which is deco-rated with plumed or pinnatifid linear leaves, fomewhat refembling those of the Delphinium or Ipomea

Ipomea quamoclit; from about one half its length upwards, it fends out on all fides, afcendant branches which divide again and again; thefe terminate with large tubular or funnel-formed flowers; their limbs equally divided into five fegments; thefe beautiful flowers are of a perfect rofe colour, elegantly befprinkled on the infide of their petals with crimfon fpecks; the flowers are in great abundance, and together with the branches and delicately fine cut leaves, compofe a conical fpike or compound pannicle. I faw a fpecies of this plant, if not the very fame, growing on the fea coaft iflands near St. Auguftine. The blue flowered Malva and Delphinium were its aflociates about the Flat-rock.

There are extensive cane breaks or cane meadows fpread abroad round about, which afford the most acceptable and nourifhing food for cattle.

This evening two companies of Indian traders from Augusta arrived and encamped near us; and as they were bound to the Nation, we concluded to unite in company with them, they generously offering us their affiltance, having many spare horses and others lightly loaded, feveral of ours by this time being jaded: this was a favourable opportunity of relief in case of necessity.

Next morning as foon as the horfes were packed and in readinefs, we decamped and fet forward together.

I thought it worthy of taking notice of a fingular method the traders make use of to reduce the wild young horses to their hard duty. When any one perfiss in refusing to receive his load, if threats, the discipline of the whip and other common abuse prove 376

prove infufficient, after being haltered, a packhorfe-man catches the tip end of one of his ears betwixt his teeth and pinches it, when inftantly the furious ftrong creature, trembling, ftands perfectly ftill until he is loaded.

Our caravan confifting of about twenty men and fixty horfes, we made a formidable appearance, having now little to apprehend from predatory bands or out-laws.

This day's journey was for the most part over high gravelly ridges, and on the most elevated hills, appeared emerging out of the earth, rocky cliffs of a dark reddifh brown colour; their composition feemed to be a coarfe, fandy, ferruginous concrete, but fo firmly cemented as to conftitute a perfect hard ftone or rock, and appeared to be excavated or worn into cavities and furrows by the violence of the dafhing billows and rapid currents of the ocean, which heretofore probably washed them; there were however ftrata or veins in these rocks, of a finer compofition and compact confistence, and feemed ponderous rich iron ore. A little depth below the fandy gravelly furface, lies a ftratum of very comract reddifh yellow clay and fragments of ochre, The trees and fbrubs common on these gravelly ridges are as follows, Diofpyros, Quercus rubra, Q. nigra, Q. tinctoria or great Black Oak, Q. alba, Q. lobata, post White Oak, Q. incana, foliis ovalibus integerrimis fubtus incanis, Pinus lutea, Pinus tæda, foliis geminatis et trinis, strobilo ovato brevi, cortice rimofo, Pinus paluftris, foliis trinis longiffimis, ftrobilo elongata, Cornus Florida, Andromeda arborea, Nyfla fylvatica, Juglans hiccory, Prunus padus, &c. Of herbaceæ, Solidago, Eupatorium,

torium, Sylphium, Rudbeckia, Gerardia, Afclepias, Agave Virginica, Eryngium, Thapfia, Euphorbia, Polymnia, &c.

In the courfe of this day's journey we croffed two confiderable rivulets, running fwiftly over rocky beds. There is fome very good land on the gradual defcents of the ridges and their bottoms bordering on creeks, and very extensive graffy favannas and cane meadows always in view on one hand, or the other. At evening we came to camp on the banks of a beautiful creek, a branch of Great Ogeche, called Rocky Comfort, where we found excellent accommodations, here being pleafant graffy open plains to fpread our beds upon, environed with extensive cane meadows, affording the best of food for our quadrupeds.

The next day's journey led us over a level diftrict; the land generally very fertile and of a good quality for agriculture, the vegetable furface being of a dark, loofe, rich mould, on a stratum of stiff reddifh b yown clay. Croffing feveral confiderable creeks, branches of the Ocone, North branch of the Alatama ha, at evening, July 1st, encamped on the banks of the Ocone, in a delightful grove of forest trees, co ufifting of Oak, Afh, Mulberry, Hiccory, Black Walnur, Elm, Saffafras, Gleditfia, &c. This flourishing grove was an appendage of the high forefts we h zd paffed through, and projected into an extensive, green, open, level plain, confisting of old Indian fields and plantations, being the rich low lands of the river, and firetching along its banks upwards to a very great diftance, charmingly diverfified and decorated with detached groves and clumps of va vious trees and fhrubs, and indented on its verge loy advancing and retreating promontories of the high land.

.377

Our encampment was fixed on the fite of the old Ocone town, which, about fixty years ago, was evacuated by the Indians, who, finding their fituation difagreeable from its vicinity to the white people, left it, moving upwards into the Nation or Upper Creeks, and there built a town; but that fituation not fuiting their roving disposition, they grew fickly and tired of it, and refolved to feek an habitation more agreeable to their minds. They all arofe, directing their migration South-Eastward towards the fea-coaft; and in the courfe of their journey, obferving the delightful appearance of the extenfive plains of Alachua and the fertile hills environing it, they fat down and built a town on the banks of a spacious and beautiful lake, at a small distance from the plains, naming this new town, Cufcowilla: this fituation pleafed them, the vaft defarts, forests, lake, and savannas around, affording unbounded range of the best hunting ground for bear and deer, their favourite game. But although this fituation was healthy and delightful to the utmost degree, affording them variety and plenty of every defirable thing in their effimation, yet troubles and afflictions found them out. This territory, to the promontory of Florida, was then claimed by the Tomocas, Utinas, Caloofas, Yamafes and other remnant tribes of the ancient Floridans and the more Northern refugees, driven away by the Carolinians, now in alliance and under the protection of the Spaniards, who affifting them, attacked the new fettlement and for many years were very troublefome; but the Alachuas or Ocones being ftrengthened by other emigrants and fugitive bands from the Upper Creeks, with whom they were confederated, and who gradually established other towns in this low country, ftretching a line of fettlements across the ifthmus, extending from the Alatamaha

Alatamaha to the bay of Apalache; these uniting were at length able to face their enemies and even attack them in their own fettlements; and in the end, with the affistance of the Upper Creeks, their uncles, vanquished their enemies and destroyed them, and then fell upon the Spanish fettlements, which also they entirely broke up. But having treated of these matters in the journal of my travels into East Florida, I end this digression and proceed again on my journey.

After croffing the Ocone by fording it, which is about two hundred and fifty yards over, we travelled about twenty miles, and came to camp in the evening; pafied over a pleafant territory, prefenting varying fcenes of gentle fwelling hills and levels, affording fublime forefts, contrasted by expanfive illumined green fields, native meadows and Cane brakes; the vegetables, trees, fhrubs and plants the fame as already noticed without any material variation. The next day's journey was about twenty miles, having croffed the Oakmulge by fording it three or four hundred yards over. This river is the main branch of the beautiful Alatamaha : on the East bank of the river lie the famous Oakmulge fields, where are yet confpicuous very wonderful remains of the power and grandeur of the ancients of this part of America, in the ruins of a capital town and fettlement, as vaft artificial hills, terraces, &c. already particularly mentioned in my tour through the lower districts of Georgia. The Oakmulge here is about forty miles diftance from the Ocone, the other arm of the Alatamaha. In the evening we came to camp near the banks of Stony Creek, a large rapid water about fix miles beyond the river.

379

Next

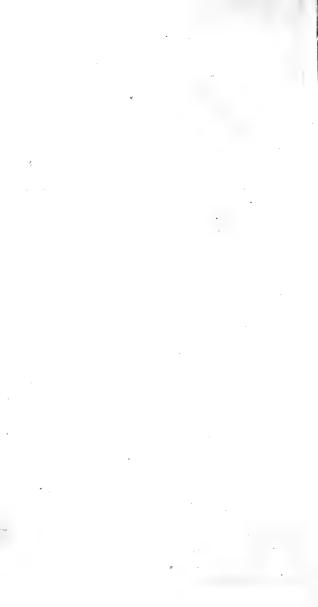

Next day we travelled about twenty miles farther, crofling two confiderable creeks named Great and Little Tobofochte; and at evening encamped clofe by a beautiful large brook called Sweet Water, the glittering waving flood paffing along actively over a bed of pebbles and gravel. The territory through which we paffed from the banks of the Oakmulge to this place, exhibited a delightful diverfified rural fcene, and promifes a happy, fruitful and falubrious region, when cultivated by induftrious inhabitants; generally ridges of low fwelling hills and plains fupporting grand forefts, vaft Cane meadows, favannas and verdant lawns.

I obferved here a very fingular and beautiful shrub, which I suppose is a species of Hydrangia (H. quercifolia). It grows in coppices or clumps near or on the banks of rivers and creeks; many ftems ufually arife from a root, fpreading itfelf greatly on all fides by fuckers or offsets; the ftems grow five or fix feet high, declining or diverging from each other, and are covered with feveral barks or rinds. the laft of which being of a cinereous dirt colour and very thin, at a certain age of the ftems or fhoots cracks through to the next bark, and is peeled of. by the winds, difcovering the under, fmooth, dark reddiff brown bark, which alfo cracks and peels of the next year, in like manner as the former; thu every year forming a new bark; the flems divid regularly or oppofitely, though the branches and crooked or wreathe about horizontally, and thefe again divide, forming others which terminate with large heavy panicles or thyrfi of flowers; bu these flowers are of two kinds: the numerous pay tial fpikes which compose the panicles and confi of a multitude of very fmall fruitful flowers, terminate

minate with one or more very large expansive neutral or mock flowers, ftanding on a long, flender, fiff peduncle; thefe flowers are compoled of four broad oval petals or fegments, of a dark role or crimfon colour at first, but as they become older acquire a deeper red or purplish hue, and lastly are of a brown or ferruginous colour; these have no perfect parts of generation of either fex, but difcover in their centre two, three or four papillæ or rudiments; these neutral flowers, with the whole pannicle, are truly permanent, remaining on the plant for years, until they dry and decay : the leaves which clothe the plants are very large, pinnatifid or palmated, and ferrated or toothed, very much refembling the leaves of fome of our Oaks; they fit opposite, supported by flender petioles, and are of a fine, full green colour.

Next day after noon we croffed Flint river by fording it, about two hundred and fifty yards over, and at evening came to camp near the banks of a large and deep creek, a branch of the Flint. The high land excellent, affording grand forefts, and the low ground vaft timber and Canes of great height and thicknefs, Arundo gigantea. I obferved growing on the steep dry banks of this creek, a' fpecies of fhrub Hypericum, of extraordinary fhow and beauty (Hypericum aureum). It grows erect, three or four feet high, forming a globular top reprefenting a perfect little tree; the leaves are large, oblong, firm of texture, fmooth and thining ; the flowers are very large, their petals broad and confpicuous, which, with their tufts of golden filaments, give the little bushes a very splendid appearance.

The adjacent low grounds and Cane fwamp afforded forded excellent food and range for our horfes, who, by this time, through fatigue of conftant travelling. heat of the climate and feafon, were tired and difpirited : we came to camp fooner than ufual, and ftarted later next day, that they might have time to reft and recruit themfelves. The territory lying upon this creek, and the fpace between it and the river, prefent every appearance of a delightful and fruitful region in fome future day, it being a rich foil, and exceedingly well fituated for every branch of agriculture and grazing, diversified with hills and dales, favannas and vaft Cane meadows, and watered by innumerable rivulets and brooks, all contiguous to the Flint river : an arm of the great Chata Uche or Apalachucla offers an uninterrupted navigation to the bay of Mexico and the Atlantic ocean, and thence to the West India islands and over the whole world.

Our horfes being hunted up and packed, fat forward again, proceeding moderately, afcending a higher country and more uneven by means of ridges of gentle hills; the country however very pleafing, being diverfified with expansive groves, favannas and Cane meadows, abounding with creeks and brooks gliding through the plains or roving about the hills, their banks bordered with forefts and groves, confisting of varieties of trees, fhrubs and plants; the fummits of the hills frequently prefenting to view piles and cliffs of the ferruginous rocks, the fame fpecies as observed on the ridges between the Flat-rock and Rocky Comfort.

Next day we travelled but a few miles; the heat and the burning flies tormenting our horfes to fuch a degree, as to excite compafion even in the hearts of pack-horfemen. Thefe biting flies are

of

of feveral fpecies, and their numbers incredible. We travelled almost from fun-rife to his fetting, amidft a flying hoft of these perfecuting spirits, who formed a vaft cloud around our caravan fo thick as to obfcure every diftant object; but our van always bore the brunt of the conflict; the head, neck, and fhoulders of the leading horfes were continually in a gore of blood : fome of thefe flies were near as large as humble bees; this is the hippobofca. They are armed with a ftrong fharp beak or probofcis, fhaped like a lancet, and fheathed in flexible thin valves; with this beak they inftantly pierce the veins of the creatures, making a large orifice from whence the blood fprings in large drops, rolling down as tears, causing a fierce pain or aching for a confiderable time after the wound is made. There are three or four fpecies of this genus of lefs fize but equally vexatious, as they are valily more numerous, active and fanguineous; particularly, one about half the fize of the first mentioned, the next. lefs, of a dufky colour with a green head; another yet fomewhat lefs, of a fplendid green and the head of a gold colour; the fling of this is intolerable, no lefs acute than a prick from a red-hot needle, or a fpark of fire on the fkin; thefe are called the burning flies. Befides the preceding tormentors, there are three or four species of the afilus or smaller biting flies; one of a gravifh dufky colour; another much of the fame colour, having fpotted wings and a green head; and another very fmall and perfectly black : this laft fpecies lies in ambufh in fhrubby thickets and Cane brakes near water: whenever we approach the cool fhades near creeks. impatient for repole and relief, almost finking under the perfecutions from the evil fpirits, who continually

tinually furround and follow us over the burning defart ridges and plains, and here are in fome hopes of momentary peace and quietnefs, under cover of the cool humid groves, we are furprized and quickly invefted with dark clouds of these perfecuting demons, besides mulquitoes and gnats (culex et cynips).

The next day being in like manner oppreffed and harraffed by the ftinging flies and heats: we halted at noon, being unable longer to fupport ourfelves under fuch grievances, even in our prefent fituation charming to the fenfes; on the acclivity of a high fwelling ridge planted with open airy groves of the fuperb terebinthine Pines, glittering rills playing beneath, and pellucid brooks meandering through an expansive green favanna, their banks ornamented with coppices of blooming aromatic fhrubs and plants perfuming the air. The meridian heats just allayed, the fun is veiled in a dark cloud, rifing North-Weftward; the air ftill, gloomv and fultry; the animal fpirits fink under the conflict, and we fall into a kind of mortal torpor rather than refreshing repose; and startled or terrified at each others plaintive murmurs and groans. Now the carth trembles under the peals of inceffant distant thunder, the hurricane comes on roaring, and I am shocked again to life : I raife my head and rub open my eyes, pained with gleams and flashes of lightning; when just attempting to wake my afflicted brethren and companions, almost overwhelmed with floods of rain, the dark cloud opens over my head, developing a vaft river of the etherial fire; I am instantly struck dumb, inactive and benumbed; at length the pulle of life begins to vibrate, the animal fpirits begin to exert their powers, and I am by degrees revived.

In

In the evening this furprifingly heavy tempeft paffed off, we had a ferené sky and a pleafant cool night; having had time enough to collect a great quantity of wood and Pine knots to feed our fires and keep up a light in our camp, which was a lucky precaution, as we found it abfolutely neceffary to dry our clothes and warm ourfelves, for all our fkins and bedding were caft over the packs of merchandize to prevent them and our provision from being injured by the deluge of rain. Next day was cool and pleafant, the air having recovered its elafticity and vivific fpirit; I found myfelf cheerful and invigorated; indeed all around us appeared reanimated, and nature prefented her cheerful countenance; the vegetables fmiled in their blooming decorations and fparkling crystalline dew-drops. The birds fung merrily in the groves, and the alert roe-buck whiftled and bounded over the ample meads and green turfy hills. After leaving our encampment, we travelled over a delightful territory, prefenting to view variable fylvan fcenes, confifting of chains of low hills affording high forefts, with expanfive favannas, Cane meadows, and lawns between, watered with rivulets and glittering brooks. Towards evening we came to camp on the banks of Pintchlucco, a large branch of the Chata Uche river.

The next day's journey was over an uneven hilly country, but the foil generally fertile and of a quality and fituation favourable to agriculture and grazing, the fummits of the ridges rough with ferruginous rocks, in high cliffs and fragments, fcattered over the furface of the ground : obferved alfo high cliffs of ftiff reddilh brown clay, with veins or ftrata of ferruginous ftones, either in detached maffes or conglomerated nodules or hematites with veins or mafles of ochre.

385

Next

Next day, after traverfing a very delightful territory, exhibiting a charming rural fcenery of primitive nature, gently defcending and paffing alternately eafy declivities or magnificent terraces fupporting fublime forefts, almost endlefs graffy fields, detached groves and green lawns for the diffance of nine or ten miles, we arrived at the banks of the Chata Uche river oppofite the Uche town; where, after unloading our horfes, the Indians came over to us in large canoes, by means of which, with the cheerful and liberal affiftance of the Indians, ferried over the merchandize, and afterwards driving our horfes altogether into the river fwam them over : the river here is about three or four hundred yards wide, carries fifteen or twenty feet water, and flows down with an active current; the water is clear, cool and falabrious.

The Uche town is fituated in a vaft plain, on the gradual afcent as we rife from a narrow ftrip. of low ground immediately bordering on the river; it is the largeft, most compact and best situated Indian town I ever faw; the habitations are large and neatly built; the walls of the houfes are conftructed of a wooden frame, then lathed and plaiftered infide and out with a reddifh well tempered clay or mortar, which gives them the appearance of red brick walls : and these houses are nearly covered or roofed with Cyprefs bark or fhingles of that tree. The town appeared to be populous and thriving, full of youth and young children : I fuppofe the number of inhabitants, men, women and children, might amount to one thousand or fifteen hundred, as it is faid they are able to multer five hundred gun-men or warriors. Their own national language is altogether or radically different from the

the Creek or Muscogulge tongue, and is called the Savanna or Savanuca tongue; I was told by the traders it was the fame with, or a dialect of, the Shawanefe. They are in confederacy with the Creeks, but do not mix with them; and, on account of their numbers and ftrength, are of importance enough to excite and draw upon them the jealoufy of the whole Muscogulge confederacy, and are usually at variance, yet are wife enough to unite against a common enemy, to fupport the interess and glory of the general Creek confederacy.

After a little refreshment at this beautiful town, we repacked and set off again for the Apalachucla town, where we arrived after riding over a level plain, confisting of ancient Indian plantations, a beautiful landscape diversified with groves and lawns.

This is efteemed the mother town or Capital of the Creek or Mufcogulge confederacy: facred to peace; no captives are put to death or human blood fpilt here. And when a general peace is propofed, deputies from all the towns in the confederacy affemble at this capital, in order to deliberate upon a fubject of fo high importance for the profperity of the commonwealth.

And on the contrary the great Cowetta town, about twelve miles higher up this river, is called the bloody town, where the Micos, chiefs, and warriors affemble when a general war is proposed; and here captives and state malefactors are put to death.

The time of my continuance here, which was about a week, was employed in excursions round about this fettlement. One day the chief trader of Apalachucla obliged me with his company on a C c a walk

walk of about a mile and an half down the river, to view the ruins and fite of the ancient Apalachucla : it had been fituated on a peninfula formed by a doubling of the river, and indeed appears to have been a very famous capital by the artificial mounds or terraces, and a very populous fettlement, from its extent and expansive old fields, ftretching beyond the fcope of the fight along the low grounds of the river. We viewed the mounds or terraces, on which formerly flood their town house or rotunda and fquare or areopagus, and a little behind thefe, on a level height or natural ftep, above the low grounds, is a vaft artificial terrace or four fquare mound, now feven or eight feet higher than the common furface of the ground; in front of one fquare or fide of this mound adjoins a very extenfive oblong fquare yard or artificial level plain, funk a little below the common furface, and furrounded with a bank or narrow terrace, formed with the earth thrown out of this yard at the time of its formation: the Creeks or prefent inhabitants have a tradition that this was the work of the ancients, many ages prior to their arrival and poffeffing this country.

This old town was evacuated about twenty years ago by the general confent of the inhabitants, on account of its unhealthy fituation, owing to the frequent inundations of the river over the low grounds; and moreover they grew timorous and dejected, apprehending themfelves to be haunted and poffeifed with vengeful fpirits, on account of human blood that had been undefervedly\* fpilt in this old town,

\* About fifty or fixty years ago almost all the white traders then in the nation were maffacted in this town, whither they had repaired from the different towns, in hopes of an afylum or refuge, in confequence of the alarm, having been timely apprifed 3<sup>c</sup> the hoftile intentions of the Indians by

town, having been repeatedly warned by apparitions and dreams to leave it.

At the time of their leaving this old town, like the ruin or difperfion of the ancient Babel, the inhabitants separated from each other, forming feveral bands under the conduct or aufpices of the chief of each family or tribe. The greatest number, however, chofe to fit down and build the prefent new Apalachucla town, upon a high bank of the river above the inundations. The other bands purfued different routs, as their inclinations led them, fettling villages lower down the river; fome continued their migration towards the fea coaft, feeking their kindred and countrymen amongst the Lower Creeks in East Florida, where they settled themselves. My intelligent friend, the trader of Apalachucla, having from a long refidence amongit these Indians acquired an extensive knowledge of their cultoms and affairs, I inquired of him what were his fentiments with refpect to their wandering, unfettled difpolition ; their fo frequently breaking up their old towns and fettling new ones, &c. His answers and opinions were the necessity they were under of having fresh or new strong land for their plantations, and new, convenient and extenfive range or hunting ground, which unavoidably forces them into contentions and wars with their confederates and neighbouring tribes; to avoid which they had rather move and feek a plentiful and peaceable retreat, even at a diftance, than contend with friends and relatives or embroil themfelves

by their temporary wives. They all met together in one heufe, under the avowed protection of the chiefs of the town, waiting the event; but whilft the chiefs were affembled in council, deliberating on ways and mears to protect them, the Indians in multitudes furrounded the houfe and fet fire to it: they all, to the number of eighteen or twenty, perifhed with the boute in the flames. The trader flowed me the ruins of the houfe where they were burnt.

in destructive wars with their neighbours, when either can be avoided with fo little inconvenience. With regard to the Muscogulges, the first object in order to obtain these conveniencies was the deftruction of the Yamafes, who held the pofferfion of Florida, and were in close alliance with the Spaniards, their declared and most inveterate enemy, which they at length fully accomplished; and by this conquest they gained a vaft and invaluable territory, comprehending a delightful region, and most plentiful country for their favourite game, bear and But not yet fatisfied, having already to far deer. conquered the powerful Cherokees, as, in a manner, to force them to alliance, and compelled the warlike Chicafaws to fue for peace and alliance with them; they then grew arrogant and infatiable, and turned their covetous looks towards the potent and intrepid Chactaws, the only Indian enemy they had to fear, meaning to break them up and poffefs themfelves of that extensive, fruitful and delightful country, and make it a part of their vast empire. But the Chactaws, a powerful, hardy, fubtile and intrepid race, effimated at twenty thousand warriors, are likely to afford fufficient exercise for the proud and reftless fpirits of the Muscogulges, at least for some years to come; and they appear to be fo equally matched with the Chactaws, that it feems doubtful which of these powerful nations will rife victorious. The Creeks have fworn, it feems, that they never will make peace with this enemy as long as the rivers flow or the fun purfues his courfe through the fkies.

Thus we fee that war or the exercise of arms originates from the fame motives, and operates in the spirits of the wild red men of America, as it formerly formerly did with the renowned Greeks and Romans, or modern civilized nations, and not from a ferocious, capricious defire of fhedding human blood as carnivorous favages: neither does the eager avarice of plunder flimulate them to acts of madnefs and cruelty, that being a trifling object in their effimation, a duffield blanket, a polifhed rifle gun, or embroidered mantle; no, their martial prowefs and objects of defire and ambition proceed from greater principles and more magnanimous intentions, even that of reuniting all nations and languages under one univerfal confederacy or common wealth.

The vegetable productions in the rich low ground, near the banks of this great river, of trees and fhrubs, are as follow; Platanus occidentalis, Liriodendron tulipifera, Populus heterophylla, Laurus fassafras, Laurus Barbonia, Laurus benzoin, Betula lenta, Salix fluvialis, Magnolia grandiflora, Annona glabra, Ulmus campestris, Ulmus suberifera, Carpinus, Quercus, various species, Juglans, various fpecies, Æsculus pavia, Æsculus sylvatica, s. Virginiana, Morus, Hopea tinctoria, Fagus sylvatica, of furprifing magnitude and comelinefs, &c. The land rifes from the river with fublime magnificence, gradually retreating by flights or fteps one behind and above the other, in beautiful theatrical order, each step or terrace holding up a level plain; and as we travel back from the river, the fteps are higher, and the corresponding levels are more and more expansive : the afcents produce grand high forefts, and the plains prefent to view a delightful varied landscape, confisting of extensive graffy fields, detached groves of high forest trees, and clumps of lower trees, evergreen fhrubs and herbage; green knolls, with ferpentine, wavy, glittering brooks courfing

courfing through the green plains; and dark promontories, or obtufe projections of the fide-long acclivities, alternately advancing or receding on the verge of the illumined native fields, to the utmost extent of fight. The fummits of the acclivities afford, befides the forest trees already recited, Halefia, Ptelea, Circis, Cornus Florida and Amorpha. The upper mound or terrace holds up a dilated level plain of excellent land, for the diftance of five or fix miles in width, which is a high foreft of the majeflic trees already mentioned, as Quercus tinctoria, Juglans nigra, Morus, Ulmus, Tilia, Gleditfia, Juglans hiccory, &c. The land after this diftance, though almost flat and level, becomes leaner; the vegetative mould or furface is fhallower, on a ftratum of tenaceous humid clay, for the diftance of fifteen or twenty miles, more or lefs, according to the diftance of the next great river; prefenting to our view a fine expanse of level graffy plains, detached forests and groves of Quercus alba, Q. lobata, Q. phillos, Q. hemispherica, Q. aquatica, with entire groves of the fplendid Nyffa fylvatica and perfumed Liquidambar styraciflua, vast Cane meadows, and lastly a chain of graffy favannas. Immediately from this we began to afcend gradually the most elevated, gravelly and stony ridge, confifting of parallel chains of broken fwelling hills, the very higheft chain frequently prefenting to view cliffs of the ferruginous rocks and red clay already noticed. This last mentioned high ridge divides the waters of the great rivers from each other, whence arife the fources of their numerous lateral branches, gradually increasing as they wind about the hills, fertilizing the vales and level plains, by their inundations, as they pour forth from the vaft humid forefts and fhaded prolific hills, and

### NORTH AMERICA.

and laftly, flow down, with an easy, meandering, fleady course, into the rivers to which they are tributary.

Our horfes by this time having recruited themfelves, by ranging at liberty and feeding in the rich young cane fwamps, in the vicinity of Apalachucla, we refumed our journey for Mobile, having here repaired our equipage, and replenifhed ourfelves with frefh fupplies of provifions. Our caravan was now reduced to its original number; the companies of traders who joined us at the Flat-rock, on our arrival at this town feparated from us, betaking themfelves to the feveral towns in the Nation, where they were refpectively bound. I fhall juft mention a very curious non-defcript fhrub, which I obferved growing in the fhady forefts, beneath the afcents, next bordering on the rich low lands of the river.

This stoloniferous shrub grows five or fix feet in height; many ftems usually afcend from one root or the fame fource; these feveral stems diverge from each other, or incline a little towards the earth. covered with a fmooth whitish bark, divided oppofitely, and the branches wreath and twift about. being ornamented with compound leaves; there being five lanceolate ferrated leaves, affociated upon one general long flender petiole, which fland oppofitely, on the branches, which terminate with a fpike, or panicle of white flowers, having an agreeable fcent : from the characters of the flowers, this fhrub appears to be a fpecies of Æsculus or Pavia, but as I could find none of the fruit and but a few flowers, quite out of feafon and imperfect. I am not certain.

CHAP.

# CHAP. VI.

JULY 13th we left the Apalachucla town, and three days journey brought us to Talaffe, a town on the Tallapoofe river, the North East great branch of the Alabama or Mobile river; having paffed over a vast level plain country of expansive favannas, groves, Cane fwamps and open Pine forefts, watered by innumerable rivulets and brooks. tributary to Apalachucla and Mobile. We now altered our courfe, turning to the left hand, South. erly, and defcending near the river banks, continually in fight of the Indian plantations and commons adjacent to their towns. Pafled by Otaffe, an an. cient famous Muscogulge town. The next fettlement we came to was Coolome, where we flayed two days, and having letters for Mr. Germany, the principal trader of Coolome, I meant to confult with him in matters relative to my affairs and future proceedings.

Here are very extensive old fields, the abandoned plantations and commons of the old town, on the East fide of the river; but the fettlement is removed, and the new town now stands on the opposite shore, in a charming fruitful plain, under an elevated ridge of hills, the fwelling beds or bases of which are covered with a pleasing verdure of grass; but the last ascent is steeper, and towards the summit discovers shelving rocky cliffs, which appear to be continually splitting and bursting to pieces, feattering their thin exfoliations over the tops of the grassy knolls beneath. The plain is narrow where the

the town is built : their houses are neat commodious buildings, a wooden frame with plaistered walls. and 100fed with Cyprefs bark or fhingles; every habitation confifts of four oblong fquare houses, of one ftory, of the fame form and dimensions, and fo fituated as to form an exact square, encompassing an area or court yard of about a quarter of an acre of ground, leaving an entrance into it at each corner. Here is a beautiful new square or areopagus, in the centre of the new town; but the ftores of the principal trader, and two or three Indian habitations, fland near the banks of the oppofite fhore on the fite of the old Coolome town. The Tallapoofe river is here three hundred yards over, and about fifteen or twenty feet deep: the water is very clear, agreeable to the tafte, efteemed falubrious, and runs with a fleady, active current.

Being now recruited and refitted, having obtained a guide to fet us in the great trading path for West Florida, early in the morning we fat off for Mobile : our progress for about eighteen miles was through a magnificent foreft, just without or skirting on the Indian plantations, frequently having a view of their diftant towns, over plains or old fields; and at evening we came to camp under fhelter of a grove of venerable fpreading Oaks, on the verge of the great plains; their enormous limbs loaded with Tillandfia ufneadfcites, waving in the winds : these Oaks were fome shelter to us from the violence of an extraordinary fhower of rain, which fuddenly came down in fuch floods as to inundate the earth, and kept us ftanding on our feet the whole night, for the furface of the ground was under water almost till morning. Early next morning, our guide having performed his duty, took leave.

leave, returning home, and we continued on our journey, entering on the great plains. We had not proceeded far before our people roufed a litter of young wolves, to which giving chace, we foon caught one of them, it being entangled in high grafs; one of our people caught it by the hind legs and another beat out his brains with the but of his gun, barbarous fport!—This creature was about half the fize of a fmall cur-dog, and quite black.

We continued over these expansive illumined graffy plains, or native fields, above twenty miles in length, and in width eight or nine, lying parallel to the river, which was about ten miles distance : they are invefted by high forefts, extensive points or promontories, which project into the plains on each fide, dividing them into many vaft fields opening on either hand as we paffed along, which prefents a magnificent and pleafing fylvan landfcape of primitive, uncultivated nature. Croffed feveral very confiderable creeks, their ferpentine courfes being directed across the plain by gently fwelling knolls perceptible at a diftance, but which feem to vanish or disappear as we come upon them; the creeks were waters of the Alabama, the name of the East arm of the Mobile below the confluence of the Tallapoofe. Thefe rivulets were ornamented by groves of various trees and fhrubs, which do not fpread far from their banks. I obferved amongft them the wild Crab (Pyrus coronaria), and Prunus Indica or wild Plumb, Cornus Florida, and on the graffy turf adjoining grew abundance of Strawberry vines: the furface of the plains or fields is clad with tall grafs, intermixed with a variety of herbage. The most conspicuous, both for beauty and novelty, is a tall species of Silphium; the radical leaves

### NORTH AMERICA.

leaves are large, long and lightly finuated, but those which garnish the stem are few and less finuated; thefe leaves, with the whole plant, except the flowers, appear of a whitish green colour, which is owing to a fine foft filky down or pubefcence; the flower stem, which is eight or ten feet in length when flanding erect, terminates upwards with a long heavy fpike of large golden yellow radiated flowers; the ftem is usually feen bowing on one fide or other, occafioned by the weight of the flowers, and many of them are broken, just under the panicle or fpike, by their own weight, after ftorms and heavy rains, which often crack or fplit the ftem, from whence exudes a gummy or refinous fubstance, which the fun and air harden into femi-pellucid drops or tears of a pale amber colour. This refin poffeffes a very agreeable fragrance and bitterifh taste, somewhat like frankincense or turpentine ; it is chewed by the Indians and traders, to cleanfe their teeth and mouth, and fweeten their breath.

The upper firatum or vegetable mould of thefe plains is perfectly black, foapy and rich, efpecially after rains, and renders the road very flippery: it lies on a deep bed of white, teftaceous, limeftone rocks, which in fome places refemble chalk, and in other places are firata or fubterrene banks of various kinds of fea fhells, as offrea, &c.: thefe diffolving near the furface of the earth, and mixing with the fuperficial mould, render it extremely productive.

Immediately after leaving the plains we enter the grand high forefts. There were ftately trees of the Robinea pfeudacacia, Tilia, Morus, Ulmus, Juglans exaltata, Juglans nigra, Pyrus coronaria, Cornus Florida, Cercis, &c. Our road now for feveral

feveral miles led us near the Alabama, within two or three miles of its banks: the furface of the land is broken into hills and vales, fome of them of confiderable elevation, covered with forefts of flately trees, fuch as already mentioned, but they are of a much larger growth than those of the fame kind which grow in the Southern or inhabited parts of Georgia and Carolina. We now left the river at a good diftance, the Alabama bearing away Southerly, and entered a valt open forest which continued above feventy miles, East and Weft, without any confiderable variation, generally a level plain, except near the banks of creeks that courfe through: the foil on the furface is a dufky brownish mould or fandy loam, on a foundation of ftiff clay; and the furface, pebbles or gravel mixed with clay on the fummits of the ridges : the forefts confift chiefly of Oak, Hiccory, Alh, Sour Gum (Nyffa fylvatica), Sweet Gum (Liquidambar ftyraciflua), Beech, Mulberry, Scarlet maple, Black walnut, Dog wood, Cornus Florida, Ælculus pa-via, Prunus Indica, Ptelea, and an abundance of Chefnut (Fag. caftanea) on the hills, with Finus tæda and Pinus lutea. During our progrefs over this vast high forest, we croffed extensive open plains, the foil gravelly, producing a few trees and fhrubs or undergrowth, which were entangled with Grape vines (Vitis campestris) of a peculiar species; the bunches (racemes) of fruit were very large, as were the grapes that composed them, though yet green and not fully grown, but when ripe they are of various colours, and their juice fweet and rich. The Indians gather great quantities of them, which they prepare for keeping, by first fweating them on hurdles over a gentle fire, and afterwards drying them on their bunches in the fun and air, and ftore them

up

up for provision. These Grape vines do not climb into high trees, but creep along from one low shrub to another, extending their branches to a great distance horizontally round about; and it is very pleasing to behold the clusters pendant from the vines, almost touching the earth; indeed some of them lie upon the ground.

We now entered a very remarkable grove of Dog wood trees (Cornus Florida), which continued nine or ten miles unalterable, except here and there a towering Magnolia grandiflora; the land on which they ftand is an exact level; the furface a fhallow, loofe, black mould, on a stratum of stiff, yellowish clay. These trees were about twelve feet high, fpreading horizontally; their limbs meeting and interlocking with each other, formed one vaft, fhady, cool grove, fo denfe and humid as to exclude the fun-beams, and prevent the intrusion of almost every other vegetable, affording us a most defirable shelter from the fervid fun-beams at noon-day. This admirable grove by way of eminence has acquired the name of the Dog woods.

During a progrefs of near feventy miles, through this high foreft, there conftantly prefented to view on one hand or the other, fpacious groves of this fine flowering tree, which mult, in the fpring feafon, when covered with bloffoms, prefent a moft pleafing fcene; when at the fame time a variety of other fweet fhrubs difplay their beauty, adorned in their gay apparel, as the Halefia, Stewartia, Æfculus pavia, Æfc. alba, Æfc. Florid. ramis divaricatis, thyrfis grandis, flofculis expansis incarnatis, Azalea, &c. entangled with garlands of Bignonia crucigera, Big.

Big. radicans, Big. fempervirens, Glycine frutefcens, Lonicera fempervirens, &c. and at the fame time the fuperb Magnolia grandiflora, ftanding in front of the dark groves, towering far above the common level.

The evening cool, we encamped on the banks of a glittering rivulet amidft a fpicy grove of the Illicium Floridanum.

Early next morning we arole, hunted up our horfes and proceeded on, continuing about twenty miles, over a district which prefented to view another landscape; expansive plains of Cane meadows, and detached groves, contrasted by fwelling ridges, and vales supporting grand forests of the trees al-ready noted, embellished with delightful creeks and brooks, the low grounds producing very tall canes, and the higher banks groves of the Illicium, Callicanthus, Stewartia, Halefia, Styrax and others, particularly Magnolia auriculata. In the evening we forded the river Schambe about fifty yards over, the ftream active but shallow, which carries its waters into the bay of Penfacola. Came to camp, on the banks of a beautiful creek, by a charming grove of the Illicium Floridanum: from this we travelled over a level country above fifty miles, very gently but perceptibly defcending South-Eaftward before us : this diffrict exhibited a landfcape very different from what had prefented to view fince we left the nation, and not much unlike the low countries of Carolina; it is in fact one valt, flat graffy favanna and Cane meadows, interfected or varioufly fcrolled over with narrow forefts and . groves, on the banks of creeks and rivulets, or hommocks and fwamps at their fources; with long leaved Pines, featteringly planted, amongft the grafs; and

\$.

and on the high fandy knolls and fwelling ridges, Quercus nigra, Quercus flammula, Quercus incana, with various other trees and fhrubs as already noted, inhabiting fuch fituations. The rivulets however exhibited a different appearance; they are fhallower, courfe more fwiftly over gravelly beds, and their banks are adorned with Illicium groves, Magnolias, Azaleas, Halefia, Andromedas, &c. The higheft hills near large creeks afford high forefts with abundance of Chefnut trees.

We now approached the bay Mobile, gently afcending a hilly diffrict, being the higheft foreft adjoining the extensive rich low lands of the river: thefe heights are fomewhat encumbered with pebbles, fragments and cliffs of rufty ferruginous rocks : the stones were ponderous and indicated very rich iron ore: here was a fmall diftrict of good land, on the acclivities and bafes of thefe ridges, and a level foreft below, watered by a fine creek, running into the Mobile. From hence we proceeded, again defcending, and travelled about nine miles generally over a level country confifting of favannas, Cane fwamps, and gentle rifing knolls, producing Pinus tæda, Nyffa fylvatica, Quercus rubra, Fagus caftanea, Fraxinus, with other trees. Arrived at Taenfa, a pretty high bluff, on the Eastern channel of the great Mobile river, about thirty miles above fort Condé, or city of Mobile, at the head of the bay.

Next day early in the morning I embarked in a boat, and proceeded for Mobile, along the banks of iflands (near twenty miles) which lay in the middle of the river, between the Eaftern and Western shores of the main : the banks of these low flat rich iflands are well cultivated, having on them extensive D d farms

farms and fome good habitations, chiefly the property of French gentlemen, who refide in the city, as being more pleafant and healthy. Leaving thefe iflands, we continued ten or twelve miles between the Eaftern main and a chain of low graffy iflands, too low and wet for cultivation; then croffed over the head of the bay, and arrived in town in the evening.

The city of Mobile is fituated on the eafy afcent of a rifing bank, extending near half a mile back on the level plain above; it has been near a mile in length, though now chiefly in ruins, many houfes vacant and mouldering to earth; yet there are a few good buildings inhabited by French gentlemen, Englifh, Scotch and Irifh, and emigrants from the Northern Britifh colonies. Meffrs. Swanfon and M'Gillivray who have the management of the Indian trade carried on with the Chicafaws, Chactaws, Upper and Lower Creeks, &c. have made here very extraordinary improvements in buildings.

The fort Condé, which stands very near the bay, towards the lower end of the town, is a large regular fortress of brick.

The principal French buildings are conftructed of brick, and are of one ftory, but on an extensive scale, four square, encompassing on three fides a large area or court yard: the principal apartment is on the fide fronting the street; they feem in some degree to have copied after the Creek habitation in the general plan: those of the poorer class are constructed of a strong frame of Cypress, filled in with brick, plaistered and white-washed infide and out.

July 31ft, 1778, the air being very hot and fultry, thermometer up at 87, we had exceffive thunder, and repeated

### NORTH AMERICA.

repeated heavy fhowers of rain, from morning until evening.

Not having an immediate opportunity from hence to Manchac, a British fettlement on the Miffissippi, I endeavoured to procure a light canoe, with which I defigned to pursue my travels along shore to the fettlements about Pearl river.

August 5th, fet off from Mobile up the river in a trading boat, and was landed at Taenfa bluff, the feat of Major Farmer, to make good my engagements, in confequence of an invitation from that worthy gentleman, to fpend fome days in his family: here I obtained the use of a light canoe, to continue my voyage up the river. The fettlement of Taenfa is on the fite of an ancient town of a tribe of Indians of that name, which is apparent from many artificial mounds of earth and other ruins. Befides Mr. Farmer's dwellings, there are many others inhabited by French families; who are chiefly his tenants. It is a most delightful fituation, commanding a fpacious profpect up and down the river, and the low lands of his extensive plantations on the opposite fhore. In my excursions about this place, I observed many curious vegetable productions, particularly a fpecies of Myrica (Myrica inodora): this very beautiful evergreen fhrub, which the French inhabitants call the Wax tree, grows in wet fandy ground about the edges of fwamps; it rifes erect nine or ten feet, dividing itself into a multitude of nearly erect branches, which are garnished with many shining deep green entire leaves of a lanceolate figure; the branches produce abundance of large round berries, nearly the fize of bird cherries, which are covered with a fcale or coat of white wax; no part of this plant poffeffes any de-Dd2 gree

404

gree of fragrance. It is in high estimation with the inhabitants for the production of wax for candles, for which purpose it answers equally well with bees-wax, or preferably, as it is harder and more lasting in burning.

Early on a fine morning I fet fail up the river, took the Eaft channel, and paffed along by well cultivated plantations on the fertile iflands, in the river on my left hand: thefe iflands exhibit every fhow of fertility; the native productions exceed any thing I had ever feen, particularly the Reeds or Canes (Arundo gigantea) grow to a great height and thicknefs.

-Early one morning, paffing along by fome old uncultivated fields, a few miles above Taenfa, I was ftruck with furprize at the appearance of a blooming plant, gilded with the richeft golden yellow: ftepping on fhore, I difcovered it to be a new species of the Oenothera (Oenothera grandiflora, caule erecto, ramofo, pilofo, 7, 8 pedali, foliis femi-amplexi-caulibus, lanceolatis, ferratodentatis, floribus magnis, fulgidis, fessilibus, capsulis cylindricis, 4 angulis,) perhaps the most pompous and brilliant herbaceous plant yet known to exist. It is an annual or biennial, rifing erect feven or eight feet, branching on all fides from near the earth upwards, the lower branches extensive, and the fucceeding gradually fhorter to the top of the plant, forming a pyramid in figure; the leaves are of a broad lanceolate shape, dentated or deeply ferrated, terminating with a flender point, and of a deep full green colour; the large expanded flowers, that for ornament this plant, are of a splendid perfect yellow colour; but when they contract again, before they drop off, the underfide of the petals next the calyx

calyx becomes of a reddifh flefh colour, inclining to vermillion; the flowers begin to open in the evening, are fully expanded during the night, and are in their beauty next morning, but close and wither before noon. There is a daily profuse fucceffion for many weeks, and one fingle plant at the fame inftant prefents to view many hundred flowers. I have measured these flowers above five inches in diameter, they have an agreeable fcent.

After leaving these splendid fields of the golden Oenothera, I passed by old deferted plantations and high forests; and now having advanced above ten miles, landed at a bluff, where mooring my bark in a fasse harbour, I ascended the bank of the river, and penetrating the groves, came presently to old fields, where I observed ruins of ancient habitations, there being abundance of Peach and Fig trees, loaded with fruit, which affording a very acceptable defert after the heats and toil of the day, and evening drawing on apace, I concluded to take up my quarters here for the night. The Fig trees were large as well as their fruit, which was when ripe, of the state of pears, and as large, and of a dark bluiss purple colour.

Next morning I arole early, continuing my voyage; paffed by, on each hand, high forefts and rich fwamps, and frequently ruins of ancient French plantations; the Canes and Cyprefs trees of an aftonifhing magnitude, as were the trees of other tribes, indicating an excellent foil. Came to at noon, and advancing forward from the river, and penetrating the awful fhades, paffed between the ftately columns of the Magnolia grandiflora, and came to the afcents fupporting the high forefts and expansive plains above—What a fylvan fcene is here!

here! the pompous Magnolia reigns fovereign of the forefts; how fweet the aromatic Illicium groves! how gaily flutter the radiated wings of the Magnolia auriculata, each branch fupporting an expanded umbrella, fuperbly crefted with a filver plume, fragrant bloffom, or crimfon fludded ftrobile and fruits! I recline on the verdant bank, and view the beauties of the groves, Æfculus pavia, Prunus nemoralis, floribus racemofis, foliis fempervirentibus, nitidis, Æfculus alba, Hydrangia quercifolia, Caffine, Magnolia pyramidata, foliis ovatis, oblongis, acuminatis, bafi auriculatis, ftrobilo oblongo ovato, Myrica, Rhamnus frangula, Halefea, Bignonia, Azalea, Lonicera, Sideroxylon, with many more.

Returned to the river, re-embarked, and at evening came to, in fight of the confluence or junction of the two large arms of the great Mobile river, i. e. the Tombigbe or Chicafaw with the Alabama or Coofau. About one hundred and fifty miles above this conflux, at Ft. Thouloufe, the Alabama receives into it from the East the great Talapoofe river, when the former takes the name of Coofau, which it bears to its fource, which is in the So. West promontories of the Cherokee or Apalachian Mountains in the Chicafaw territories.

Obferved very large alligators, basking on the shores, as well as swimming in the river and lagoons.

Next morning entered the Tombigbe, and afcended that fine river. Juft within its Capes, on the left hand, is a large lagoon, or capacious bay of ftill water, containing many acres in furface, which at a diftant view prefents a very fingular and diverting fcene; a delufive green wavy plain of the Nymphæa

Nymphæa Nelumbo: the furface of the water is overfpread with its round floating leaves, whilft thefe are fhadowed by a foreft of umbrageous leaves with gay flowers, waving to and fro on flexible ftems, three or four feet high: these fine flowers are double as a rofe, and when expanded are feven or eight inches in diameter, of a lively lemon yellow colour. The feed veffel when ripe, is a large truncated, dry porous capfule, its plane or difk regularly perforated, each cell containing an oval offeous gland or nut, of the fize of a filbert; when thefe are fully grown, before they become quite hard, they are fweet and pleafant eating, and tafte like chefnuts : I fed freely on them without any injury, but found them laxative. I have observed this aquatic plant, in my travels along the Eaftern fhores of this continent, in the large rivers and lakes, from New-Jerfey to this place, particularly in a large pond or lake near Cape Fear river in North Carolina, which is about two miles over and twelve feet water, notwithstanding which its furface is almost covered with the leaves of this plant; it alfo abounds in Wakamaw lake near the fame river, and in Savanna river at Augusta, and all over East Florida.

Proceeding up the river, came to at a very high fleep bluff of red and particoloured tenacious clay, under a deep ftratum of loofe fandy mould: after afcending this fleep bank of the river, I found myfelf in an old field, and penetrating the forefts furrounding, obferved them to be young growth, covering very extensive old plantations, which was evident from the ridges and hillocks which once raifed their Corn (Zea), Batatas, &c. I fuppofe this to be the fite of an ancient fortified poft of the French, French, as there appear veftiges of a rampart and other traces of a fortrefs; perhaps fort Louis de la Mobile; but in all probability it will not remain long vifible, the ftream of the river making daily encroachments on it, by carrying away the land on which it ftood.

Obferved here amongst other vegetable productions, a new fpecies, or at least a variety, of Halefia diptera: these trees are of the fize and figure of ordinary Mulberry trees, their stems short, and tops regular and spreading, and the leaves large and broad, in fize and figure refembling those of our common wild Mulberry.

Opposite this bluff, on the other fide of the river. is a diffrict of fwamp or low land, the richeft I ever faw, or perhaps any where to be feen: as for the trees I shall forbear to deferibe them, becaufe it would appear incredible; let it fuffice to mention, that the Cyprus, Ash, Platanus, Populus, Liquidambar, and others, are by far the tallest, straightest and every way the most enormous that I have feen or heard of. And as a proof of the extraordinary fertility of the foil, the reeds or canes (Arundo gigantea) grow here thirty or forty feet high, and as thick as a man's arm, or three or four inches in diameter ; I suppose one joint of some of them would contain above a quart of water; and these reeds serve very well for fetting poles, or mafts for barks and canoes. Continued yet afcending this fine river, paffing by the most delightful and fertile fituations : obferved frequently, on bluffs of high land, deferted plantations, the houfes always burnt down to the ground, and ancient Indian villages. But perceiving little variation in the natural vegetable productions, the current of the river preffing down with

with increafed force and velocity, I turned about, defcending the river, and next evening came to at a large well cultivated plantation, where I lodged all night, and the evening following returned to Taenfa.

Next day I felt fymptoms of a fever, which in a few days laid me up and became dangerous. But a dofe of Tart. Emet. broke its violence; and care and good attendance, after a few days in fome degree reftored my health, at leaft, fo far as to enable me to rove about the neighbouring forefts; and here being informed of a certain plant of extraordinary medical virtues, and in high effimation with the inhabitants, which grew in the hilly land about thirty miles higher up the river, I refolved to fet out in fearch of it, the Major being fo polite and obliging as to furnifh me with horfes to ride, and a Negro to pilot and take care of me.

Sat off in the morning, and in the courfe of the day's journey croffed feveral creeks and brooks, one of which fwam our horfes. On paffing by a fwamp at the head of a bay or lagoon of the river, 1 obferved a fpecies of Cyprefs; it differs a little from the white Cedar of New-Jerfey and Pennfylvania (Cupreffus thyoides), the trunk is fhort and the limbs fpread horizontally, the branches fuller of leaves and the cones larger and of a crimfon or reddifh purple colour when ripe.

After leaving the low grounds and afcending the hills, difcovered the plant I went in fearch of, which I had before frequently obferved in my defcent from the Creek nation down towards Taenfa. This plant appears to be a fpecies of Collinfonia; it

it is diuretic and carminative, and efteemed a powerful febrifuge, an infufion of its tops is ordinarily drunk at breakfaft, and is of an exceeding pleafant tafte and flavour : when in flower, which is the time the inhabitants gather it for prefervation and ufe, it poffeffes a lively aromatic fcent, partaking of lemon and anifeed. Lodged this night at a plantation near the river, and met with civility and good entertainment. The man and his three fons are famous hunters. I was affured from good authority that the old gentleman, for his own part, kills three hundred deer annually, befides bears, tygers, and wolves.

Next morning early, fat off again, on my return, and taking a different path back, for the fake of variety, though fomewhat farther about and at a greater diftance from the banks of the river, obferved abundance of the tall blue Sage: it grows fix or feven feet high; many ftems arife from one root or fource; thefe ftems are thick, woody and quadrangular, the angles obtufe: the narrow lanceolate and ferrated leaves are placed oppofite, and are feffile, lightly embracing the branches, which terminate with fpikes of large flowers of a celefial blue colour.

Thefe ftony gravelly heights produce a variety of herbaceous plants, but one in particular I fhall mention on account of its fingular beauty: I believe it is a fpecies of Gerardea (Gerardea flammea); it grows erect, a fingle ftem from a root, three or four feet in height, branching very regularly from about one half its length upwards, forming a cone or pyramid, profufely garnifhed with large tubular labiated fearlet or flame coloured flowers, which give the plant a very fplendid appearance, even at a great

## NORTH AMERICA.

'a great distance. Returned home in the evening fully fatisfied with the day's excursion, from the discovery of many curious and beautiful vegetables.

Having advice from Mobile of an opportunity to Manchac, although my health was not established, feverish fymptoms continuing to lurk about me, I refolved, notwithstanding, immediately to embrace this offer, and embarked again, defcending the river to the city in company with Dr. Grant, a phyfician of the garrison, and late in the evening arrived in town, having fuffered a smart fit of the fever by the way.

In the course of conversation with the doctor, I remarked that during my travels fince leaving the Creek nation, and when there, I had not feen any honey bees. He replied, that there were few or none West of the isthmus of Florida, and but one hive in Mobile, which was lately brought there from Europe, the English supposing that there were none in the country, not finding any when they took poffeffion of it after the Spanish and French. I had been affured by the traders that there were none in Weft Florida, which to me feemed extraordinary and almost incredible, fince they are fo numerous all along the Eaftern continent from Nova Scotia to East Florida, even in the wild forests, as to be thought, by the generality of the inhabitants, aborigines of this continent.

The boat in which I had taken a paffage to Pearl river, not being in readinefs to depart for feveral days to come, I fought opportunities to fill up this time to the beft advantage poffible; and hearing of a boat going to the river Perdedo, for the purpofe of fecuring the remains of a wreck, I apprehended hended this favourable time to go and fearch that coaft, the captain civilly offering me a paffage and birth with him in a handfome light failing-boat. Set fail early on a fine morning, and having a brifk leading breeze, came to in the evening juft within Mobile point; collected a quantity of drift wood to keep up a light and finoke away the mufquitoes, and refted well on the clean fandy beach until the cool morning awoke us. We hoifted fail again, and foon doubled the point or Eaft promontory of the cape of the bay, ftretching out many miles and pointing towards Dauphin ifland, between which and this cape is the fhip channel.

Coafting along the fea-fhore Eaftward, we foon came up to the wreck, which being already ftripped of her fails, &c. our captain kept on for Penfacola, where we arrived late in the evening.

My arrival at this capital, at prefent the feat of government, was merely accidental and undefigned : and having left at Mobile all my papers and teftimonials, I defigned to conceal my avocations, but my name being made known to Dr. Lorimer, one of the honourable council, he fent me a very polite invitation, and requested that he might acquaint governor Chefter of my arrival, who he knew would expect that I fhould wait on him, and would be pleafed to fee me. I begged to be excufed, at this time, as the boat would fail back for Mobile in a few hours, in which I was under the neceffity of returning, or must lose my passage to the Missifippi; but during this expostulation I received a letter from Mr. Livingston the fecretary, whom I waited upon, and was received very respectfully and treated with the utmost politeness and affability. Soon after, the governor's chariot paffed by, his excellency returning

## NORTH AMERICA.

413

ing from a morning vifit to his farm a few miles from Penfacola. Mr. Livingfton went with me and introduced me to the governor, who commended my purfuits, and invited me to continue in Weft Florida in refearches after fubjects of natural hiftory, &c. nobly offering to bear my expences, and a refidence in his own family as long as I chofe to continue in the colony; very judicioufly obferving, that a complete inveftigation of its natural hiftory could not be accomplifhed in a fhort fpace of time, fince it would require the revolution of the feafons to difcover and view vegetable nature in all her various perfections.

The captain of our fortunate bark by this time being ready to fail, I took leave of his excellency the governor, and bid adieu to my friends Dr. Lorimer, Mr. Livingston, and others: fet fail about noon on our return, and came to again within the capes of Mobile river.

Since I have hitherto given a fuperficial account of the towns, ports, improvements and other remarkable productions of nature, and human arts and industry, during the course of my perigrination, I shall not pass by Pensacola and its environs. This city commands fome natural advantages, fuperior to any other port in this province, in point of naval commerce, and fuch as human art and ftrength can never fupply. It is delightfully fituated upon gentle rifing afcents environing a fpacious harbour, fafe and capacious enough to fhelter all the navies of Europe, and excellent ground for anchorage ; the West end of St. Rose island stretches across the great bay St. Maria Galves, and its South-Weft projecting point forms the harbour of Penfacola, which. which, with the road or entrance, is defended by a block-houfe built on the extremity of that point, which at the fame time ferves the purpole of a fortrefs and look-out tower. There are feveral rivers which run into this great bay from the continent, but none of them navigable for large craft. to any confiderable diftance into the country : the Shambe is the largest, which admits shallops fome miles up, and perriauguas upwards of fifty miles. There are fome fpots of good high land, and rich fwamps, favourable for the production of rice on the banks of this river, which have given rife to fome plantations producing Indigo, Rice, Corn, Batatas, &c. Thefe rivers dividing and fpreading abroad their numerous branches, over the expanfive flat low country (between the two great rivers Apalachucla and Mobile), which confilts of favannas and cane meadows, fill them with brooks and water courfes, and render them exuberant pafture for cattle.

There are feveral hundred habitations in Penfacola; the governor's palace is a large ftone building ornamented with a tower, built by the Spani-The town is defended by a large flockado forards. trefs, the plan a tetragon with falient angles at each corner, where is a block-houfe or round tower, one ftory higher than the curtains, where are light cannon mounted : it is constructed of wood. Within this fortrefs is the council chamber; here the records are kept, houfes for the officers and barracks for the accommodation of the garrifon, arfenal, magazine, &c. The fecretary refides in a spacious, neat building: there are feveral merchants and gentlemen of other professions, who have respectable and convenient buildings in the town.

There

There were growing on the fand hills, environing Penfacola, feveral curious non-defcribed plants: particularly one of the verticillate order, about eighteen inches in height: the flowers, which formed loofe fpikes, were large and of a fine fcarlet colour; but not having time to examine the fructification, or collect good specimens, I am ignorant of what order or genus it belongs to. And in the level wet favannas grew plentifully a new and very elegant species of Saracinia (Saracinia lacuno-(a); the leaves of this plant, which are twelve or fourteen inches in length, stand nearly erect, are round, tubular and ventricofe-but not ridged with longitudinal angles or prominent nerves, as the leaves of the Saracinia flava are: the aperture at top may be fhut up by a cap or lid, of a helmet form, which is an appendage of the leaf, turning over the orifice in that fingular manner; the ventricofe, or inflated part of the leaf, which is of a pale, but vivid green colour, is beautifully ornamented with rofe coloured fluds or blifters, and the inner furface curioufly inferibed, or variegated, with crimfon veins or fibres. It was past the time for flowering, but the plant in any fituation is a very great curiofity.

Next morning early we arole from our hard fandy fea-beaten couch, being diffurbed the whole night by the troublefome mulquitoes; fet fail, and before night returned fafe to the city of Mobile.

CHAP.

# C H-A P. VII.

THE next day after my return to Mobile, I found myself very ill, and not a little alarmed by an exceffive pain in my head, attended with a high fever : this diforder foon fettled in my eyes, nature purfuing that way to expel the malady, caufing a most painful defluxion of pellucid, corrosive water; notwithstanding, I next day fet off on board a large trading boat, the property of a French gentleman, and commanded by him (he being general interpreter for the Chactaw nation), on his return to his plantations, on the banks of Pearl river: our bark was large, well equipped for failing, and manned with three flout Negroes, to row in cafe of neceffity. We embarked in the evening, and came to about fix miles below the town, at a pleafant farm, the master of which (who was a Frenchman) entertained us in a very polite and friendly manner. The wind favourable, next morning early we fet fail again, and having made extraordinary way, about noon came up abreaft of a high fteep bluff, or perpendicular cliff of high land, touching on the bay of the Weft coaft, where we went on fhore, to give liberty to the flaves to reft and refresh themfelves. In the mean time I accompanied the captain on an excursion into the spacious level forefts, which foread abroad from the fhore to a great diftance back; obferved veftiges of an ancient fortrefs and fettlement, and there yet remain a few pieces of iron cannon; but what principally attracted my notice, was three vaft iron pots or kettles, each of many hundred gallons contents : upon inquiry,

inquiry, my affociate informed me they were for the purpofe of boiling tar to pitch, there being vaft forefts of Pine trees in the vicinity of this place. In Carolina the inhabitants purfue a different method; when they defign to make pitch, they dig large holes in the ground, near the tar kiln, which they line with a thick coat of good clay, into which they conduct a fufficient quantity of tar, and fet it on fire, fuffering it to flame and evaporate a length of time fufficient to convert it into pitch, and when cool, lade it into barrels, and fo on until they have confumed all the tar, or made a fufficient quantity of pitch for their purpofe.

After re-imbarking, and leaving this bluff a few miles, we put in to fhore again, and came to a farm houfe, a little diffance from the water, where we fupplied ourfelves with Corn meal, Batatas, bacon, &c. The French gentleman (proprietor of the plantation) was near eighty years old, his hair almost white with age, yet he appeared active, ftrong and mufcular; and his mother who was prefent, was one hundred and five years old, active and cheerful, her eyes feemed as brifk and fparkling as youth, but fhe was of a diminutive fize, not half the ftature and weight of her fon: it was now above fifty years fince the came into America from old France.

I embarked again, proceeding down the bay, and in the evening doubled the weft point or cape of the bay, being a promontory of the main, between which and Dauphin ifland, we entered the channel Oleron. From this time, until we arrived at this gentleman's habitation on Pearl river, I was incapable of making any obfervations, for my eyes could not bear the light, as the leaft ray admitted feemed E e

as the piercing of a fword : and by the time I had attived at Pearl river, the excruciating pain had rendered me almost frantic and stupified for want of fleep, of which I was totally deprived; and the corroding water, every few minutes, ftreaming from my eyes, had stripped the skin off my face, in the fame manner as fealding water would have done. I continued three days with this friendly Frenchman, who tried every remedy, that he or his family could recollect, to administer relief, but to no purpose. My fituation was now become dangerous, and I expected to fink under the malady, as I believe my friends here did. At last the man informed me, that on Pearl island, about twelve miles distance, refided an English gentleman, who had a variety of medicines, and if I chofe to go to him he would take me there. I accordingly bid adieu to this hofpitable family, and fet off with him in a convenient boat ; before night arrived at Mr. Rumfey's, who received me kindly, and treated me with the utmost humanity, during a ftay of four or five weeks. The night however after my arrival here I fincerely thought would be my laft, and my torments were fo extreme as to defire it: having furvived this tedious night, I in fome degree recovered my fenfes, and afked Mr. Rumfey if he had any Cantharides; he foon prepared a bliftering plaifter for me, which I directed to be placed betwixt my fhoulders; this produced the defired relief, and more than answered my expectation, for it had not been there a quarter of an hour before I fell afleep, and remained fo a whole day, when I awoke intirely relieved from pain, my fenfes in perfect harmony and mind composed. I do not know how to express myfelf on this occasion; all was peace and tranquillity: although I had my fight imperfectly, yet my body body feemed but as a light fhadow, and my existence as a pleasing delirium, for I fometimes doubted of its reality. I however, from that moment began to mend, until my health was perfectly reftored; but it was feveral weeks before I could expose my eyes to open day-light, and at last I found my left eye confiderably injured, which fuffered the greatest pain and weight of the difease.

As foon as I acquired ftrength to walk about, and bear the leaft impression of open day-light on my eyes, I made frequent, indeed I may fay daily excursions in and about this island, strolling through its awful shades, venerable groves and sublime foress, consisting of the Live Oaks and Magnolia grandissor, Laurus Borbonia, Olea Americana, Fagus sylvatica, Laur. Sassafas, Quercus hemispherica, Tilia, Liquidambar styracistua, Morus, Gleditsia, Callicarpa, Halesia, &c.

The ifland is fix or feven miles in length, and four or five in width, including the falt marshes and plains, which inveft it on every fide, I believe we may only except a narrow ftrand at the South end of it, washed by Lake Borgone at the Regullets, which is a promontory composed of banks of feafhells and fand caft up by the force of winds, and the furf of the Lake; these shells are chiefly a small fpecies of white clam shells, called les coquilles. Here are a few fhrubs growing on these shelly heights, viz. Rhamnus frangula, Sideroxylon, Myrica, Zanthoxylon clava Herculis, Juniperus Americana, Lyfium falfum; together with feveral new genera and fpecies of the herbaceous, and fuffruticofe tribes, Croton, Stillingia, &c. but particularly a species of Mimofa (Mimofa virgata), which in respect of the elegancy of its pinnated leaves, can Ee 2 not

not be exceeded by any of that celebrated family. It is a perennial plant, fending up many nearly erect ftems from the root or fource; thefe divide themfelves into many afcendant flender rods like branches, which are ornamented with double pinnated leaves, of a most delicate formation. The compound flowers, are of a pale, greenish yellow, collected together in a small oblong head, upon a long flender peduncle, the legumes are large, lunated and flat, placed in a spiral or contorted manner, each containing feveral hard compressed feeds or little beans.

The interior and by far the greater part of the island confists of high land; the foil to appearance a heap of fea fand in fome places, with an admixture of fea shells; this foil, notwithstanding its fandy and steril appearance, when divested of its natural vegetative attire, has from what caufe I know not, a continual refource of fertility within itfelf: the furface of the earth, after being cleared of its original vegetable productions, exposed a few feafons to the fun, winds, and triturations of agriculture, appears fcarcely any thing but heaps of white fand, vet it produces Corn (Zea), Indigo, Batatas, Beans, Peas, Cotton, Tobacco, and almost every fort or esculent vegetable, in a degree of luxuriancy very furprizing and unexpected, year after year, incelfantly, without any addition of artificial manure or compost: there is indeed a foundation of ftrong adhefive clay, confifting of strata of various colours, which I difcovered by examining a well, lately dug in Mr. Rumfey's yard; but lying at a great depth under the furface, the roots of fmall fhrubs and herbage, cannot reach near to it, or receive any benefit, unlefs we may fuppofe, that afcending fumes

## NORTH AMERICA.

fumes or exhalations, from this bed of clay, may have a vivific nutritive quality, and be received by the fibres of the roots, or being condenfed in the atmosphere by nocturnal chills, fall with dews upon the leaves and twigs of these plants, and there abforbed, become nutritive or exhilerating to them.

Befides the native foreft trees and fhrubs already noted, manured fruit trees arrive in this ifland to the utmost degree of perfection, as Pears, Peaches, Figs, Grape Vines, Plumbs, &c.; of the last mentioned genus, there is a native species grows in this island, which produces its large oblong crimfon fruit in prodigious abundance; the fruit, though of a most enticing appearance, is rather too tart, yet agreeable eating, at fultry noon, in this burning climate; it affords a most delicious and reviving marmalade, when preferved in fugar, and makes excellent tarts; the tree grows about twelve feet high, the top spreading, the branches spiny and the leaves broad, nervous, ferrated, and terminating with a subulated point.

My eyes having acquired fufficient ftrength to endure the open day light, I fet off from Pearl ifland, for Manchac on the Miffiffippi, in a handfome large boat, with three Negroes to navigate her. Leaving the friendly Mr. Rumfey's feat on Pearl Ifland, we defcended a creek from the landing near his houfe; this creek led us about a mile, winding through falt fedgy marfhes, into Lake Pontchartrain, along whofe North fhores we coafted about twenty miles, having low, reedy marfhes, on our ftarboard : thefe marfhes were very extenfive between us and the far diftant high forefts on the main : at evening the fhore became bolder, with fandy elevations, affording a few dwarf Oaks, Zanthoxylon. thoxylon, Myrica and Rham. frangula. We came to in a little bay, kindled a fire, and after fupper betook ourfelves to repofe; our fituation open, airy and cool, on clean fand banks; we refted quietly, though fometimes roufed by alarms from the crocodiles, which are here in great numbers, and of an enormous bulk and ftrength.

Next day early we got under way, purfuing our former courfe, nearly Westward, keeping the North fhore feveral leagues. Immediately back of this high fandy ftrand, (which is caft up by the beating furf and winds, fetting from feaward, acrofs the wideft part of the lake) the ground fuddenly falls, and becomes extensive flat Cyprefs fwamps, the fources of creeks and rivers, which run into the lake, or Pearl River, or other places; the high forefts of the main now gradually approaching the lake, advance up to the very fhore, where we find houfes, plantations and new fettlements : we came to at one of them charmingly fituated, fet fail again, and came up to the mouth of the beautiful Taenfapaoa, which takes that name from a nation of Indians, who formerly poffeffed the territories lying on its banks, which are fertile and delightful regions. This river is narrow at its entrance, but deep, and faid to be navigable for large barks and periauguas upwards of fifty miles, just within its capes, on the leeward fhore, are heights, or a group of low hills (composed of the fmall clam fhells, called les coquilles), which gradually deprefs as we retreat back from the river, and the furface of the land is more level; these shells diffolving and mixing with the furface, render the vegetative mould black, rich, and productive. Here are a few habitations, and fome fields cleared and cultivated; but the inhabitants

inhabitants neglect agriculture, and generally employ themfelves in hunting and fifhing: we however furnifhed ourfelves here with a fufficiency of excellent Batatas. I obferved no new vegetable productions, except a fpecies of Cleome (Cleome lupinifolia); this plant poffeffes a very ftrong fcent, fomewhat like Gum Affafetida, notwithftanding which the inhabitants give it a place in foups and fauces.

From Taenfapaoa, we still coasted Westward, three or four miles, to the straits that communicate with the lake Maurepas; entering which and continuing fix or eight miles, having low fwampy land on each fide, the channel divides, forming an island in the middle of the pafs : we took the right hand channel, which continues three or four miles, when the channels reunite in full view of the charming lake. We came to at an elevated point, or promontory, on the ftarboard main fhore, it being the North cape, from whence I enjoyed a very pleafing and complete view of the beautiful lake Maurepas; entering which next morning, a fleady favourable gale foon wafted us nine or ten miles over to the mouth of the river Amite; afcended between its low banks; the land on each fide a level fwamp, about two feet above the furface of the water, fupporting a thick foreft of trees, confifting chiefly of Fraxinus, Nyffa aquatica, Nyffa multiflora, Cupreffus difticha, Quercus phillos, Acer rubrum; Ac negundo, Acer glaucum, Sambucus, Laurus Borbonia, Carpinus, Ulmus, and The foil or earth humid, black and rich. others. There is fcarcely' a perceptible current: the water dark, deep, turgid and ftagnate, being from fhore to fhore covered with a fcum or pellicle of a green and purplish cast, and perpetually throwing up from

from the muddy bottom to its furface minute air bladders or bubbles: in fhort, these dark load frme waters, from every appearance, feem to be a lisong extract or tincture of the leaves of the most herbs and reeds, arifing from the thores, and such about overforead them, and floar on the furface, informuch that a great part of thele flag name orders, during the fummer and autumnal ferious are constrained to pafs under a load of grais and weeds; which are continually vegetating, and fr and ig over the furface from the banks, und the riding floods of winter and fpring, rufhing down from the main, fweep them away, and purify the waters. Late in the evening we differented a narrow ridge of land clofe to the river bank, high and dry enough to fuffer us to kindle a fire, and fpace fufficient to fpread our. bedding on. But here, fire and fmoke were infufficient to expel the hofts of mulquitoes that invefted our camp, and kept us awake during the long and tedious night, fo that the alligators had no chance of taking us napping. We were glad to rife early in the morning, proceeding up the Amite. The land now gradually rifes, the banks become higher, the foil drier and firmer four or five feet above the furface of the river, the trees are of an incredible magnitude, particularly Platanus occidentalis, Fraxinus, ulmus, Quercus hemispherica, &c. The Canna Indica grows here in furprifing luxuriance, prefenting a glorious fhow; the ftem rifes fix, feven and nine feet high, terminating upwards with fpikes of fcarlet flowers.

Now having advanced near thirty miles up the Amite, we arrived at a very large plantation, the property of a Scotch gentleman, who received me with

## NORTH AMERICA.

with civility, entreating me to refide with him; but being impatient to get to the river, and pleading the neceffity of profecuting my travels with alacrity. on account of the feafon being fo far advanced, I was permitted to proceed, and fet off next morning. Still afcending the Amite about twenty miles farther, arrived at the forks, where the Iberville comes in on the left hand, afcending which a little way, we foon came to the landing, where are warehouses for depositing merchandize, this being the extremity of navigation up this canal, and here fmall veffels load and unload. From this place to Manchac, on the banks of the Miffiflippi, just above the mouth of the canal, is nine miles by land; the road ftraight, fpacious, and perfectly level, under the fhadow of a grand foreft; the trees of the first order in magnitude and beauty, as Magnolia grandiflora, Liriodendron tulipifera, Platanus, Juglans nigra, Fraxinus excelfior, Morus rubra, Laurus faffafras, Laurus Borbonia, Tilea, Liquidambar ftyraciflua, &c.

At evening arrived at Manchac, when I directed my fteps to the banks of the Midliflippi, where I ftood for a time as it were fafcinated by the magnificence of the great fire \* of rivers.

The depth of the river here, even in this feafon, at its loweft ebb, is aftonifhing, not lefs than forty fathoms; and the width about a mile or fomewhat lefs: but it is not expansion of furface alone that ftrikes us with ideas of magnificence; the altitude and theatrical afcents of its pensile banks, the steady course of the mighty flood, the trees, high forefts, even every particular object, as well as focie-

\* Which is the meaning of the word Miffiffippi.

ties, bear the ftamp of fuperiority and excellence : all unite or combine in exhibiting a profpect of the grand fublime. The banks of the river at Manchac, though frequently overflowed by the vernal inundations, are about fifty feet perpendicular height above the furface of the water (by which the channel at those times must be about two hundred and ninety feet deep); and these precipices being an accumulation of the fediment of muddy waters, annually brought down with the floods, of a light loamy confiftence, continually cracking and parting, prefent to view deep yawning chafms, in time fplit off, as the active perpetual current undermines; and the mighty maffes of earth tumble headlong into the river, whole impetuous current fweeps away and lodges them elfewhere. There are yet vifible fome remains of a high artificial bank, in front of the buildings of the town, formerly caft up by the French, to refift the inundations, but found to be ineffectual, and now in part tumbled down the precipice: as the river daily encroaches on the bluff, fome of the habitations are in danger, and must be very foon removed or fwallowed up in the deep gulph of waters. A few of the buildings that have been eftablished by the English fince taking possession of the colony, are large and commodious, particularly the warehoufes of Meffrs. Swanfon & Co. Indian traders and merchants.

The Spaniards have a fmall fortrefs and garrifon on the point of land below the Iberville, clofe by the banks of the river, which has a communication with Manchac, by a flender narrow wooden bridge acrofs the channel of Iberville, fupported on wooden pillars, and not a bow fhot from the habitations of Manchac. The Iberville in the fummer feafon

feafon is dry, and its bed twelve or fifteen feet above the furface of the Miffiffippi; but in the winter and fpring has a great depth of water, and a very rapid ftream which flows into the Amite, thence down through the lakes into the bay of Pearls to the ocean.

Having recommendations to the inhabitants of Batonrouge, now called New-Richmond, more than forty miles higher up the river, one of these gentlemen being prefent at Manchac, gave me a friendly and polite invitation to accompany him on his return home. A pleafant morning; we fat off after breakfast, well accommodated in a handfome convenient boat, rowed by three blacks. Two miles above Manchac we put in to fhore at Alabama: this Indian village is delightfully fituated on feveral fwelling green hills, gradually afcending from the verge of the river: the people are a remnant of the ancient Alabama nation, who inhabited the East arm of the great Mobile river, which bears their name to this day, now poffeffed by the Creeks or Muscogulges, who conquered the former.

My friend having purchafed fome bafkets and earthenware, the manufactures of the people, we left the village, and proceeding twelve miles higher up the river, landed again at a very large and well cultivated plantation, where we lodged all night. Obferved growing in a fpacious garden adjacent to the houfe, many ufeful as well as curious exotics, particularly the delicate and fweet Tube-rofe (Polyanthus tuberofa): it grows here in the open garden; the flowers were very large and abundant on the ftems, which were five, fix or feven feet high, but I faw none here having double flowers. In one corner of the garden was a pond or marfh, round about which

which grew luxuriantly the Scotch grafs (Panicum hirtellum, gramen panicum maximum, fpica divifa, aristis armatum, Sloan, Jam. Cat. p. 30): the people introduced this valuable grafs from the Weft-Indian iflands: they mow or reap it at any time, and feed it green to cows or horfes; it is nourifhing food for all cattle. The Humble plant (Mimofa pudica) grows here five or fix feet high, rambling like Brier vines over the fences and shrubs, all about the garden. The people here fay it is an indigenous plant, but this I doubt, as it is not feen growing wild in the forefts and fields, and it differs in no refpect from that which we protect in green houses and stoves, except in the extent and luxuriancy of its branches, which may be owing to the productive virgin mould and temperature of the climate. They however pay no attention to its culture, but rather condemn it as a noxious troublefome weed, for wherever it gets footing, it fpreads itfelf by its feed in fo great abundance as to opprefs and even extirpate more uleful vegetables.

Next day we likewife vifited feveral delightful and fpacious plantations on the banks of the river, during our progrefs upwards: in the evening arrived at my friend's habitation, a very delightful villa, with extensive plantations of Corn (Zea), Indigo, Cotton and fome Rice.

A day or two after our arrival we agreed upon a vifit to Point Coupè, a flourishing French fettlement on the Spanish shore of the Mississippi.

Early rext morning we fet off in a neat Cyprefs boat with three oars, proceeding up the river; and by night got to a large plantation near the White cliffs, cliffs, now called Brown's cliffs, in honour of the late governor of Weft Florida, now of the Bahama Iflands, who is proprietor of a large diffrict of country, lying on and adjacent to the Cliffs. At the time of my refidence with Mr. Rumfey at Pearl ifland, governor Brown, then on his paffage to his government of the Bahamas, paid Mr. Rumfey a vifit, who politely introduced me to his excellency, acquainting him with my character and purfuits : he defired me to explore his territory, and give him my opinion of the quality of the White plains.

August 27th, 1777, having in readiness horses well equipt, early in the morning we set off for the plains. About a mile from the river we croffed a deep gully and fmall rivulet, then immediately entered the Cane forests, following a straight avenue cut through them, off from the river, which continued about eight miles, the ground gradually but imperceptibly rifing before us : when at once opened to view expansive plains, which are a range of native graffy fields of many miles extent, lying parallel with the river, furrounded and interfected with Cane brakes and high forefts of flately trees; the foil black, extremely rich and productive, but the virgin mould becomes thinner and lefs fertile as it verges on to the plains, which are fo barren as fcarcely to produce a bufh or even grafs, in the middle or highest parts. The upper stratum or surface of the earth is a whitish clay or chalk, with veins of fea shells, chiefly of those little clams called les coquilles, or interfperfed with the white earth or clay, fo tenacious and hard as to render it quite fteril; fcarcely any vegetable growth to be feen, except fhort grafs, or cruftaceous moffes; and fome places quite bare, where it is on the furface; but where it lies

lies from eighteen inches to two or three feet below, it has the virtue of fertilizing the virgin mould above, rendering it black, humid, foapy, and incredibly productive.

I observed two or three scrubby Pine trees or rather dwarf bushes, upon the highest ridge of thefe plains, which are viewed here as a curiofity. there being no Pine forefts within feveral leagues distance from the banks of this great river, but, on the contrary, feemingly an endless wilderness of Canes, and the most magnificent forests of the trees already noted, but particularly Platanus occidentalis, Liriodendron, Magnolia grandiflora, Liquidambar ftyraciflua, Juglans nigra, Juglans exaltata, Tilea, Morus rubra, Gleditfia triacanthus, Laurus Borbonia, and Laurus faffafras; this last grows here to a vast tree, forty or fifty feet ftraight trunk; its timber is found to be uleful, fawn into boards and fcantling, or hewn into pofts for building and fencing.

On the more fertile borders of the plains, adjoining the furrounding forefts, are Sideroxylon, Pyrus coronaria, and Strawberry vines (Fragaria) but no fruit on them; the inhabitants affured me they bore fruit in their feason, very large, of a fine red colour, delicious and fragrant.

Having made our tour and obfervations on the White plains, we returned to the river at the clofe of the day, and next morning fat off for Point Coupe: paffed under the high painted cliffs, and then fet our courfe acrofs the Miffiffippi, which is here near two miles over: touched at a large ifland near the middle of the river, being led there, a little out of

## NORTH AMERICA.

of our way, in purfuit of a bear croffing from the main, but he out-fwam us, reached the ifland, \. and made a fafe retreat in the forefts entangled with vines; we however purfued him on fhore, but to no purpose. After refting a while, we reembarked and continued on our voyage, coafting the East shore of the island to the upper end; here we landed again, on an extended projecting point of clean fand and pebbles, where were to be feen pieces of coal flicking in the gravel and fand, together with other fragments of the foffil kingdom, brought down by inundations and lodged there. We observed a large kind of muscle in the fand; the shell of an oval form, having horns or protuberances near half an inch in length and as thick as a crow quill, which I fuppofe ferve the purpose of grapnels to hold their ground against the violence of the current. Here were great numbers of wild fowl wading in the fhoal water that covers the fandy points, to a vaft diftance from the fhores: they were geefe, brant, gannet, and the great and beautiful whooping crane (grus alber.) Embarked again, doubled the point of the island and arrived at Point Coupe in the evening.

We made our visit to a French gentleman, an ancient man and wealthy planter, who, according to the hiftory he favoured us with of his own life and adventures, must have been very aged; his hair was of a filky white, yet his complexion was florid and conftitution athletic. He faid that foon after he came to America, with many families of his countrymen, they afcended the river to the Cliffs of the Natches, where they fat down, being entertained by the natives; and under cover of a ftrong fortrets and garrifon, eftablished a fettlement, and by cultivating the land and forming plan-

plantations, in league and friendship with the Indians, in a few years they became a populous, rich and growing colony; when through the imprudent and tyrannical conduct of the commandant towards the Natches, the ancients of the country, a very powerful and civilized nation of red men, who were fovereigns of the foil, and poffeffed the country round about them, they became tired of thefe comers, and exafperated at their cruelty and licentiourefs, at length determining to revenge themfelves of fuch inhumanity and ingratitude, fecretly confpired their destruction; and their measures were fo well concerted with other Indian tribes, that if it had not been for the treachery of one of their princeffes, with whom the commander was in favour (for by her influence her nation attempted the destruction of the fettlement, before their auxiliaries joined them, which afforded an opportunity for fome few of the fettlers to escape), they would have fully accomplished their purpose. However the fettlement was entirely broken up, most of the inhabitants being flaughtered in one night, and the few who escaped betook themselves to their canoes, defcending the river until they arrived at this place, where they effablished themfelves again; and this gentleman had only time and opportunity to take into his boat one heifer calf, which he affured us was the mother of the numerous herds he now poffeffes, confifting of many hundred head. Here is now a very respectable village, defended by a ftrong fortrefs and garrifon of Spaniards, the commander being governor of the diffrict.

The French here are able, ingenious and industrious planters: they live eafy and plentifully, and are far more regular and commendable in the enjoyenjoyment of their earnings than their neighbours the Englifh: their drefs of their own manufactures, well wrought and neatly made up, yet not extravagant or foppifh: manners and converfation eafy, moral and entertaining.

Next morning we fat off again on our return home, and called by the way at the Cliffs, which is a perpendicular bank or bluff, rifing up out of the river near one hundred feet above the prefent furface of the water, whole active current fweeps along by it. From eight or nine feet below the loamy vegetative mould at top, to within four or five feet of the water, these cliffs prefent to view strata of clay, marle and chalk, of all colours, as brown, red, yellow, white blue and purple; there are separate strata of these various colours, as well as mixed or particoloured : the lowest stratum next the water is exactly of the fame black mud or rich foil as the adjacent low Cyprefs fwamps, above and below the bluff; and here in the cliffs we fee valt ftumps of Cyprefs and other trees, which at this day grow in thefe low, wet fwamps, and which range on a level with them. Thefe ftumps are found, stand upright, and seem to be rotted off about two or three feet above the fpread of their roots; their trunks, limbs, &c. lie in all directions about them. But when these fwampy forests were growing, and by what cause they were cut off and overwhelmed by the various strata of earth, which now rife near one hundred feet above, at the brink of the cliffs, and two or three times that height but a few hundred yards back, are enquiries perhaps not eafily answered. The fwelling heights rifing gradually over and beyond this precipice are now adorned with high forests of stately Magnolia, Liquidambar, Fagus, Ff Quercus,

Quercus, Laurus, Morus, Juglans, Tilia, Halefia, Æfculus, Callicarpa, Liriodendron, &c. Arrived in the evening at the plantation below the Cliffs, and the next day got fafe back to my friend's habitation.

Obferved few vegetable productions different from what grow in Carolina and Georgia; perhaps in the fpring and early fummer feafon, here may be fome new plants, particularly in the high forefts and ridges, at fome diftance from the river: there is however growing in the rich high lands, near on the banks of the river, which I obferved in the fettlement of Baton Rouge, an arborefcent aromatic vine, which mounts to the tops ' of the higheft trees, by twifting or writhing fpirally round them; fome of these vines are as thick as a man's leg, of a foft fpungy texture, and flexible, covered with a Cinnamon coloured bark, which is highly aromatic or fpicy. The large oblong leaves fit opposite on the branches. and are of a full deep green colour; but its feafon of flowering being paft, and the feed fcattered, I am entirely ignorant to what genus it be-longs; perhaps it is a non-defcript or new genus. Here is likewife a new and beautiful fpecies of Verbena, with decumbent branches and lacerated deep green leaves; the branches terminate with corymbi of violet blue flowers: this pretty plant grows in old fields where there is a good foil.

The fevere diforder in my eyes fubverted the plan of my peregrinations, and contracted the Ipan of my pilgrimage South-Weftward. This difappointment affected me very fenfibly, but refignation and reafon refuming their empire over my my mind, I fubmitted, and determined to return to Carolina.

Receiving information that the company's fchooner was ready to fail for Mobile, I embarked on board a trading boat for Manchac, where arriving in the evening, I took leave next morning of Meffrs. Swanfon and Co. and fet off for the forks of the Amite, and next day fet fail, defcending the tardy current of the Amite. Obferving two bears croffing the river a-head, though our pieces were ready charged, and the yawl along fide to receive us, we purfued them in vain, they fwam fwiftly acrofs and efcaped in the forefts on the ifland of Orleans. The breeze dying away at evening, we came to anchor, and had variety of amutements at fifting and fowling.

Next day, November 13th, 1777, with a fleady leading breeze, entered and failed over the lake Maurepas, and through the ftreights into the Pontchartrain, and continued under fail; but at midnight, by keeping too near the West shore, we ran aground on a fand-bar, where we lay beating the hard fandy bottom until morning, and our yawl parting from us in the night, which we never recovered, we were left to the mercy of the winds and floods; but before noon the wind coming brifkly from North-Eaft, driving the fea into the lake, we got off, made fail again, and before night paffed through the Regullets, entering the ocean through the bay of Pearls, failing through the found betwixt Cat ifland and the ftrand of the continent; paffing by the beautiful bay St. Louis, into which defcend many delightful rivers, which flow from the lower or maritime fettlements of the Chactaws or Flatheads. Continuing through the found between the oyfter Ff2 banks

banks and fhoals of Ship and Horn islands, and the high and bold coast of Biloxi on the main, got through the narrow pass Aux Christians, and soon came up abreast of Isle Dauphin, betwixt whose shoals and the West Cape of Mobile Bay we got aground on some funken oyster banks; but next day a brisk Southerly wind raised the sea on the coast, which listed us off again, and setting fail, we shot through the Pass au Oleron, and entering the bay, by night came to anchor safe again at the city of Mobile.

After having made up my collections of growing roots, feeds and curious specimens, left them to the care of Meffrs. Swanfon and M'Gillavry, to be forwarded to Dr. Fothergill of London. Ŧ prepared to fet off again to Augusta in Georgia, through the Creek Nation, the only practicable way of returning by land, being fruftrated of purfuing my intended rout which I had meditated, through the territories of the Siminoles or Lower Creeks, they being a treacherous people, lying fo far from the eye and controul of the nation with whom they are confederate, that there had lately been depredations and murders committed by them at the bay of Apalache, on fome families of white people who were migrating from Georgia, with an intention of fettling on the Mobile. Having to pals the diftance of near two hundred miles to the first town of the nation, through a folitary, uninhabited wildernefs, the bloody field of Schambe, where those contending bands of American bravos, Creeks and Chactaws, often meet in dire conflict; for the better convenience and fecurity, I joined company with a caravan of traders, now about fetting off for the nation.

### NORTH AMERICA.

Obferved growing in a garden in Mobile, two large trees of the Juglans pecan, and the Diofcorea bulbifera: this laft curious plant bears a large kidney fhaped root, one, two or three at the bofom of the leaves, feveral feet from the ground, as they climb up poles or fupports fet by their roots; thefe roots when boiled or roafted are efteemed a pleafant wholefome food, and tafte like the ordinary Yam.

437

## CHAP.

# CHAP. VIII.

NOVEMBER 27th, 1777, fat off from Mobile, in a large boat with the principal trader of the company, and at evening arrived at Taenfa, where were the pack-horfemen with the merchandize, and next morning as foon as we had our horfes in readinefs, I took my laft leave of Major Farmer, and left Taenfa. Our caravan confifted of between twenty and thirty horfes, fixteen of which were loaded. two pack-horfemen, and myfelf, under the direction of Mr. Tap----y the chief trader. One of our young men was a Mustee Creek, his mother being a Chactaw flave, and his father a half breed, betwixt a Creek and a white man. I loaded one horfe with my effects, fome prefents to the Indians, to enable me to purchale a fresh horse, in case of necessity; for my old trufty flave which had ferved me faithfully almost three years, having carried me on his back at least fix thousand miles, was by this time almost worn out, and I expected every hour he would give up, especially after I found the manner of these traders' travelling. They feldom decamp until the fun is high and hot; each one having a whip made of the toughest cow-skin, they start all at once, the horfes having ranged themfelves in regular Indian file, the veteran in the van, and the younger in the rear; then the chief drives with the crack of his whip, and a whoop or fhriek, which rings through the forefts and plains, fpeaks in Indian, commanding them to proceed, which is repeated by all the company, when we ftart at once, keeping up a brifk and conftant trot, which

which is inceffantly urged and continued as long as the miferable creatures are able to move forward; and then come to camp, though frequently in the middle of the afternoon, which is the pleafanteft time of the day for travelling; and every horfe has a bell on, which being ftopped when we flart in the morning with a twift of grafs or leaves, foon fhakes out, and they are never ftopped again during the day. The conflant ringing and clattering of the bells, fmacking of the whips, whooping and too frequent curfing thefe miferable quadrupeds, caufe an inceffant uproar and confusion, inexprefibly difagreeable.

After three days travelling in this mad manner, my old fervant was on the point of giving out, and feveral of the company's horfes were tired, but were relieved of their burthens by the led horfes which attended for that purpofe. 1 was now driven to difagreeable extremities, and had no other alternative, but either to leave my horfe in the woods, pay a very extravagant hire for a doubtful paffage to the Nation, or feparate myfelf from my companions, and wait the recovery of my horfe alone: the chief gave me no other comfortable advice in this dilemina, than that, there was a company of traders on the road a-head of us from the Nation, to Mobile, who had a large gang of led horfes with them for fale, when they fhould arrive; and expected from the advice which he had received at Mobile before we fet off from thence, that this company must be very near to us, and probably would be up to-morrow, or at least in two or three days: and this man condescended fo far as to moderate a little his mode of travelling, that I might have a chance

chance of keeping up with them until the evening of next day; befides I had the comfort of obferving that the traders and pack-horfemen carried themfelves towards me with evident figns of humanity and friendfhip, often expressing fentiments of fympathy, and faying I must not be left alone to perish in the wildernefs.

Although my apprehensions on this occasion were fomewhat tumultuous, fince there was little hope, on the principle of reason, should I be left alone, of escaping cruel captivity, and perhaps being murdered by the Chastaws (for the company of traders was my only security, as the Indians never attack the traders on the road, though they be trading with nations at enmity with them) yet I had secret hopes of relief and deliverance, that cheered me, and inspired confidence and peace of mind.

Now I am come within the atmosphere of the Illicium groves, how reanimating is the fragrance! every part of this plant above ground poffeffes an aromatic fcent, but the large ftillated pericarpe is the most fragrant part of it, which continually perspires an oleagenous fweat, as warm and vivific as cloves or mace. I never faw it grow naturally further North than Lat. 33°, on the Mobile river and its branches, and but one place in East Florida near Lake George, Lat. 28°.

About the middle of the afternoon, we were joyfully furprifed at the diftant profpect of the trading company coming up, and we foon met, faluting each other feveral times with a general Indian whoop, or fhout of friendship; then each company came to camp within a few paces of each

### NORTH AMERICA.

each other; and before night I ftruck up a bargain with them for a handfome ftrong young horfe, which coft me about ten pounds fterling. I was now conftrained to leave my old flave behind, to feed in rich cane paftures, where he was to remain and recruit until the return of his new mafter from Mobile; from whom I extorted a promife to use him gently, and if possible, not to make a pack-horfe of him.

Next morning we decamped, proceeding again on my travels, now alert and cheerful. Croffed a brifk rivulet ripling over a gravelly bed, and winding through aromatic groves of the Illicium Floridanum, then gently defcended to the high forefts, leaving Deadman's creek, for at this creek a white man was found dead, fuppofed to have been murdered, from which circumftance it has its namé.

A few days before we arrived at the Nation, we met a company of emigrants from Georgia; a man, his wife, a young woman, feveral young children, and three flout young men, with about a dozen horfes loaded with their property. They informed us their defign was to fettle on the Alabama, a few miles above the confluence of the Tombigbe.

Being now near the Nation, the chief trader with another of our company fat off a-head for his town, to give notice to the Nation, as he faid, of his approach with the merchandize, each of them taking the beft horfe they could pick out of the gang, leaving the goods to the conduct and care of the young Mustee and myself. Early in the evening we came to the banks of a large deep creek, a confiderable branch of the Alabama:

bama: the waters ran furioully, being overcharged with the floods of rain which had fallen the day before. We difcovered immediately that there was no poffibility of croffing it by fording; its depth and rapidity would have fwept our horfes, loads and all, inftantly from our fight : my companion, after confideration, faid we must make a raft to ferry over our goods, which we immediately fet about, after unloading our horfes and turning them out to range. I undertook to collect dry canes, and my companion, dry timber or logs and vines to bind them together : having gathered the neceffary materials, and laid them in order on the brinks of the river, ready to work upon, we betook ourfelves to repole, and early next morning fat about building our raft. This was a novel scene to me, and I could not, until finished and put to practice, well comprehend how it could poffibly answer the effect defired. In the first place we laid, parallel to each other, dry; found trunks of trees, about nine feet in length, and eight or nine inches diameter; which binding fast together with grape vines and withs, until we had formed this first floor, about twelve or fourteen feet in length, we then bound the dry canes in bundles, each near as thick as a man's body, with which we formed the upper ftratum, laying them clofe by the fide of each other and binding them fast; after this manner our raft was constructed. Then having two strong grape vines, each long enough to cross the river, we faltened one to each end of the raft; which now being completed, and loading on as much as it would fafely carry, the Indian took the end of one of the vines in his mouth, plunged into the river and fwam over with it, and the vine fixed to the other end was committed to

my

my charge, to fleady the raft and haul it back again after being unloaded. As foon as he had fafe landed and hauled taught his vine, I pushed off the raft, which he drew over as quick as polfible, I fleadying it with my vine: in this manner, though with inexpreffible danger of lofing our effects, we ferried all fafe over. The laft load, with other articles, contained my property, with all my clothes, which I ftripped off, except my breeches, for they contained matters of more value and confequence than all the reft of my property put together; befides I did not choofe to expofe myfelf entirely naked to the alligators and ferpents in croffing the flood. Now feeing all the goods fafe over, and the horfes at a landing place on the banks of the river about fifty yards above, I drove them all in together, when, feeing them fafe landed, I plunged in after them, and being a tolerable fwimmer, foon reached the oppofite fhore. But my difficulties at this place were not yet at an end, for our horfes all landed just below the mouth of a confiderable branch of this river, of fifteen or twenty feet width, and its perpendicular banks almost as many feet in height above its swift waters, over which we were obliged to carry every article of our effects, and this by no other bridge than a fapling felled acrofs it, which is called a raccoon bridge; and over this my Indian friend would trip as quick and light as that quadruped, with one hundred weight of leather on his back, when I was fcarcely able to fhuffle myfelf along over it aftride. At last having re-packed and fat off again, without any material occurrence intervening, in the evening we arrived at the banks of the great Tallapoofe river, and came to camp under shelter of some Indian cabins, in expansive fields.

fields, clofe to the river bank, opposite the town of Savannuca. Late in the evening a young white man, in great hafte and feeming confusion, joined our camp, who immediately related, that being on his journey from Penfacola, it happened that the very night after we had passed the company of emigrants, he met them and joined their camp in the evening; when, just at dark, the Chactaws furrounded them, plundered their camp, and carried all the people off captive, except himself, he having the good fortune to escape with his horfe, though closely purfued.

Next morning very early, though very cold and the furface of the earth as hoary as if covered with a fall of fnow, the trader ftanding on the opposite fhore entirely naked, except a breech-clout, and encircled by a company of red men in the like habit, hailed us, and prefently, with canoes, brought us all over with the merchandize, and conducted us fafe to the town of Mucclaffe, a mile or two diftant.

The next day was a day of reft and audience: the following was devoted to feafting, and the evening concluded in celebrating the nuptials of the young Mustee with a Creek girl of Mucclasse, daughter of the chief and fifter to our trader's wife. The trader's house and stores formed a complete fquare, after the mode of the habitations of the Muscogulges, that is, four oblong buildings of equal dimensions, two oppolite to each other, encompalling an area of about a quarter of an acre; on one fide of this a fence enclosed a yard of near an acre of ground, at one of the farther corners of which a booth or pavilion was formed of green boughs, having two Laurel trees planted in front (Magnolia grandi-

grandiflora). This was the fecret nuptial chamber. Dancing, mufic and feafting continued the forepart of the night, and towards morning the happy couple privately withdrew, and continued alone all the next day, no one prefuming to approach the facred, mysterious thalame.

The trader obliged me with his company on a vifit to the Alabama, an Indian town at the confluence of the two fine rivers, the Tallapoofe and Coofau, which here refign their names to the great Alabama, where are to be feen traces of the ancient French fortreis, Thouloufe; here are yet lying, half buried in the earth, a few pieces of ordnance, four and fix pounders. I observed, in a very thriving condition, two or three very large apple trees, planted here by the French. This is, perhaps, one of the most eligible fituations for a city in the world; a level plain between the conflux of two majeftic rivers, which are exactly of equal magnitude in appearance, each navigable for veffels and periauguas at least five hundred miles above it, and fpreading their numerous branches over the most fertile and delightful regions, many hundred miles before we reach their fources in the Apalachean mountains.

Stayed all night at Alabama, where we had a grand entertainment at the public fquare, with mufic and dancing, and returned next day to Mucclaffe; where being informed of a company of traders about fetting off from Tuckabatche for Augusta, I made a visit to that town to know the truth of it, but on my arrival there they were gone; but being informed of another caravan who were to ftart from the Ottaffe town in two

or three weeks time, I returned to Mucclaffe in order to prepare for my departure.

On my arrival, I was not a little furprifed at a tragical revolution in the family of my friend the trader, his flores flut up, and guarded by a party of Indians : in a few minutes however, the whole affair was related to me. It appeared that this fon of Adonis, had been detected in an amorous intrigue, with the wife of a young chief, the day after his arrival: the chief was out on a hunt. but arrived next day; and upon information of the affair, the fact being confirmed, he with his friends and kindred refolved to exact legal fatisfaction, which in this cafe is cutting off both ears of the delinquent, close to the head, which is called cropping. This being determined upon, he took the most fecret and effectual methods to effect his purpofe. About a dozen young Indian fellows, conducted by their chief (the injured hufband), having provided and armed themfelves with knotty cudgels of green Hiccory, which they concealed under their mantles, in the dufk of the evening paid a pretended friendly vifit to the trader at his own houfe, when the chief feigning a private matter of bufinefs, took him afide in the yard ; then whiftling through his fingers (the fignal preconcerted) he was inftantly furrounded, knocked down, and then stripped to his skin, and beaten with their knotty bludgeons; however he had the fubtilty to feign himfelf fpeechlefs before they really killed him, which he fuppofed was their intention: when he had now lain for dead, the executioner drew out his knife with an intention of taking off his ears: this fmall refpite gave him time to reflect a little; when he inftantly fprang up, ran

ran off, leaped the fence, and had the good fortune to get into a dark fwamp, overgrown with vines and thickets, where he miraculoufly eluded the earnest refearches of his enemies, and finally made a fafe retreat to the house of his father-in-law, the chief of the town, throwing himfelf under his protection, who gave his word that he would do him all the favour that lay in his power. This account I had from his own mouth, for hearing of my return, the next morning after my arrival, he fent a trufty meffenger, by whom I found means of access to him. He farther informed me, that there had been a council of the chiefs of the town convened, to deliberate on the affair, and their final determination was that he must lofe his ears, or forfeit all his goods, which amounted to upwards of one thousand pounds sterling, and even that forfeiture would not fave his ears, unlefs Mr. Golphin interpofed in his behalf; and after all, the injured Indian declares that he will have his life. He entreated me with tears to make what fpeed I could to Silver Bluff, reprefent his dangerous fituation to Mr. Golphin, and folicit that gentleman's most fpeedy and effectual interference; which I affured him I would undertake.

Now having all things prepared for my departure, early in the morning, after taking leave of my diftreffed friend the trader of Mucclaffe, I fat off; paffed through continued plantations and Indian towns on my way up the Tallapoofe river, being every where treated by the inhabitants with marks of friendship, even as though I had been their countryman and relation. Called by the way at the beautiful town of Coolome, where where I tarried fome time with Mr. Germany the chief trader of the town, an elderly gentleman, but active, cheerful and very agreeable, who received and treated me with the utmost civility and friendship: his wife is a Creek woman, of a very amiable and worthy character and disposition, industrious, prudent and affectionate; and by her he had feveral children, whom he is defirous to fend to Savanna or Charleston, for their education, but cannot prevail on his wife to confent to it: this affair affects him very fensibly, for he has accumulated a pretty fortune by his industry and commendable conduct.

Leaving Coolome, I re-croffed the river at Tuccabache, an ancient and large town; thence continued up the river, and at evening arrived at Attaffe, where I continued near a week, waiting the preparations of the traders, with whom I was to join in company to Augusta.

The next day after my arrival, I was introduced to the ancient chiefs, at the public fquare or areopagus; and in the evening, in company with the traders, who are numerous in this town, repaired to the great rotunda, where were affembled the greatest number of ancient venerable chiefs and warriors that I had ever beheld : we fpent the evening and greater part of the night together, in drinking Caffine and Imoking Tobacco. The great council houfe or rotunda is appropriated to much the fame purpofe as the public fquare, but more private, and feems particularly dedicated to political affairs; women and youth are never admitted; and I suppose it is death for a female to presume to enter the door, or approach within its pale. It is a vaft conical building or circular dome, capable of accommoaccommodating many hundred people; conftructed and furnished within, exactly in the fame manner as those of the Cherokees already defcribed, but much larger than any I had feen of them : there are people appointed to take care of it, to have it daily fwept clean, and to provide canes for fuel, or to give light.

As their virgils and manner of conducting their vefpers and mystical fire in this rotunda, are extremely fingular, and altogether different from the cultoms and ulages of any other people, I shall proceed to defcribe them. In the first place, the governor or officer who has the management of this bufinels, with his fervants attending, orders the black drink to be brewed, which is a decoction or infusion of the leaves and tender fhoots of the Caffine: this is done under an open fhed or pavillion, at twenty or thirty yards dif-tance, directly opposite the door of the councilhouse. Next he orders bundles of dry canes to be brought in: thefe are previoufly fplit and broken in pieces to about the length of two feet, and then placed obliquely croffways upon one another on the floor, forming a spiral circle round about the great centre pillar, rising to a foot or eighteen inches in height from the ground; and this circle fpreading as it proceeds round and round, often repeated from right to left, every revolution encreafes its diameter, and at length extends to the diftance of ten or twelve feet from the centre, more or lefs, according to the length of time the affembly or meeting is to continue. By the time these preparations are accomplished, it is night, and the assembly have taken their feats in order. The exterior extremity or outer end of the fpiral circle takes fire and.

and immediately rifes into a bright flame (but how this is effected I did not plainly apprehend; I faw no perfon fet fire to it; there might have been fire left on the earth, however I neither faw nor fmelt fire or fmoke until the blaze inftantly afcended upwards), which gradually and flowly creeps round the centre pillar, with the courfe of the fun, feeding on the dry canes, and affords a cheerful, gentle and fufficient light until the circle is confumed, when the council breaks up. Soon after this illumination takes place, the aged. chiefs and warriors are feated on their cabins or fophas on the fide of the house opposite the door, in three claffes or ranks, rifing a little, one above or behind the other; and the white people and red people of confederate towns in the like order on the left hand; a transverse range of pillars, fupporting a thin clay wall about breaft high, feparating them: the king's cabinor feat is in front; the next to the back of it the head warriors; and the third or laft accommodates the young warriors, &c. The great war chief's feat or place is on the fame cabin with, and immediately to the left hand of the king. and next to the white people; and to the right hand of the mico or king the most venerable head-men and warriors are feated. The affembly being now feated in order, and the houfe illuminated, two middle aged men, who perform the office of flaves or fervants, pro tempore, come in together at the door, each having very large conch shells full of black drink, and advance with flow, uniform and fteady fteps, their eyes or countenances lifted up, finging very low but fweetly; they come within fix or eight paces of the king's and white people's cabins, when they ftop together, and each refts his shell on a tripos

450

or

or little table, but prefently takes it up again, and, bowing very low, advances obfequioufly, croffing or interfecting each other about midway: he who refted his fhell before the white people now stands before the king, and the other who ftopped before the king ftands before the white people; when each prefents his fhell, one to the king and the other to the chief of the white people, and as foon as he raifes it to his mouth, the flave utters or fings two notes, each of which continues as long as he has breath; and as long as thefe notes continue, fo long must the perfon drink or at least keep the shell to his mouth. These two long notes are very folemn, and at once strike the imagination with a religious awe or homage to the Supreme, founding fomewhat like a-hoo-ojah and a-lu-yah. After this manner the whole affembly are treated, as long as the drink and light continue to hold out; and as foon as the drinking begins, tobacco and pipes are brought. The fkin of a wild cat or young tyger stuffed with tobacco is brought, and laid at the king's feet, with the great or royal pipe beautifully adorned; the fkin is ufually of the animals of the king's family or tribe, as the wild-cat, otter, bear, rattle-fnake, &c. A fkin of tobacco is likewife brought and caft at the feet of the white chief of the town, and from him it paffes from one to another to fill their pipes from, though each perfon has befides his own peculiar skin of tobacco. The king or chief fmokes first in the great pipe a few whiffs, blowing it off ceremoniously, first towards the fun, or as it is generally supposed to the Great Spirit, for it is puffed upwards, next towards the four cardinal points, then towards the white people in the house; then the great pipe is taken from the hand

45I

Gg2

hand of the mico by a flave, and prefented to the chief white man, and then to the great war chief, whence it circulates through the rank of head men and warriors, then returns to the king. After this each one fills his pipe from his own or his neighbour's fkin.

The great or public fquare generally stands alone, in the centre and highest part of the town: it confifts of four-fquare or cubical buildings, or houfes of one ftory, uniform, and of the fame dimensions, fo fituated as to form an exact tetragon, encompaffing an area of half an acre of ground, more or lefs, according to the ftrength or largeness of the town, or will of the inhabitants: there is a paffage or avenue at each corner. of equal width: each building is constructed of a wooden frame fixed ftrongly in the earth, the walls filled in, and neatly plaiftered with claymortar; clofe on three fides, that is the back and two ends, except within about two feet of the wall plate or eves, which is left open for the purpole of a window and to admit a free passage of the air; the front or fide next to the area is quite. open like a piazza. One of these buildings is properly the council house, where the mico, chiefs, and warriors, with the citizens who have bufinefs, or choofe to repair thither, affemble every day in council, to hear, decide and rectifyall grievances, complaints and contentions, arifing betwixt the citizens; give audience to am-baffadors, and ftrangers; hear news and talks from confederate towns, allies or diftant nations; confult about the particular affairs of the town, as erecting habitations for new citizens, or eftablifhing young families, concerning agriculture, &c. This building is somewhat different from the

the other three: it is closely that up on three fides, that is, the back and two ends, and befides, a partition wall longitudinally from end to end divides it into two apartments, the back part totally dark, only three fmall arched aper-tures or holes opening into it from the front apartment or piazza, and little larger than just to admit a man to crawl in upon his hands and knees. This fecluded place appears to me to be defigned as a fanctuary \* dedicated to religion, or rather prieft craft; for here are deposited all the facred things, as the phyfic pot, rattles, chaplets of deer's hoofs and other apparatus of conjuration; and likewife the calumet or great pipe of peace, the imperial ftandard, or eagle's tail, which is made of the feathers of the white eagle's tail + curioufly formed and difplayed like an open fan on a fceptre or ftaff, as white and clean as poffible when difplayed for peace, but when for war, the feathers are painted or tinged with vermillion. The piazza or front of this building, is equally divided into three apartments, by two transverse walls or partitions, about breast high, each having three orders or ranges of feats or cabins flepping one above and behind the other, which accommodate the fenate and audience, in the like order as observed in the rotunda. The other three buildings which compose the fquare, are alike furnished with three ranges of cabins or fophas, and ferve for a banqueting-houfe, to fhelter and accommodate the audience and fpectators at all times, particularly at feafts or public entertainments, where all classes of citizens refort

\* Sanctorium or facred temple; and it is fail to be death for any perfon but the mico, war-chief and high prieft to enter in, and none are admitted but by permiffion of the priefts, who guard it day and night. † Vultur facra.

day

day and night in the fummer or moderate feafon; the children and females however are feldom or never feen in the public fquare.

The pillars and walls of the houfes of the fquare are decorated with various paintings and fculptures; which I suppose to be hieroglyphic, and as an hiftoric legendary of political and facerdotal affairs: but they are extremely picturesque or caricature, as men in variety of attitudes, fome ludicrous enough, others having the head of fome kind of animal, as those of a duck, turkey, bear, fox, wolf, buck, &c. and again those kind of creatures are represented having the human head. These defigns are not ill executed; the outlines bold, free and well proportioned. The pillars fupporting the front or piazza of the council-houfe of the fquare, are ingenioully formed in the likeness of yast speckled ferpents, afcending upwards; the Ottafies being of the fnake family or tribe. At this time the town was fafting, taking medicine, and I think I may fay praying, to avert a grievous calamity of ficknefs, which had lately afflicted them, and laid in the grave abundance of their citizens. They faft . feven or eight days, during which time they eat or drink nothing but a meagre gruel, made of a little corn-flour and water; taking at the fame time by way of medicine or phyfic, a ftrong decoction of the roots of the Iris verficolor, which is a powerful carthartic : they hold this root in high estimation, every town cultivates a little plantation of it, having a large artificial pond, just without the town, planted and almost overgrown with it, where they ufually dig clay for pottery, and mortar and plafter for their buildings, and I obferved where they had lately been digging up this rcot.

In the midft of a large oblong fquare adjoining this town (which was furrounded with a low bank or terrace) is flanding a high pillar, round like a pin or needle; it is about forty feet in height, and between two and three feet in diameter at the earth, gradually tapering upwards to a point; it is one piece of pine wood, and arifes from the centre of a low, circular, artificial hill, but it leans a little to one fide. 1 inquired of the Indians and traders what it was defigned for, who answered they knew not: the Indians faid that their anceftors found it in the fame fituation, when they first arrived and possefied the country, adding, that the red men or Indians, then the poffetfors, whom they vanguished, were as ignorant as themfelves concerning it, faying that their anceftors likewife found it ftanding fo. This monument, fimple as it is, may be worthy the observations of a traveller, fince it naturally excites at least the following queries: for what purpofe was it defigned? its great antiquity and incorruptibility-what method or machines they employed to bring it to the fpot, and how they raifed it erect? There is no tree or species of the pine, whole wood, i. e. fo large a portion of the trunk, is fuppofed to be incorruptible, expofed in the open air to all weathers, but the longleaved Pine (Pin palustris), and there is none growing within twelve or fifteen miles of this place, that tree being naturally produced only on the high, dry, barren ridges, where there is a fandy foil and graffy wet favannas. A great number of men uniting their ftrength, probably carried it to the place on handspikes, or some such contrivance.

On the Sabbath day before I fet off from this place, I could not help obferving the folemnity

of

of the town, the filence and the retiredness of the red inhabitants; but a very few of them were to be feen, the doors of their dwellings fhut, and if a child chanced to ftray out, it was quickly drawn in doors again. I asked the meaning of this, and was immediately answered, that it being the white people's beloved day or Sabbath, the Indians kept it religiously facred to the Great spirit.

Last night was clear and cold, wind North West, and this morning, January 2d, 1788, the face of the earth was perfectly white with a beautiful sparkling frost. Sat off for Augusta with a company of traders, four men with about thirty horfes, twenty of which were loaded with leather and furs, each pack or load fuppofed to weigh one hundred and fifty pounds upon an average. In three days we arrived at the Apalachucla or Chata Uche river; croffed at the point towns Chehaw and Uffeta: these towns almost join each other, yet speak two languages, as radically different perhaps as the Mufcogulge's and Chinefe. After leaving the river we met with nothing material, or worth particular observation, until our arrival at Oakmulge, towards evening, where we encamped in expansive ancient Indian fields, in view of the foaming flood of the river, now raging over its banks. Here were two companies of traders from Augusta, bound to the Nation, confifting of fifteen or twenty men, with feventy or eighty horfes, most of which had their loads of merchandize : they croffed the river this morning and loft fix horfes in the attempt; they were drowned, being entangled in the vines under water at landing. But the river now falling again, we were in hopes that by next morning the

the waters would be again confined within the banks. We immediately fat about rigging our portable leather boat, about eight feet long, which was of thick foal leather, folded up and carried on the top of a pack of deer-fkins. The people foon got her rigged, which was effected after the following manner. We, in the first place, cut down a White-Oak fapling, and by notching this at each end, bent it up, which formed the keel, ftem and ftern post of one piece; this was placed in the bottom of the boat, and pretty ftrong hoop-poles being fixed in the bottom across the keel, turning up their ends, expanded the hull of the boat, which being fastened by thongs to two other poles bent round, the outfide of the rim formed the gunwhales : thus in an hour's time our bark was rigged, to which afterwards we added two little oars or fculls. Our boat being now in readinefs, and our horfes turned out to pasture, each one rerired to repose, or to fuch exercife as most effectually contributed to divert the mind. I was at this time rather dejected, and fought comfort in retirement, turning my course to the expansive fields, fragrant groves and fublime forefts. Returned to camp by dufk, where I found my companions cheerful and thoughtlefs rather to an extreme. It was a calm ftill evening and warm; the wood-cock (fcolopax) chirruping high up in the air, gently defcends by a fpiral circular tract, and alights on the humid plain: this bird appears in Pennfylvania early in the fpring, when the Elm and Maple begin to flower; and here the fcarlet Maple, Elm and Elder began to fhow their flowers; the yellow Jafmin was just ready to open its fragrant golden bloffoms, and the gay Azalea alfo preparing to expand its beauties.

The

The morning cool and pleafant: after reconnoitering the fhores of the rivers, and confulting with our brethren in diftrefs, who had not yet decamped, refolving to flay and lend their affiftance in paffing over this rapid gulph, we were encouraged to proceed; and launching our bark into the raging flood, after many fuccefsful trips ferried over all the goods, then drove in our horfes altogether, and had the pleafure of feeing them all fafely landed on the oppofite fhore; and laftly I embarked with three of our people, and feveral packs of leather; we then put off from fhore, bidding adieu to our generous friends left behind. who re-echoed our fhouts upon our fafe landing. We proceeded again, croffed the Oconne in the fame manner, and with the like fuccefs, and came to camp in the fertile fields, on the banks of that beautiful river; and proceeding thence next day, in the evening came to camp on the waters of great The following day, after croffing feveral Ogeche. of its confiderable branches, came to camp; and next day croffed the main branch of that famous river, which being wide and very rapid proved difficult and dangerous fording; yet we croffed without any lofs, but fome of our pack-horfes were badly bruifed, being fwept off their feet and dashed against the rocks, my horse too being carried away with the current, and plunging off funken shelving rocks into deep holes, I got very wet, but I kept my feat and landed fafe : however I fuffered much, it being a cold freezing day. We came to camp early, and raifing great fires with Pine knots and other wood, we dried ourfelves and kept warm during the long night, and after two days more hard travelling we arrived at Augusta.

458

Being

Being under a neceffity of making two or three days flay here, in order to refit myfelf, for by this time my flock of cloaths was entirely worn out, I took this opportunity of vifiting my friend doctor Wells at his plantations near the city. And now being again new clothed and furnifhed with a tolerable Indian poney, I took leave of my hoft and prepared to depart for Savanna.

Soon after I left Augusta, proceeding for Savanna, the capital, a gentleman overtook me on the road, who was a native of Ireland, and had lately arrived in this part of America with a view of fettling a plantation in Georgia, particularly for the culture of those very useful fruits and vegetables that are cultivated up the Mediterranean, and which fo largely contribute towards fupporting that lucrative branch of commerce, the Le-vant trade, viz. Vitis vinifera, for wine, Vitis Corinthiaca, for Currants, Vitis Allobrogica, for Raifins, Olives, Figs, Morus, for feeding filk-worms, Amygdalus communis, Pistachia, Capparis, Citrus aurantium, Citrus limon, Citrus verrucofa, the great fweet fcented Citron, &c. He was very ingenious, defirous of information, and as liberal and free of communicating his own acquifitions and discoveries in useful science, and confequently a very agreeable companion. On our journey down we stopped a while to rest and refresh ourselves at the Great Springs, near the road, on our left hand, about midway between Augusta and Savanna. This amazing fountain of transparent cool water, breaks fuddenly out of the earth, at the bafis of a moderately elevated hill or bank, forming at once a bafon near twenty yards over, afcending through a horizontal bed of foft rocks, of a heterogeneous composition, chiefly

chiefly a testaceous concretion of broken, entire and pulverifed fea fhells, fand, &c. conflituting a coarfe kind of lime-ftone. The ebullition is copious, active and continual, over the ragged apertures in the rocks, which lie feven or eight feet below, fwelling the furface confiderably immediately above it. The waters defcend fwiftly from the fountain, forming at once a large brook, fix or eight yards over, and five or fix feet deep. There are multitudes of fish in the fountain, of various tribes, chiefly the feveral fpecies of bream, trout, cat-fifh and garr: it was amufing to behold the fifh continually afcending and defcend. ing through the rocky apertures. Observed that we croffed no stream or brook of water within twelve or fifteen miles of this fountain, but had in view vaft favannas, fwamps and Cane meadows, at no great diffance from our road, on our right hand, which we may prefume were the refources or refervoirs which contributed to the fupplies of this delightful grotto. Here were growing on the afcents from the fountain, Magnolia grandiflora, Laurus Borbonia, Quercus sempervirens, Callicarpa; at a little diftance, a grove of the Caffine; and in an old field, just by, are to be feen fome fmall Indian mounts. We travelled feveral miles over ridges of low fwelling hills, whofe furfaces were covered with particoloured pebbles, ftreaked and clouded with red, white, brown and yellow: they were mostly broken or shivered to pieces, I believe by the ancients in forming arrow heads, darts, knives, &c. for I observed frequently some of these misfhapen implements amongst them, fome broken and others fpoiled in the making. These stones feemed to be a fpecies of jafper or agate. On

#### NORTH AMERICA.

161

On my way down I also called at Silver Bluff, and waited on the honourable G. Golphin, Efq. to acknowledge my obligations to him, and likewife to fulfil my engagements on the part of Mr. T---y, trader of Mucclaffe. Mr. Golphin affured me that he was in a difagreeable predicament, and that he feared the worft, but faid he would do all in his power to fave him.

After five days pleafant travelling we arrived at Savanna in good health.

Lift of the towns and tribes in league, and which conftitute the powerful confederacy or empire of the Creeks or Mufcogulges.

-----Capon. Traders name. ----St. Mark's. Traders name. ----Forks. Traders name.

With many others of lefs note.

The Siminoles fpeak both the Muscogulge and Stincard tongues.

In all fifty-five towns, befides many villages not enumerated; and reckoning two hundred inhabitants to each town on an average, which

15

is a moderate computation, would give eleven thousand inhabitants.

It appears to me pretty clearly, from divers circumstances, that this powerful empire or confederacy of the Creeks or Muscogulges, arole from, and established itself upon, the ruins of that of the Natches, agreeably to monfieur Duprat. According to the Mufcogulges account of themfelves, they arrived from the South-Weft, bevond the Miffiffippi, fome time before the Englifh fettled the colony of Carolina, and built Charlefton; and their flory concerning their country and people, from whence they fprang, the caufe of leaving their native land, the progress of their migration, &c. is very fimilar to that celebrated historian's account of the Natches. They might have been included as allies and confederates in that vast and powerful empire of red men. The Mufcogulges gradually pushing and extending their fettlements on their North-East border, until the diffolution of the Natches empire; being then the most numerous, warlike and powerful tribe, they began to fubjugate the various tribes or bands which formerly conftituted the Natches, and uniting them with themselves, formed a new confederacy under the name of the Mufcogulges.

The Muscogulge tongue is now the national or fovereign language: those of the Chicafaws, Chactaws, and even the remains of the Natches, if we are to credit the Creeks and traders, being dialects of the Muscogulge: and probably, when the Natches were fovereigns, they called their own the national tongue, and the Creeks, Chicafaws, &c. only dialects of theirs. It is uncertain which is really them other tongue.

As

464

As for those numerous remnant bands or tribes. included at this day within the Mulcogulge confederacy, who generally fpeak the Stincard language, (which is radically different from the Mufcogulge) they are, beyond a doubt, the fhattered remains of the various nations who inhabited the lower or maritime parts of Carolina and Florida, from Cape Fear, West to the Missifippi. The language of the Uches and Savannucas is a third radically different from the Muscogulge and Stincard, and feems to be a more Northern tongue; I suppose a language that prevailed amongst the numerous tribes who formerly poffeffed and inhabited the maritime parts of Maryland and Virginia. I was told by any old trader that the Savannucas and Shawanefe speak the fame language, or very near alike.

#### NORTH AMERICA.

## CHAP. IX.

AFTER my return from the Creek nation, I employed myfelf during the fpring and fore part of fummer, in revisiting the feveral districts in Georgia and the East borders of Florida, where I had noted the most curious subjects; collecting them together, and fhipping them off to England. In the courfe of these excursions and refearches, I had the opportunity of obferving the new flowering fhrub, refembling the Gordonia\*, in perfect bloom as well as bearing ripe fruit. It is a flowering tree, of the first order for beauty and fragrance of bloffoms: the tree grows fifteen or twenty feet high, branching alternately; the leaves are oblong, broadest towards their extremities, and terminate with an acute point, which is generally a little reflexed; they are lightly ferrated, attenuate downwards, and feffile, or have very fhort petioles; they are placed in alternate order, and towards the extremities of the twigs are crouded together, but stand more fparfedly below; the flowers are very large, expand themfelves perfectly, are of a fnow white colour, and ornamented with a crown or taffel of gold coloured refulgent staminæ in their centre, the inferior petal or fegment of the corolla is hollow, formed like a cap or helmet, and entirely includes the other four, until the moment of expansion; its exterior furface is covered with a fhort filky hair; the borders of the petals are crifped or plicated:

\* On first observing the fructification and habit of this tree, I was inclined to believe it a species of Gordonia; but asterwards, upon stricter examination, and comparing its flowers and fruit with those of the Gordonia lasianthus, I prefently found striking characteristics abundantly fufficient to separate it from that genus, and to establish it the head of a new tribe, which we have honoured with the name of the illustricus Dr. Benjamin Franklin.

Franklinea Alatamaha.

Ηh

thefe

thefe large, white flowers ftand fingle and feffile in the bofom of the leaves, and being near together towards the extremities of the twigs, and ufually many expanded at the fame time, make a gay appearance: the fruit is a large, round, dry, woody apple or pericarp, opening at each end oppofitely by five alternate fiffures, containing ten cells, each replete with dry woody cuneiform feed. This very curious tree was first taken notice of about ten or twelve years ago, at this place, when I attended my father (John Bartram) on a botanical excursion; but, it being then late in the autumn, we could form no opinion to what clafs or tribe it belonged.

We never faw it grow in any other place, nor have I ever fince feen it growing wild, in all my travels, from Pennfylvania to Point Coupè, on the banks of the Miffiffippi, which muft be allowed a very fingular and unaccountable circumftance; at this place there are two or three acres of ground where it grows plentifully.

The other new, fingular and beautiful fhrub\*, now here in full bloom, I never faw grow but at two other places in all my travels, and there very fparingly, except in East Florida, in the neighbourhood of the fea-coast.

\* I gave it the name of Bignonia bracteate, extempore.

## NORTH AMERICA.

# СНАР. Х.

HAVING now completed my collections in Georgia. I took leave of these Southern regions, proceeding on my return to Charleston. Left Savanna in the evening, in confequence of a preffing invitation from the honourable Jonathan Bryan, Efq. who was returning from the capital, to his villa, about eight miles up Savanna river; a very delightful fituation, where are fpacious gardens, furnished with a variety of fruit trees and flowering fhrubs. Obferved in a low wet place at the corner of the garden, the Ado (Arum esculentum); this plant is much cultivated in the maritime parts of Georgia and Florida, for the fake of its large Turnip-like root, which when boiled or roafted, is excellent food, and taftes like the Yam; the leaves of this magnificent plant are very large, and of a beautiful green colour, the fpatha large and circulated, the fpadix terminates with a very long fubulated tongue, naked and perfectly white : perhaps this may be the Arum Colocafia. They have likewife another fpecies of the efculent Arum, called Tannier, which is a large and beautiful plant, and much cultivated and effeemed for food, particularly by the Negroes.

At night, foon after our arrival, feveral of his fervants came home with horfe loads of wild pigeons (Columba migratoria), which it feems they had collected in a fhort fpace of time at a neighbouring Bay fwamp: they take them by torch light: the birds have particular roofting places, where they affociate in incredible multitudes at evening, on low trees and bufhes, in hommocks or higher knolls in the interior parts of vaft Hh 2 fwamps.

fwamps. Many people go out together on this kind of fport, when dark; fome take with them little fascines of fat Pine splinters for torches: others facks or bags; and others furnish themselves with poles or flaves: thus accoutered and prepared, they approach the roofts; the fudden blaze of light confounds, blinds and affrights the birds, whereby multitudes drop off the limbs to the ground, and others are beaten off with the flaves, being by the fudden confternation, entirely helplefs, and eafily taken and put into the facks. It is chiefly the fweet fmall acorns of the Quercus phillos, Quercus aquatica, Quercus fempervirens, Quercus flammula, and others, which induce these birds to migrate in the autumn to those Southern regions; where they fpend their days agreeably, and feaft luxurioufly, during the rigour of the colds in the North, whither they return at the approach of fummer to breed.

Sat off next day, and croffed the river at Zubley's ferry, about fifty miles above Savanna, and in three days after arrived at Charleston.

Obferved, by the way near Jackfonfburg, Ponpon, After fruticofus, growing plentifully in good moift ground, ufually by the banks of canals. It is a most charming autumnal flowering flrub; it will rife to the height of eight or ten feet, when fupported by neighbouring trees.

After a few days refidence in Charlefton, I fat off on my return to my native land; croffed Cowper river, about nine miles above the city, where the water was a mile wide, and the ferry-houfe being on the opposite fhore, I hoifted my travelling blanket on a pole for a fignal, which being white, the people foon came to me and carried me

me fafe over. In three days more eafy travelling, I croffed Winyaw bay, just below George town; and in two days more, got to the Welt end of Long bay, where I lodged at a large Indigo plantation. Sat off early next morning, and after croffing over the fand ridges, which afford little elfe but Quercus pumila, Myrica cerifera, Caffine, Sideroxylon and Andromeda entangled with various fpecies of Smilax, got on the bay, which is a hard fand beach, exposed for the diftance of fifteen miles to the continual lash of the Atlantic ocean. At about low water mark, are cliffs of rocks of the helmintholitus, being a very firm concrete or petrifaction, confifting of various kinds of feashells, fine fand and pulverized shells: there is a reef of thefe rocks, thirty or forty yards farther out than low water mark, which lift their rugged backs above water, and brave the continual ftrokes of the waves, which, however, affifted by the conftant friction of the fands, make continual inroads upon them, and bore them into holes and cavities, when tempestuous seas rend them to pieces, fcattering the fragments over the fandy fhore. It is pleafant riding on this clean hard fand, paved with shells of various colours.

Obferved a number of perfons coming up a head, whom I foon perceived to be a party of Negroes. I had every reafon to dread the confe quence; for this being a defolate place, I was by this time feveral miles from any houfe or plantation, and had reafon to apprehend this to be a predatory band of Negroes; people being frequently attacked, robbed, and fometimes murdered by' them at this place. I was unarmed, alone, and my horfe tired; thus fituated every way in their power, I had no alternative but to be

be refigned and prepare to meet them. As foon as I faw them diffinctly a mile or two off, I immediately alighted to reft, and give breath to my horfe, intending to attempt my fafety by flight, if upon near approach they fhould betray hoftile defigns. Thus prepared, when we drew near to each other, I mounted and rode brickly up; and though armed with clubs, axes and hoes, they opened to right and left, and let me pass peaceably. Their chief informed me whom they belonged to, and faid they were going to man a new quarter at the Weft end of the bay; I however kept a fharp eye about me, apprehending that this might poffibly have been an advanced divifion, and their intentions were to ambufcade and furround me; but they kept on quietly, and I was no more alarmed by them. After noon, I croffed the fwash at the east end of the bay, and in the evening got to good quarters. Next morning early I fat off again, and foon croffed Little River at the boundary; which is on the line that feparates North and South Carolina: in an old field, on the banks of this river, a little diftance from the public house, stands a fingle tree of the Magnolia grandiflora, which is faid to be the most northern settlement of that tree. Passed this day over expansive favannas, charmingly decorated with late autumnal flowers, as Helianthus, Rudbeckia, Silphium, Solidago, Helenium, Serratula, Cacalia, After, Lilium Martagon, Gentiana, cærulea, Chironia, Gentiana faponaria, Afclepias coccinea, Hypericum, Rhexia pulcherrima, &c. &c.

Obferved likewife in thefe Savannas abundance of the ludicrous Dionæa muscipula (Dionæa, Ellis epis, ad Linnæum, miraculum naturæ, folia

biloba,

biloba, radicalia, ciliata, conduplicanda, fenfibilia, infecta incarcerantia. Syft. vegetab. p. 335).

This wonderful plant feems to be diffinguished in the creation, by the Author of nature, with facultics eminently superior to every other vegetable production\*; specimens of it were first communicated to the curious of the old world by John Bartram, the American botanist and traveller, who contributed as much, if not more, than any other man towards enriching the North American botanical nomenclature, as well as its natural history.

After traverfing these ample favannas, I gradually afcended fand hills to open Pine foreits; at evening got to Old town near Brunfwick, where I lodged. Brunfwick is a fea-port town on the Clarendon or Cape Fear river, about thirty miles above the capes; it is about thirty years fince this was the feat of government, when Arthur Dobbs, Efg. was governor and commander in chief of the province of North Carolina. Continued up the West fide of North West of Cape Fear river, and rested two or three days at the feat of F. Lucas, Efg. a few miles above Livingston's creek, a confiderable branch of the North West. This creek heads in yaft fwamps, in the vicinity of the beautiful lake Wakamaw, which is the fource of a fine river of that name, and runs a South course feventy or eighty miles, delivering its waters into Winvaw bay at George-town. The Wakamaw lake is twenty fix miles in circuit; the lands on its Eastern fhores are fertile, and the fituation delightful, gradually afcending from pleafing eminences; bounded on the North-West coast by vast rich fwamps, fit for the production of Rice: the lake

\* See fome account of it in the introduction.

47 I

is twelve miles Weft from — Moore's Efq. whofe villa is on the banks of the North Weft.

Proceeding again up the North Weft, croffed Carver's creek, and ftopped at Ashwood, the ancient feat of Colonel William Bartram. The houfe ftands on the high banks of the river, near feventy feet in height above the furface of the water; this high bluff continues two or three miles on the river, and commands a magnificent profpect of the low lands oppofite, when in their native state, prefenting to the view grand forefts and expanfive Cane meadows: the trees which compose thefe forefts are generally of the following tribes, Quercus tinctoria, Querc. alba, Querc. phillos, Querc. aquatica, Querc. hemispherica, Fraxinus excelfior, Platanus occidentalis, Liriodendron tulipifera, Liquidambar styraciflua, Ulmus, Ti-lia, Juglans hiccory, Juglans cinerea, Juglans nigra, Morus rubra, Gleditfia triacanthus, Hopea tinctoria, Nyffa aquatica, Nyffa fylvatica, Carpinus and many more; the Cupreffus difficha as stately and beautiful as I have seen any where. When these lands are cleared of their timber and cultivated, they produce abundantly, particularlv, Wheat, Zea, Cotton, Hemp, Flax, with variety of excellent vegetables. This perpendieular bank of the river, by which the waters fwiftly glide along, difcovers at once the various ftrata of the earth of this low maritime country. For the most part, the upper stratum confiss of a light, fandy, pale, yellowifh mould or loam, for ten or twelve feet in depth (except the flat level land back from the rivers, where the clays or marle approach very near the furface, and the ridges of fand hills, where the clays lie much deeper): this fandy mould or loam lies upon a deep

deep bed of black or dark flate coloured faline and fulphureous earth, which is composed of horizontal thin flakes or laminæ, feparated by means of very thin, almost imperceptible veins or strata of fine micaceous particles, which drain or percolate a clear water, continually exuding, or trickling down, and forming little rills and diminutive cataracts, being conducted by perpendicular chinks or fiffures: in fome places, a portion of this clear water or transparent vapour, feems to coagulate on the edges of the veins and fiffures, leaving a reddifh curd or jelly-like fubftance flicking to them, which I should suppose indicates it to spring from a ferruginous fource, especially fince it discovers a chalybeate fcent and tafte : in other places, thefe fiffures flow evidently a crystallization of exceeding fine white falts, which have an aluminous or vitriolic fcent : they are pyrites, marcafites, or fulphureous nodules, fhining like brafs, of various fizes and forms, fome fingle and others conglomerated: other places prefent to view, ftrata of heterogeneous matter, lying between the upper loamy ftratum and the bed of black faline earth, confifting of various kinds of fea shells, some whole, others broken to pieces, and even pulverized, which fill up the cavities of the entire shells, and the interstices betwixt them : at other places we observe, two or three feet below the furface or virgin mould, a ftratum, of four, five, or fix feet in depth, of brownifh marle, on a bed of teftaceous rocks; a petrifaction composed apparently of various kinds of fea shells, belemnites, fand, &c. combined or united with a calcareous cement : these masses of rocks are in fome places detached by veins and strata of a heterogeneous earth, confifting of fea shells and other marine productions, as well as terrestial, which feem feem to be fossile, or in some degree of petrifaction, or otherwife transmuted, particularly those curious productions called birds bills, or fharks teeth (dentes carchariæ), belemnites, &c. loofely mixed with a deficcated earth composed of fand, clay, particles of marle, vegetable rubbish, &c. And again we observe shells, marcasites, belemnites, dentes carchariæ, with pieces of wood transmuted, black and hard as fea coal, fingly interfperfed in the black vitriolic strata of earth: when this black earth is exposed to the fun and dry air, the little thin laminæ separate, and soon discover a fine, white crystallization, or aluminous powder; but this very foon difappears, being again incorporated with the general mafs, which gradually diffolves or falls like quick-lime, and appears then a gravish, extremely fine, dry micaceous powder, which fmells like gun-powder.

The North Weft of Cape Fear, here at Afhwood, is near three hundred yards over (when the ftream is low and within its banks), and is eighty or ninety miles above the capes. Obferved growing hereabouts a great variety of very curious and beautiful flowering and fweet fcented fhrubs, particularly Callicarpa, Æsculus pavia, floribus coccineis, caule fuffruticofo, Æfculus fylvatica, floribus ex albo et carneo eleganter variegatis, caule arboreo, Ptelea trifoliata, Styrax, Stewartia, Fothergilla, Amorpha, Myrica, Stillingia fruticofa, foliis lanceolatis, utrinque glabris, fructu tricocco, Olea Americana, foliis lanceolato-ellipticis, baccis atro-purpureis (Purple berried bay), Catefby. Ilex dahoon, Caffine Yapon, Azalea, varieties, Kalmea, Cyrilla, Liquidambar peregrinum, Sideroxylon, Andromeda lucida, &c.

Leaving Ashwood, and continuing up the West

fide

fide of the river, about forty miles, in the banks of a creek, five or fix feet below the fandy furface, are to be feen projecting out many feet in length, trunks of trees petrified to very hard ftone; they lie between the upper fandy ftratum and the common bed of blackifh vitriolic earth; and thefe ftone trees are to be feen in the fame fituation, fticking out of the perpendicular banks or bluffs of the river in this region: there are feveral trunks of large trees with their bark, ftumps of their limbs and roots, lying petrified on the fand hills and Pine forefts, near the road about this creek, not far from the faw-mills.

Croffed Rock-fifh, a large branch of the North Weft, near its mouth or confluence, and at evening arrived at Crofs-Creeks, another very confiderable branch of the river, flowing in through its West banks. This creek gave name to a fine inland trading town, on fome heights or fwelling hills, from whence the creek defcends precipitately, then gently meanders near a mile, through lower level lands, to its confluence with the river, affording most convenient mill-feats : these profpects induced active, enterprifing men to avail themfelves of fuch advantages pointed out to them by nature; they built mills, which drew people to the place, and thefe obferving eligible fituations for other profitable improvements, bought lots and erected tenements, where they exercifed mechanic arts, as fmiths, wheelwrights, carpenters, coopers, tanners, &c. And at length merchants were encouraged to adventure and fettle : in fhort, within eight or ten years, from a grift-mill, faw-mill, fmith-fhop and a tavern, arofe a flourishing commercial town, the feat of government of the county of

of Cumberland. The leading men of the county, feeing plainly the fuperior advantages of this fituation, on the banks of a famous navigable river, petitioned the Affembly for a charter to empower them to purchase a district, sufficient for founding a large town; which being granted, they immediately proceeded to mark out its precincts, and named the new city Cambelton, a compliment to ---- Cambel, Efq. a gentleman of merit, and a citizen of the county," When I was here about twenty years ago, this town was marking out its bounds, and there were then about twenty habitations; and now there are above a thousand houses, many wealthy merchants, and respectable public buildings, a vaft refort of inhabitants and travellers, and continual brick commerce by waggons, from the back fettlements, with large trading boats, to and from Wilmington, the feaport and flourishing trading town on the Clarendon, about forty miles above the capes, which is about one hundred miles below this town. The Clarendon or Cape Fear river has its fource in the Cherokee mountains, where its numerous confederate streams unite; af, ter leaving the first ridges of the mountains, it affumes the name of Haw river, and courfing the hilly fertile country, above one hundred and fifty miles, receives through its West banks the West branch, called Deep River, and after this union, takes the name of the North-West of Cape Fear, from whence down to Cambelton, about eighty miles, it is navigable for perriauguas of confider. able burthen.

Obferved near Cambelton a very curious fcandent Fern (Pteris fcandens) rambling over low bushes, in humid fituations; the lower larger fronds were digitated, or rather radiated, but towards towards the tops or extremities of the branches they became trifid, haftated, and laftly lanceolate : it is a delicate plant, of a yellowifh lively green, and would be an ornament in a garden.

Sat off again to Cambelton, continuing yet up the North West about fixty miles; croffed over this branch, and foon after croffed the Roanoke, and then refted a few days at Mr. Lucas's, a wor. thy old gentleman, a planter on Meherren river. Obferved strolling over his fences and stables, a very fingular and ufeful fpecies of the Gourd (Cucurbita lagenaria); its neck or handle is above two feet in length, and not above an inch in diameter; its belly round, which would contain about a pint; it makes excellent ladles, funnels, &c. At a little diftance from Mr. Lucas's, at the head of a fwamp near the high road, I observed a very curious fpecies of Prinos, which grows feven or eight feet high, the leaves broad, lanceolate, fharply ferrated, nervous, and of a deep green colour; but its ftriking beauty confifts in profuse clusters of fruit, collected about the cafes or origin of the laft fpring's fhoots; thefe berries are nearly round, about the fize of middling grapes, of a fine clear fcarlet colour, covered or invefted with an incarnate mift or nebulæ.

Being now arrived on the South border of Virginia, and the hoary frigid feafon far advanced, I fhall pafs as fpeedily as possible from hence to Pennfylvania, my native country; fince those cultivated regions of Virginia and Maryland, through which I defign to travel, have been over and over explored, and described by very able men in every branch of natural history.

After leaving Meherren, I foon arrived at Alexandria

## 478 TRAVELS IN NORTH AMERICA.

Alexandria in Virginia, a fine city on the Weft banks of the Patowmac, about the 26th of December, having had excellent roads, and pleafant, moderate weather, neither fnow nor ice to be feen, except a flight fall of fnow from a flying cloud, the day before I reached this place ; but this evening it clouded up from the West, the wind North-east and cold. Next morning the fnow was eight or ten inches deep on the ground, and the wind shifting to North-west, cleared up intenfely cold: I however fat off and croffed the river just below the falls, and landed at George-town in Maryland. The fnow was now deep every where around, the air cold to an extreme, and the roads deep under fnow or flippery with ice, rendered the travelling uncomfortable.

Being now arrived at Wright's-ferry, on the Sufquehanna, I began anxioufly to look towards home, but here I found almost infuperable embarrassments: the river being but half frozen over, there was no poffibility of croffing here; but hearing that people croffed at Anderfon's, about five miles above, early next morning I fat off again up the river, in company with feveral travellers, fome for Philadelphia: "arriving at the ferry, we were joined by a number of traders, with their packhorfes loaded with leather and furs, where we all agreed to venture over together; and keeping at a moderate diftance from each other, examining well our icy bridge, and being careful of our fteps, we landed fafe on the oppofite fhore, got to Lancaster in the evening, and next morning fat forward again towards Philadelphia, and in two days more arrived at my father's house on the banks of the river Schuylkill, within four miles of the city, January 1778.

# ACCOUNT

OF THE

PERSONS, MANNERS, CUSTOMS AND GOVERNMENT,

OF THE

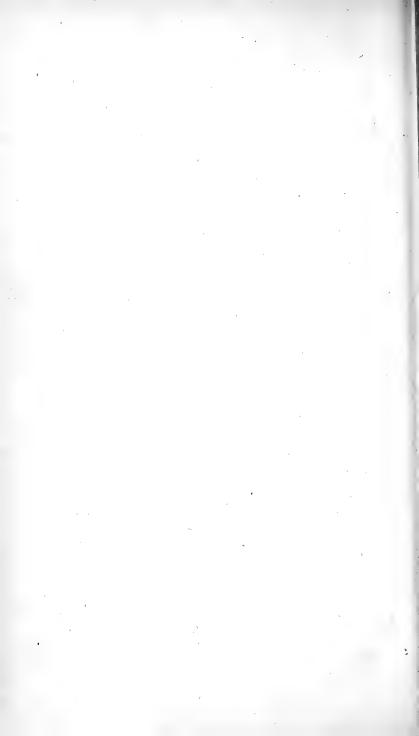

MUSCOGULGES, OR CREEKS,

CHEROKEES, CHACTAWS, &c.

ABORIGINES OF THE CONTINENT OF

NORTH AMERICA.

WILLIAM BARTRAM.

#### NORTH AMERICA:

# PART IV.

## CHAP. I.

Defcription of the character, customs and perfons of the American Aborigines, from my own observations, as well as from the general and impartial report of ancient, respectable men, either of their own people, or white traders, who have fpent many days of their lives among it them.

PERSONS AND QUALIFICATIONS.

THE males of the Cherokees, Muscogulges, Siminoles, Chicafaws, Chactaws, and confederate tribes of the Creeks, are tall, erect, and moderately robuft; their limbs well fhaped, fo as generally to form a perfect human figure ; their features regular, and countenance open, dignified and placid; yet the forehead and brow fo formed, as to strike you inftantly with heroifm and bravery; the eye though rather fmall, yet active and full of fire; the iris always black, and the nofe commonly inclining to the aquiline.

Their countenance and actions exhibit an air of magnanimity, fuperiority and independence.

Their complexion, of a reddiff brown or copper colour; their hair long, lank, coarfe, and black as a raven, and reflecting the like luftre at different exposures to the light.

The women of the Cherokees, are tall, flender, erect and of a delicate frame; their features formed with perfect fymmetry, their countenance cheer-11 ful

ful and friendly, and they move with a becoming grace and dignity.

The Mufcogulge women, though remarkably fhort of stature, are well formed; their vilage round, features regular and beautiful; the brow high and arched; the eye large, black and languifhing, expressive of modesty, diffidence, and bashfulness; these charms are their defensive and offenfive weapons, and they know very well how to play them off, and under cover of these alluring graces, are concealed the most fubtile artifice; they are however loving and affectionate: they are. I believe, the fmallest race of women yet known, feldom above five feet high, and I believe the greater number never arrive to that stature; their hands and feet not larger than those of Europeans of nine or ten years of age: yet the men are of gigantic stature, a full fize larger than Europeans; many of them above fix feet, and few under that, or five feet eight or ten inches. Their complexion much darker than any of the tribes to the North of them that I have feen. This defcription will I believe comprehend the Mufcogulges, their confederates, the Chactaws, and I believe the Chicafaws) though I have never feen their women), excepting however fome bands of the Siminoles, Uches and Savannucas, who are rather taller and flenderer, and their complexion brighter.

The Cherokees are yet taller and more robust than the Muscogulges, and by far the largest race of men I have seen\*; their complexions brighter

482

and

<sup>\*</sup> There are, however, fome exceptions to this general obfervation, as I have myfelf witneffed. Their prefent grand chief or emperor (the Little Carpenter, Atta-kul-kulla) is a man of remarkably fmall flature, flender, and of a delicate frame, the only inflance I faw in the nation : but he is a man of fuperior abilities.

#### NORTH AMERICA.

and fomewhat of the olive caft, effectially the adults; and fome of their young women are nearly as fair and blooming as European women.

The Cherokees in their difpositions and manners are grave and fleady: diguified and circumfpect in their deportment; rather flow and referved in conversation; yet frank, cheerful, and humane; tenacious of the liberties and natural rights of man; fecret, deliberate and determined in their councils; honeft, just and liberal, and ready always to facrifice every pleafure and gratification, even their blood, and life itfelf, to defend their territory and maintain their rights. They do homage to the Mufcogulges with reluctance, and are impatient under that galling yoke. I was witnefs to a most humiliating lash, which they paffively received from their red mafters, at the great congress and treaty of Augusta, when thefe people acceded with the Creeks, to the ceffion of the New Purchafe; where were about three hundred of the Creeks, a great part of whom were warriors, and about one hundred Cherokees.

The first day of convention opened with fettling the preliminaries, one article of which was a demand on the part of the Georgians, to a territory lying on the Tugilo, and claimed by them both, which it feems the Cherokees had, previous to the opening of congress, privately conveyed to the Georgians, unknown to the Creeks. The Georgians mentioning this as a matter fettled, the Creeks demanded in council, on what foundation they built that claim, faying they had never ceded these lands. The Georgians answered, that they bought them of their friends and brothers the Cherokees. The creeks nettled and incenfed at

1 i 2

this,

this, a chief and warrior started up, and with an agitated and terrific countenance, frowning menaces and difdain, fixed his eyes on the Cherokee chiefs, and afked them what right they had to give away their lands, calling them old women, and faying they had long ago obliged them to wear the petticoat, a most humiliating and degrading ftroke, in the prefence of the chiefs of the whole Muscogulge confederacy, of the Chicasaws, prin-cipal men and citizens of Georgia, Carolina, Virginia, Maryland and Pennfylvania, in the face of their own chiefs and citizens, and amidst the laugh and jeers of the affembly, efpecially the young men of Virginia, their old enemies and dreaded neighbours : but humiliating as it really was, they were obliged to bear the ftigma paffively, and even without a reply.

And moreover, thefe arrogant braves and ufurpers carried their pride and importance to fuch lengths, as even to threaten to diffolve the congrefs and return home, unlefs the Georgians confented to annul the fecret treaty with the Cherokees, and receive that territory immediately from them, as acknowledging their exclusive right of alienation; which was complied with, though violently extorted from the Cherokees, contrary to right and fanction of treaties; fince the Savanna river and its waters were acknowledged to be the natural and juft bounds of territory betwixt the Cherokees and Mufcogulges.

The national character of the Muſcogulges, when confidered in a political view, exhibits a portraiture of a great or illustrious heroe. A proud, haughty and arrogant race of men; they are brave and valiant in war, ambitious of conqueſt, reſtleſs and perpetually exercifing their arms. arms, yet magnanimous and merciful to a vanquifhed enemy, when he fubmits and feeks their friendfhip and protection: always uniting the vanquifhed tribes in confederacy with them; when they immediately enjoy, unexceptionably, every right of free citizens, and are from that moment united in one common band of brotherhood. They were never known to exterminate a tribe, except the Yamafees, who would never fubmit on any terms, but fought it out to the laft, only about forty or fifty of them efcaping at the laft decifive battle, who threw themfelves under the protection of the Spaniards at St. Auguftine.

According to their own account, which I believe to be true, after their arrival in this country, they joined in alliance and perpetual amity with the Britifh colonifts of South Carolina and Georgia, which they never openly violated; but on the contrary, purfued every ftep to ftrengthen the alliance; and their aged chiefs to this day, fpeak of it with tears of joy, and exult in that memorable tranfaction, as one of the most glorious events in the annals of their nation,

As an inftance of their ideas of political impartial juffice, and homage to the fupreme Being, as the high arbiter of human transactions, who alone claims the right of taking away the life of man, I beg leave to offer to the reader's confideration, the following event, as I had it from the mouth of a Spaniard, a respectable inhabitant of East Florida.

The fon of the Spanish governor of St. Augustine, together with two young gentlemen, his friends and affociates, conceived a defign of amufing themselves in a party of sport, at hunting ing and fishing. Having provided themselves with a convenient bark, ammunition, filhing tackle, &c. they fet fail, directing their courfe South, along the coaft, towards the point of Florida, putting into bays and rivers, as conveniency and the profpect of game invited them. The pleafing rural and diversified fcenes of the Florida coaft, imperceptibly allured them far to the fouth; beyond the Spanish fortified post. Unfortunate youths! regardlefs of the advice and injunctions of their parents and friends, still pursuing the delufive objects, they entered a harbour at evening with a view of chafing the roe-buck, and hunting up the flurdy bear, folacing themfelves with delicious fruits, and repofing under aromatic fhades : when, alas! cruel unexpected event! in the beatific moments of their flumbers, they were furrounded, arrefted and carried off by a predatory band of Creek Indians, proud of the capture, fo rich a prize; they hurry away into cruel bondage the haplefs youths, conducting them by devious paths through dreary fwamps and boundlefs favannas, to the Nation.

At that time the Indians were at furious war with the Spaniards, fearcely any bounds fet to their cruelties on either fide : in fhort, the miferable youths were condemned to be burnt.

But there were English traders in these towns, who learning the character of the captives, and expecting great rewards from the Spanish governor, if they could deliver them, petitioned the Indians on their behalf, expressing their wishes to obtain their refcue, offering a great ransom; acquainting them at the fame time, that they were young men of high rank, and one of them the governor's fon.

486

Upon

#### NORTH AMERICA.

Upon this, the head men, or chiefs of the whole nation, were convened, and after folemn and mature deliberation, they returned the traders their final answer and determination, which was as follows:

"Brothers and friends. We have been confidering upon this bufinefs concerning the captives and that, under the eye and fear of the Great Spirit. You know that thefe people are our cruel enemies; they fave no lives of us red men, who fall in their power. You fay that the youth is the fon of the Spanifh governor; we believe it; we are forry he has fallen into our hands, but he is our enemy: the two young men (his friends) are equally our enemies; we are forry to fee them here; but we know no difference in their flefh and blood; they are equally our enemies; if we fave one we mult fave all three: but we cannot do it; the red men require their blood to appeale the fpirits 'of their flain relatives; they have entrufted us with the guardianfhip of our laws and rights, we cannot betray them.

"However we have a facred prefcription relative to this affair, which allows us to extend mercy to a certain degree: a third is faved by lot: the Great Spirit allows us to put it to that decifion; he is no refpecter of perfons." The lots were caft. The governor's fon was taken and burnt.

If we confider them with refpect to their private character or in a moral view, they muft, I think, claim our approbation, if we diveft ourfelves of prejudice and think freely. As moral men they certainly ftand in no need of European civilization.

They are juft, honeft, liberal, and hofpitable to ftrangers; confiderate, loving and affectionate to their wives and relations; fond of their children; induftrious, frugal, temperate, and perfevering; charitable and forbearing. I have been weeks and months amongft them and in their towns, and never obferved the leaft fign of contention or wrangling: never faw an inftance of an Indian beating his wife, or even reproving her in anger. In this cafe they ftand as examples of reproof to the most civilized nations, as not being defective in juffice, gratitude and a good underftanding; for indeed their wives merit their efteem and the most gentle treatment, they being industrious, frugal, careful, loving and affectionate.

The Mufcogulges are more volatile, fprightly and talkative than their Northern neighbours, the Cherokees; and, though far more diftant from the white fettlements than any nation Eaft of the Miffiffippi or Ohio, appear evidently to have made greater advances towards the refinements of true civilization, which cannot, in the leaft degree, be attributed to the good examples of the white people.

Their internal police and family economy at once engage the notice of European travellers, and incontrovertibly place thefe people in an illustrious point of view: their liberality, intimacy and friendly intercourfe one with another, without any reftraint of ceremonious formality, as if they were even infensible of the use or necessity of affociating the passions or affections of avarice, ambition or covetous formation or an economic and the second second

A man goes forth on his bufinels or avocations; he calls in at another town; if he wants victuals

#### NORTH AMERICA.

victuals, reft or focial conversation, he confidently approaches the door of the first house he chooses, faying "I am come;" the good man or woman replies, "You are; it's well." Immediately victuals and drink are ready; he eats and drinks a little, then fmokes tobacco, and converfes either of private matters, public talks, or the news of the town. He rifes and fays, " I go!" the other an-fwers, " You do!" He then proceeds again, and steps in at the next habitation he likes, or repairs to the public fquare, where are people always converfing by day, or dancing all night, or to fome more private affembly, as he likes; he needs no one to introduce him, any more than the blackbird or thrush, when he repairs to the fruitful groves, to regale on their luxuries, and entertain the fond female with evening longs.

It is aftonishing, though a fact, as well as a fharp reproof to the white people, if they will allow themselves liberty to reflect and form a just eftimate, and I must own elevates these people to the first rank amongst mankind, that they have been able to refift the continual efforts of the complicated hoft of vices, that have for ages over-run the nations of the old world, and fo contaminated their morals; yet more fo, fince fuch vaft armies of these evil spirits have invaded this continent, and clofely invefted them on all fides. Aftonishing indeed ! when we behold the ill, immoral conduct of too many white people, who refide amongft them: notwithstanding which, it feems natural, eligible, and even easy, for these simple, illiterate people, to put in practice those beautiful lectures delivered to us by the ancient fages and philosophers, and recorded for our instruction.

#### TRAVELS IN

I faw a young Indian in the Nation, who when prefent, and beholding the fcenes of mad intemperance and folly acted by the white men in the town, clapped his hand to his breaft, and with a fmile, looked aloft as if ftruck with aftonifhment, and wrapt in love and adoration to the Deity; as who fhould fay, " O thou Great and Good Spirit! we are indeed fenfible of thy benignity and favour to us red men, in denying us the understanding of white men. We did not know before they came amongft us that mankind could become fo bafe, and fall fo below the dignity of their nature. Defend us from their manners, laws and power."

The Muſcogulges, with their confederates, the Chactaws, Chicafaws, and perhaps the Cherokees, eminently deferve the encomium of all nations, for their wiſdom and virtue in reſiſting and even repelling the greateſt, and even the common enemy of mankind, at leaſt of moſt of the European nations, I mean ſpirituous ltquors.

The first and most cogent article in all their treaties with the white people, is, that there shall not be any kind of spirituous liquors fold or brought into their towns; and the traders are allowed but two kegs (five gallons each) which is supposed to be fufficient for a company, to ferve them on the road; and if any of this remains on their approaching the towns, they must spill it on the ground or fecrete it on the road, for it must not come into the town.

On my journey from Mobile to the Nation, just after we had passed the junction of the Pensacola road with our path, two young traders overtook us on their way to the Nation. We inquired what

#### NORTH AMERICA.

what news? They informed us that they were running about forty kegs of Jamaica fpirits (which by dafhing would have made at leaft eighty kegs) to the Nation; and after having left the town three or four days, they were furprifed on the road in the evening, juft after they had come to camp, by a party of Creeks, who difcovering their fpecies of merchandize, they forthwith ftruck their tomahawks into every keg, giving the liquor to the thirfty fand, not tafting a drop of it themfelves; and they had enough to do to keep the tomahawks from their own fkulls.

How are we to account for their excellent policy in civil government: it cannot derive its influence from coercive laws, for they have no fuch artificial fyftem. Divine wifdom dictates and they obey.

We fee and know full well the direful effects of this torrent of evil, which has its fource in hell; and we know furely, as well as thefe favages, how to divert its courfe and fupprefs its inundations. Do we want wifdom and virtue? let our youth then repair to the venerable councils of the Mufcogulges.

#### TRAVELS IN

492

## CHAP. II.

## On their Government and Civil Society.

THE conflitution or fystem of their police is fimply natural, and as little complicated as that which is supposed to direct or rule the approved economy of the ant and the bee; and feems to be nothing more than the fimple dictates of natural reason, plain to every one, yet recommended to them by their wife and virtuous elders as divine. becaufe neceffary for fecuring mutual happinefs ; equally binding and effectual, as being proposed and affented to in the general combination : every one's confcience being a fufficient conviction (the golden rule, do as you would be done by) instantly prefents to view, and produces a fociety of peace and love, which in effect better maintains human happines, than the most complicated fyftem of modern politics, or fumptuary laws, enforced by coercive means : for here the people are all on an equality, as to the poffeffion and enjoyments of the common neceffaries and conveniences of life, for luxries and fuperfluities they have none.

This natural conflictution is fimply fubordinate; and the fupreme, fovereign or executive power refides in a council of elderly chiefs, warriors and others, refpectable for wifdom, valour and virtue.

At the head of this venerable fenate, prefides their mico or king, which fignifies a magiltrate or chief ruler: the governors of Carolina, Georgia, &c. are called micos; and the king of England is called Ant-apala-mico-clucco\*, that is the great king, over or beyond the great water.

\* Clucco fignifies great or excellent

The

The king, although he is acknowledged to be the firft and greateft man in the town or tribe, and honoured with every due and rational mark of love and efteem, and when prefiding in council, with a humility and homage as reverent as that paid to the most despotic monarch in Europe or the East, and when absent, his seat is not filled by any other perfon, yet he is not dreaded; and when out of the council, he affociates with the people as a common man, converses with them, and they with him, in perfect ease and familiarity.

The mico or king, though elective, yet his advancement to that fupreme dignity muft be underftood in a very different light from the elective monarchs of the old world, where the progrefs to magiftracy is generally effected by fchifm and the influence of friends gained by craft, bribery, and often by more violent efforts; and after the throne is obtained, by meafures little better than ufurpation, he nuft be protected and fupported there, by the fame bafe means that carried him thither.

But here behold the majefty of the Mufcogulge mice! he does not either publicly or privately beg of the people to place him in a fituation to command and rule them: no, his appearance is altogether myfterious; as a beneficent deity he rifes king over them, as the fun rifes to blefs the earth !

No one will tell you how or when he became their king; but he is univerfally acknowledged to be the greateft perfon among them, and he is loved, effeemed and reverenced, although he affociates, eats, drinks and dances with them in common as another man; his drefs is the fame, and

and a ftranger could not diftinguish the king's habitation, from that of any other citizen, by any fort of splendour or magnificence; yet he perceives they act as though their mico beheld them, himfelf invisible. In a word, their mico feems to them the representative of Providence or the Great Spirit, whom they acknowledge to prefide over and influence their councils and public proceedings. He perfonally prefides daily in their councils, either at the rotunda or public fquare: and even here his voice, in regard to bufinefs in hand, is regarded no more, than any other chief's or fenator's, no farther than his advice, as being the best and wifest man of the tribe, and not by virtue of regal prerogative. But whether their ultimate decifions require unanimity, or only a majority of voices, I am uncertain; but probably where there is a majority, the minority voluntarily accede.

The most active part the mico takes is in the civil government of the town or tribe : here he has the power and prerogative of calling a council, to deliberate on peace and war, or all public concerns, as inquiring into, and deciding upon complaints and differences ; but he has not the least fhadow of exclusive executive power. He is complimented with the first visits of strangers, giving audience to ambaffadors, with prefents, and he has also the difposal of the public granary.

The next man in order of dignity and power, is the great war chief: he reprefents and exercifes the dignity of the mico, in his abfence, in council; his voice is of the greateft weight, in military affairs; his power and authority are entirely independent of the mico, though when a mico mico goes on an expedition, he heads the army, and is there the war chief. There are many of these war chiefs in a town or tribe, who are captains or leaders of military parties; they are elderly men, who in their youthful days have diftinguished themselves in war by valour, subtilty and intrepidity; and these veteran chiefs, in a great degree, constitute their truly dignified and venerable fenates.

There is in every town or tribe a high prieft, ufually called by the white people jugglers, or conjurers, befides feveral juniors or graduates. But the ancient high priest or seer, prefides in spiritual affairs, and is a perfon of confequence; he maintains and exercises great influence in the state, particularly in military affairs; the fenate never determine on an expedition against their enemy without his counfel and affiftance. These people generally believe that their feer has communion with powerful invisible fpirits, who they suppose have a share in the rule and government of human affairs, as well as the elements ; that he can predict the refult of an expedition; and his influence is fo great, that they have been known frequently to ftop, and turn back an army, when within a day's journey of their enemy, after, a' march of feveral hundred miles; and indeed their predictions have furprized many people. They foretel rain or drought, and pretend to bring rain at pleafure, cure difeafes, and exercife witchcraft, invoke or expel evil spirits, and even affume the power of directing thunder and lightning.

These Indians are by no means idolaters, unless their puffing the tobacco fmoke towards the fun, and rejoicing at the appearance of the new moon,

moon\*, may be termed fo. So far from idolatry are they, that they have no images amongst them; nor any religious rite or ceremony that I could perceive ; but adore the Great Spirit, the giver and taker away of the breath of life, with the most profound and respectful homage. They believe in a future state, where the spirit exists, which they call the world of fpirits, where they enjoy different degrees of tranquillity or comfort, agreeably to their life fpent here: a perfon who in his life has' been an industrious hunter, provided well for his family, an intrepid and active warrior, juft, upright, and done all the good he could, will, they fay, in the world of fpirits, live in a warm, pleafant country, where are expansive, green, flowery favannas and high forefts, watered with rivers of pure waters, replenished with deer, and every species of game; a ferene, unclouded and peaceful fky; in fhort, where there is fulnefs of pleafure, uninterrupted.

They have many accounts of trances and visions of their people, who have been fupposed to be dead, but afterwards reviving, have related their visions, which tend to enforce the practice of virtue and the moral duties.

Before I went amongst the Indians, I had often heard it reported, that these people, when their parents, through extreme old age, become decrepid and helples, in compassion for their miseries, fend them to the other world, by a stroke of the tomahawk or bullet. Such a degree of depravity and species of impiety always appeared

<sup>\*</sup> I have observed the young fellows very merry and jocofe, at the appearance of the new moon, faying, how ashamed the looks under the veil, fince fleeping with the fun these two or three nights, fine is ashamed to thow her face, &c

to me fo incredibly inhuman and horrid, that it was with the utmost difficulty I affumed resolution fufficient to enquire into it.

The traders affured me that they knew no inftance of fuch barbarifm; but that there had been inftances of the communities performing fuch a deed at the earneft requeft of the victim.

When I was at Mucclaffe town, early one morning, at the invitation of the chief trader, we repaired to the public fquare, taking with us fome prefents for the Indian chiefs. On our arrival we took our feats in a circle of venerable men, round a fire in the centre of the area: other citizens were continually coming in, and amongst them I was ftruck with awe and veneration at the appearance of a very aged man; his hair, what little he had, was as white as fnow; he was conducted by three young men, one having hold of each arm, and the third behind to fleady him. On his approach the whole circle faluted him, "welcome," and made way for him : he looked as fmiling and cheerful as youth, yet ftone-blind by extreme old age : he was the most ancient chief of the town, and they all feemed to reverence him. Soon after the old man had feated himfelf, I distributed my prefents, giving him a very fine handkerchief and a twift of choice tobacco, which paffed through the hands of an elderly chief who fat next him, telling him it was a prefent from one of their white brothers, lately arrived in the nation from Charleston: he received the prefent with a fmile, and thanked me, returning the favour immediately with his own ftone pipe and cat fkin of tobacco: and then complimented me with a long oration, the purport of which was the value he fet on the friendship of Kk the

the Carolinians. He faid, that when he was a young man they had no iron hatchets, pots, hoes, knives, razors nor guns, that they then made ufe of their own ftone axes, clay pots, flint knives, bows and arrows; and that he was the first man who brought the white people's goods into his town, which he did on his back from Charleston, five hundred miles on foot, for they had no horfes then amongst them.

The trader then related to me an anecdote concerning this ancient patriarch, which occurred not long before.

One morning after his attendants had led him to the council fire, before feating himfelf, he addreffed himfelf to the people after this manner—

"You yet love me; what can I do now to merit your regard? nothing; I am good for nothing; I cannot fee to fhoot the buck or hunt up the flurdy bear; I know I am but a burthen to you; I have lived long enough; now let my fpirit go; I want to fee the warriors of my youth in the country of fpirits: (bareing his breaft) here is the hatchet, take it and ftrike." They anfwered with one united voice, "We will not; we cannot; we want you here."

## CHAP-

#### NORTH AMERICA,

## CHAP. III.

## Of their Drefs, Feafts and Divertisements.

THE youth of both fexes are fond of decorating themfelves with external ornaments. The men fhave their head, leaving only a narrow creft or comb, beginning at the crown of the head, where it is about two inches broad and about the fame height, and ftands frizzed upright; but this creft tending backwards, gradually widens, covering the hinder part of the head and back of the neck: the lank hair behind is ornamented with pendant filver quills, and then jointed or articulated filver plates; and ufually the middle fafcicle of hair, being by far the longeft, is wrapped in a large quill of filver, or the joint of a fmall reed, curioufly fculptured and painted, the hair continuing through it terminates in a tail or taffel.

Their ears are lacerated, feparating the border or cartilaginous limb, which at first is bound round very close and tight with leather strings or thongs, and anointed with fresh bear's oil, until healed : a piece of lead being fastened to it, by its weight extends this cartilage an incredible length, which afterwards being craped, or bound round in brass or filver wire, extends femicircularly like a bow or crefcent; and it is then very elastic, even so as to fpring and bound about with the least motion or flexure of the body; this is decorated with fost white plumes of heron feathers.

A very curious diadem or band, about four inches broad, and ingenioufly wrought or woven, and curioufly decorated with ftones, beads, wampum, porcupine quills, &c. encircles their K k 2 temples:

#### TRAVELS IN

temples; the front peak of it being embellished with a high waving plume, of crane or heron feathers.

The clothing of their body is very fimple and frugal. Sometimes a ruffled fhirt of fine linen, next the fkin, and a flap, which covers their lower parts; this garment fomewhat refembles the ancient Roman breeches, or the kilt of the Highlanders; it ufually confifts of a piece of blue cloth, about eighteen inches wide; this they pafs between their thighs, and both ends being taken up and drawn through a belt round their waift, the ends fall down, one before, and the other behind, not quite to the knee; this flap is ufually plaited and indented at the ends, and ornamented with beads, tinfel lace, &c.

The leg is furnished with cloth boots; they reach from the ancle to the calf, and are ornamented with lace, beads, filver bells, &c.

The ftillepica or moccafin defends and adorns the feet; it feems to be an imitation of the ancient bufkin or fandal, very ingenioufly made of deer fkins, dreffed very foft, and curioufly ornamented according to fancy.

Befide this attire, they have a large mantle of the fineft cloth they are able to purchafe, always either of a fcarlet or blue colour; this mantle is fancifully decorated with rich lace or fringe round the border, and often with little round filver, or brafs bells. Some have a fhort cloak, just large enough to cover the fhoulders and breast; this is most ingeniously constructed, of feathers woven or placed in a natural imbricated manner, usually of the fcarlet feathers of the flamingo, or others of the gayest colour. They

#### NORTH AMERICA.

They have large filver crefcents, or gorgets, which being fufpended by a ribband round the neck, lie upon the breaft; and the arms are ornamented with filver bands, or bracelets, and filver and gold chains, &c. a collar invefts the neck.

The head, neck and breaft, are painted with vermillion, and fome of the warriors have the fkin of the breaft, and mufcular parts of the body, very curioufly inferibed, or adorned, with hieroglyphick ferolls, flowers, figures of animals, ftars, crefeents, and the fun in the centre of the breaft. This painting of the flefh, I underftand, is performed in their youth, by pricking the fkin with a needle, until the blood ftarts, and rubbing in a blueifh tinft, which is as permanent as their life. The fhirt hangs loofe about the waift, like a frock, or fplit down before, refembling a gown, and is fometimes wrapped clofe, and the waift encircled by a curious belt or fafh.

The drefs of the females is fomewhat different from that of the men: their flap or petticoat is made after a different manner, is larger and longer, reaching almost to the middle of the leg, and is put on differently; they have no fhirt or fhift, but a little fhort waiftcoat, ufually made of callico, printed linen, or fine cloth, decorated with lace, beads, &c. They never wear boots or flockings, but their buskins reach to the middle of the leg. They never cut their hair, but plait it in wreaths, which are turned up, and fastened on the crown, with a filver broach, forming a wreathed top-knot, decorated with an incredible quantity of filk ribbands, of various colours, which ftream down on every fide, almost to the ground. They never paint, except those of a particular class, when disposed to grant certain favours to the other fex.

SOI-

But

But these decorations are only to be confidered as indulgencies on particular occasions, and the privilege of youth; as at weddings, feftivals, dances, &c. or when the men affemble to act the war farce, on the evening immediately preceding their march on a hoftile expedition; for ufually they are almost naked, contenting themselves with the flap and fometimes a fhirt, boots and moccafins. The mantle is feldom worn by the men, except at night, in the winter feafon, when extremely cold; and by the women at dances, when it ferves the purpose of a veil; and the females always wear the jacket, flap, and buskin, even children as foon or before they can walk; whereas the male youth go perfectly naked until they are twelve or fifteen years of age.

The junior priefls or fludents conflantly wear the mantle or robe, which is white; and they have a great owl fkin cafed and fluffed very ingenioufly, fo well executed, as almost to reprefent the living bird, having large fparkling glafs beads, or buttons, fixed in the head for eyes: this enfign of wifdom and divination, they wear fometimes as a creft on the top of the head, at other times the image fits on the arm, or is borne on the hand. These bachelors are alfo diftinguifhable from the other people, by their taciturnity, grave and folemn countenance, dignified ftep, and finging to themfelves fongs or hymns, in a low fweet voice, as they ftroll **about** the towns.

These reople like all other nations, are fond of mufic and dancing : their mufic is both vocal and inftrumental; but of the latter they have fcarcely any thing worth the name; the tambour, rattlegourd, and a kind of flute, made of a joint of reed

502

or

or the tibia of the deer's leg; on this inftrument they perform badly, and at best it is rather a hideous melancholy difcord, than harmony. It is onlyyoung fellows who amufe themfelves on this howling instrument; but the tambour and rattle, accompanied with their fweet low voices, produce a pathetic harmony, keeping exact time together, and the countenance of the mufician, at proper times, feems to express the folemn elevated ftate of the mind: at that time there feems not only a harmony between him and his inftrument, but it instantly touches the feelings of the attentive audience, as the influence of an active and powerful spirit; there is then an united universal fensation of delight and peaceful union of fouls throughout the affembly.

Their mufic, vocal and inftrumental, united, keeps exact time with the performers or dancers.

They have an endlefs variety of fteps, but the most common, and that which I term the most civil, and indeed the most admired and practifed amongst themselves, is a flow shuffling alternate ftep; both feet move forward one after the other, first the right foot foremost, and next the left, moving one after the other, in oppofite circles, i. e. first a circle of young men, and within, a circle of young women, moving together opposite ways, the men with the course of the fun, and the females contrary to it; the men strike their arm with the open hand, and the girls clap hands, and raife their fhrill fweet voices, answering an elevated fhout of the men at stated times of termination of the stanzas; and the girls perform an interlude or chorus feparately.

To accompany their dances they have fongs,

of

#### TRAVELS IN

of different claffes, as martial, bacchanalian and amorous; which laft, I must confess, are extravagantly libidinous; and they have moral fongs, which feem to be the most effeemed and practifed, and answer the purpose of religious lectures.

Some of their most favourite fongs and dances, they have from their enemies, the Chactaws; for it feems these people are very eminent for poetry and music; every town amongst them strives to excel each other in composing new fongs for dances; and by a custom amongst them, they must have at least one new fong, for exhibition, at every annual busk.

The young mustee, who came with me to the Mucclasses from Mobile, having Chactaw blood in his veins from his mother, was a fenfible young fellow, and by his father had been instructed in reading, writing and arithmetic, and could fpeak English very well. He took it into his head to travel into the Chactaw country : his views were magnanimous, and his defigns in the higheft degree commendable, nothing lefs than to inform himfelf of every species of arts and sciences, that might be of use and advantage when introduced into his own country, but more particularly mufic and poetry. With thefe views he privately left the Nation, went to Mobile, and there entered into the fervice of the trading company to the Chactaws, as a white man; his eafy, communicative, active and familiar difpofition and manners, being agreeable to that people, pro-cured him accels every where, and favoured his fubtilty and artifice : at length, however, the Chactaws hearing of his lineage and confanguinity with the Creeks, by the father's fide, pronounced him a Creek, and confequently an enemy

my and a fpy amongit them, and fecretly refolved to difpatch him. The young philofopher got notice of their fufpicions, and hoftile intentions, in time to make his efcape; though clofely purfued, he kept a-head of his fanguinary purfuers, arrived at Mobile, and threw himfelf under the protection of the Englifh, entered the fervice of the trader of Mucclaffe, who was then fetting off for the Nation, and notwithftanding the fpeed with which we travelled, narrowly efcaped the ardour and vigilance of his purfuing enemies, who furprifed a company of emigrants, in the defarts of Schambe, the very night after we met them, expecting to intercept him thereabout.

The young traveller having learned all their most celebrated new fongs and poetry, at a great dance and feftival in the Mucclaffe, a day or two after our arrival, the youth preffed him to give out fome of his new fongs: he complied with their entreaties, and the fongs and dance went round with harmony and eclat. There was a young Chactaw flave girl in the circle, who foon after difcovered very affecting fenfations of affliction and diftrefs of mind, and before the conclusion of the dance. many of her companions complimented her with fympathetic fighs and tears, from their own fparkling eyes. As foon as I had an opportunity, I inquired of the young Orpheus, the cause of that fong being fo diffreffing to the young flave. He replied, that when the was lately taken captive, her father and brothers were flain in the contest, and she understanding the sense of the fong, called to remembrance the tragical fate of her family, and could not forbear weeping at the recital.

505

The

#### TRAVELS IN

The meaning of the chorus was,

All men must furely die, Tho' no one knows how foon, Yet when the time shall come, The event may be joyful.

These doleful moral fongs or elegies, have a quick and fensible effect on their passions, and difcover a lively affection and fensibility: their countenance now dejected, again, by an easy transition, becomes gently elevated, as if in folemn address or fupplication, accompanied with a tremulous, fweet, lamentable voice: a stranger is for a moment lost to himfelf as it were, or his mind, associated with the perfon immediately affected, is in danger of revealing his own distress-unawares.

They have a variety of games for exercife and paftime : fome particular to the men, fome to the female fex, and others wherein both fexes are engaged.

The ball play is effeemed the most noble and manly exercife. This game is exhibited in an extensive level plain, usually contiguous to the town: the inhabitants of one town play against another, in confequence of a challenge, when the youth of both fexes are often engaged, and fometimes stake their whole substance. Here thev perform amazing feats of ftrength and agility. The game principally confifts in taking and carrying off the ball from the oppofite party, after being hurled into the air, midway between two high pillars, which are the goals, and the party who bears off the ball to their pillar wins the game; each perfon has a racket or hurl, which is an implement of a very curious conftruction, fomewhat

fomewhat refembling a ladle or little hoop-net, with a handle near three feet in length, the hoop and handle of wood, and the netting of thongs of raw hide, or tendons of an animal.

The foot-ball is likewife a favourite, manly diversion with them. Feasting and dancing in the fquare at evening, ends all their games.

They have befides, feafts or feftivals almost for every month in the year, which are chiefly dedicated to hunting and agriculture.

The bufk, or feast of first fruits, is their principal festival; this feems to end the last, and begin the new year.

It commences in August, when their new crops of corn are arrived to perfect maturity: and every town celebrates the busk separately, when their own harvest is ready.

If they have any religious rite or ceremony, this feftival is its most folemn celebration.

When a town celebrates the bufk, having previoufly provided themfelves with new cloaths, new pots, pans, and other houshold utenfils and furniture, they collect all their worn out clothes and other defpicable things, fweep and cleanle their houses, squares, and the whole town, of their filth, which with all the remaining grain and other old provisions, they cast together into one common heap, and confume it with fire. After having taken medicine, and fasted for three days, all the fire in the town is extinguished. During this fast they abstain from the gratification of every appetite and paffion whatever. A general amnefty is proclaimed, all malefactors may return to their town, and they are abfolved from their crimes, which

#### TRAVELS IN

which are now forgotten, and they reftored to favour.

On the fourth morning, the high prieft, by rubbing dry wood together, produces new fire in the public fquare, from whence every habitation in the town is fupplied with the new and pure flame.

Then the women go forth to the harvest field, and bring from thence new corn and fruits, which being prepared in the best manner, in various difhes, and drink withal, is brought with folemnity to the fquare, where the people are affembled, apparelled in their new cloaths and decorations. The men having regaled themfelves, the remainder is carried off and distributed amongst the families of the town. The women and children folace themfelves in their feparate families, and in the evening repair to the public fquare, where they dance, fing, and rejoice during the whole night, obferving a proper and exemplary decorum: this continues three days, and the four following days they receive vifits, and rejoice with their friends from neighbouring towns, who have purified and prepared themfelves.

## CHAP. IV.

## Concerning Property, Agriculture, Arts, and Manufactures.

IT has been faid by hiftorians, who have written concerning the cuftoms and ufages of the aborigines of America, that they have every thing in common, and no private property; which are terms in my opinion too vague and general, when applied to these people. From my own frequent opportunities of observation, and the information of respectable characters, who have spent many years amongst them, I venture to set this matter in a just view before my readers.

I shall'begin with the produce of their agricultural labours.

An Indian town is generally fo fituated, as to be convenient for procuring game, fecure from fudden invation, having a large district of excellent arable land adjoining, or in its vicinity, if poffible on an ifthmus betwixt two waters, or where the doubling of a river forms a peninfula. Such a fituation generally comprises a fufficient body of excellent land for planting Corn, Potatoes, Beans, Squash, Pumpkins, Citruls, Melons, &c. and is taken in with a fmall expence and trouble of fencing, to fecure the crops from the invalion of predatory animals. At other times however they choose fuch a convenient fertile fpot at fome diftance from their town, when circumftances will not admit of having both together.

This is their common plantation, and the whole town plant in one vaft field together; but yet the part or fhare of every individual family or habitation, is feparated from the next adjoining, by a narrow ftrip, or verge of grafs, or any other natural or artificial boundary.

In the fpring, the ground being already prepared, on one and the fame day, early in the morning, the whole town is fummoned, by the found of a conch shell, from the mouth of the overfeer, to meet at the public fquare, whither the people repair with their hoes and axes; and from thence proceed to their plantation, where they begin to plant, not every one in his own little diffrict, affigned and laid out, but the whole community united begins on one certain part of the field, where they plant on until finished; and when their rifing crops are ready for dreffing and cleanfing, they proceed after the fame order, and fo on day after day, until the crop is laid by for ripening. After the feaft of the bufk is over, and all the grain is ripe, the whole town again affemble, and every man carries off the fruits of his labour, from the part first allotted to him, which he deposits in his own granary; which is individually his own. But previous to their carrying off their crops from the field, there is a large crib or granary, erected in the plantation, which is called the king's crib; and to this each family carries and deposits a certain quantity, according to his ability or inclination, or none at all if he fo choofes: this in appearance feems a tribute or revenue to the mico; but in fact is defigned for another purpofe, i. e. that of a public treasury, supplied by a few and voluntary contributions, and to which every citizen has the right of free and equal accefs, when his

his own private flores are confumed; to ferve as a furplus to fly to for fuccour; to affift neighbouring towns, whofe crops may have failed; accommodate flrangers, or travellers; afford provifions or fupplies, when they go forth on hoftile expeditions; and for all other exigencies of the flate: and this treafure is at the difpofal of the king or mico; which is furely a royal attribute, to have an exclusive right an ability in a community to diftribute comfort and bleffings to the neceffitous.

As to mechanic arts or manufactures, at prefent they have fcarcely any thing worth obfervation, fince they are fupplied with neceffaries, conveniencies, and even fuperfluities by the white traders. The men perform nothing except erecting their mean habitations, forming their canoes, ftone pipes, tambour, eagles tail or ftandard, and fome other triffing matters; for war and hunting are their principal employments. The women are more vigilant, and turn their attention to various manual employments; they make all their pottery or earthen-ware, moccafins, fpin and weave the curious belts and diadems for men, fabricate lace, fringe, embroider and decorate their apparel, &c. &c.

CHAP.

#### TRAVELS IN

512

## CHAP, V.

## Of their Marriage and Funeral Ceremonies.

AS to their marriage ceremonies, they are very fimple, yet differ greatly in the various nations and Amongst fome of the bands in the Mufcotribes. gulge confederacy, I was informed the myftery is performed after the following manner. When a young man has fixed his affections, and is determined to marry, he takes a Cane or Reed, fuch as they flick down at the hills of their Bean vines for their fupport: with this (after having obtained her parents' or nearest relations' confent) he repairs to the habitation of his beloved, attended by his friends and affociates, and in the prefence of the wedding guests, he flicks his Reed down, upright in the ground; when foon after his fweet-heart comes forth with another Reed, which fhe flicks down by the fide of his, when they are married : then they exchange Reeds, which are laid by as evidences or certificates of the marriage, which is celebrated with feaffing, mufic and dancing : each one of their relations and friends, at the wedding, contribute fomething towards establishing the new family. As foon as the wedding is over, the town is convened, and the council orders or recommends a new habitation to be constructed for the accommodation of the new family; every man in the town joins in the work, which is begun and finished in a day's time.

The greatest accomplishments to recommend a young man to his favourite maid, are to prove himself a brave warrior, and a cunning, industrious hunter.

#### NORTH AMERICA.

They marry only for a year's time, and, according to ancient cuftom, at the expiration of the year they renew the marriage : but there is feldom an instance of their feparating after they have children. If it should fo happen, the mother takes the children, under her own protection, though the father is obliged to contribute towards their maintenance during their minority and the mother's widowhood.

The Muscogulges allow of polygamy in the utmost latitude; every man takes as many wives as he choofes, but the first is queen, and the others her handmaids and affociates.

It is common for a great man amongst them, who has already half a dozen wives, if he fees a child of eight or nine years of age, who pleafes him, and he can agree with her parents or guardians, to marry her and take her into his house at that age.

Adultery is always punished with cropping, which is the only corporal punifhment amongit them; and death or out-lawry for murder; and infamy for lefs crimes, as fornication, theft, &c. which produces fuch repeated marks and reflections of ridicule and contempt, that it generally ends in voluntary banishment; and these renegadoes and vagabonds are generally the ruffians who commit depredations and murders on the frontiers.

The Muscogulges bury their deceased in the earth. They dig a four-fquare deep pit under the cabin or couch which the deceased lay on, in his houfe, lining the grave with Cyprefs bark, where they place the corpfe in a fitting polture, as if it were alive; depositing with him his gun, tomahawk, L 1

hawk, pipe, and fuch other matters as he had the greatest value for in his life time. His eldest wife, or the queen dowager, has the fecond choice of his possession of the remaining effects are divided amongst his other wives and children.

The Chactaws pay their last duties and refnect to the deceased in a very different manner. As foon as a perfon is dead, they erect a fcaffold eighteen or twenty feet high, in a grove adjacent to the town, where they lay the corpfe, lightly covered with a mantle : here it is fuffered to remain, vi-. fited and protected by the friends and relations, until the flesh becomes putrid, so as eafily to part from the bones; then undertakers, who make it their bufinefs, carefully strip the flesh from the bones, wash and cleanse them, and when dry and purified by the air, having provided a curioufly wrought cheft or coffin, fabricated of bones and fplints, they place all the bones therein; it is then deposited in the bone-house, a building erected for that purpose in every town. And when this house is full, a general folemn funeral takes place; the nearest kindred or friends of the deceased, on a day appointed, repair to the bone-houfe, take up the refpective coffins, and following one another in order of feniority, the nearest relations and connexions attending their respective corpfe, and the multitude following after them, all as one family, with united voice of alternate Allelujah and lamentation, flowly proceed to the place of general interment, where they place the coffins in order, forming a pyramid\*; and laftly, cover all over with earth, which raifes

\* Some ingenious men, whom I have converfed with, have given it as their opinion, that all those pyramidal artificial hills, usually called Indian mounts, were raifed on these occasions, and are generally sepulchres. However I am of a different opinion.

a conical

## NORTH AMERICA.

a conical hill or mount. Then they return to town in order of folemn procession, concluding the day with a festival, which is called the feast of the dead.

The Chactaws are called by the traders flats, or flat-heads, all the males having the fore and hind part of their skulls artificially flattened, or compreffed ; which is effected after the following manner. As foon as the child is born, the nurfe provides a cradle or wooden cafe, hollowed and fafhioned, to receive the infant, lying proftrate on its back, that part of the cafe where the head repofes, being fashioned like a brick mould. In this portable machine the little boy is fixed, a bag of fand being laid on his forehead, which by continual gentle compression, gives the head fornewhat the form of a brick from the temples upwards; and by thefe means they have high and lofty foreheads, floping off backwards. These men are not fo neat in the trim of their heads, as the Muscogulges are, and they are remarkably flovenly and negligent in every part of their drefs; but otherwife they are faid to be ingenious, fenfible and virtuous men; bold and intrepid, yet quiet and peaceable, and are acknowledged by the Creeks to be brave.

They are fuppoled to be most ingenious and industrious husbandmen, having large plantations, or country farms, where they employ much of their time in agricultural improvements, after the manner of the white people; by which means their territories are more generally cultivated, and better inhabited, than any other Indian republic that we know of. The number of their inhabitants is faid greatly to exceed the whole Muscogulge confederacy, although their territories are not a fourth part L l 2 as as extensive. It appeared to me from observation, and what information I could get, that the Indians entertained rational notions of the foul's immortality, and of a future state of focial existence; and accordingly, in order to inculcate morality, and promote human happines, they applaud praiseworthy actions, as commendable and necessary for the fupport of civil fociety, and maintaining the dignity and strength of their nation or tribe, as fecuring an excellent and tranquil state and degree in the world of spirits, after their decease. And they fay the Great Spirit favours all good and brave men.

## CHAP. VI.

### Language and Manners.

THE Mufcogulge language is fpoken throughout the confederacy, (although confifting of many nations, who have a fpeech peculiar to themfelves) as alfo by their friends and allies, the Natches. The Chicafaw and Chactaw, the Mufcogulges fay are dialects of theirs.

This language is very agreeable to the ear, courteous, gentle and mufical: the letter R is not founded in one word of their language: the women in particular fpeak fo fine and mufical, as to reprefent the finging of birds; and when heard and not feen, one might imagine it to be the prattling of young children. The men's fpeech is indeed more ftrong and fonorous, but not harfh, and in no inftance gu tural, and I believe the letter R is not ufed to e prefs any word, in any language of the confederacy.

The Cherokee tongue, on the contrary, is very loud, fomewhat rough, and very fonorous, founding the letter R frequently, yet very agreeable and pleafant to the ear. All the Indian languages are truly rhetorical, or figurative, affifting their fpeech by tropes; their hands, flexure of the head, the brow, in fhort, every member, naturally affociate, and give their affiftance to render their harangues eloquent, perfuafive and effectual.

The pyramidal hills or artificial mounts, and high-ways, or avenues, leading from them to artifical lakes or ponds, vaft tetragon terraces, chunk chunk yards \*, and obelifks or pillars of wood, are the only monuments of labour, ingenuity and magnificence, that I have feen worthy of notice, or remark. The region lying between Savanna river and Oakmulge, East and West, and from the seacoaft to the Cherokee or Apalachean mountains, North and South, is the most remarkable for these high conical hills, tetragon terraces and chunk vards. This region was poffeffed by the Cherokees, fince the arrival of the Europeans, but they were afterwards dispossefield by the Muscogulges, and all that country was probably, many ages preceding the Cherokee invafion, inhabited by one nation or confederacy, who were ruled by the fame fyftem of laws, cultoms and language, but to ancient, that the Cherokees, Creeks, or the nation they con-quered, could render no account for what purpofe these monuments were railed. The mounts and cubical yards adjoining them, feem to have been raifed in part for ornament and recreation, and likewife to ferve fome other public purpole, fince they are always to fituated as to command the most extenfive profpect over the town and country adja-The tetragon terraces feem to be the founcent. dation of a fortrefs; and perhaps the great pyramidal mounts, ferved the purpole of look out towers, and high places for facrifice. The funken area, called by white traders the chunk yard, very likely ferved the fame conveniency that it has been appropriated to it by the more modern and even prefent nations of Indians, that is, the place where they burnt and otherwife tortured the unhappy captives

\* Chunk yard, a term given by the white traders, to the oblong four fquare yards, adjoining the high mounts and rotundas of the modern Indians.---In the centre of these thands the obelist, and at each corner of the farther end stands a flave post or strong flake, where the captives that are burnt alive are bound.

when i with

that

that were condemned to die; as the area is furrounded by a bank, and fometimes two of them, one behind and above the other, as feats, to accommodate the spectators at such tragical scenes, as well as the exhibition of games, shows, and dances. From the river St. Juans, foutherly to the point of the peninfula of Florida, are to be seen high pyramidal mounts, with spacious and extensive avenues, leading from them out of the town, to an artificial lake or pond of water; these are evidently designed in part for ornament or monuments of magnificence, to perpetuate the power and grandeur of the nation, and not inconfiderable neither, for they exhibit scenes of power and grandeur, and must have been public edifices.

The great mounts, highways, and artificial lakes up S. Juans, on the Eaft fhore, juft at the entrance of the great Lake George, one on the oppofite fhore, on the bank of the Little Lake, another on Dunn's Ifland, a little below Charlotteville, one on the large beautiful ifland juft without the Capes of Cape George, in the fight of Mount Royal, and a spacious one on the West banks of the Musquitoe river near New Smyrna, are the most remarkable of this fort that occurred to me; but undoubtedly many more are yet to be difcovered farther South in the peninfula; however I obferved none Westward, after I left St. Juans on my journey to little St. Juan, near the bay of Apalache.

But in all the region of the Mufcogulge country, South-Weft from the Oakmulge River quite to the Tallapoofe, down to the city of Mobile, and thence along the fea coft, to the Mifliffippi, I faw no figns of mountains or highways, except at Taenfa, where were feveral inconfiderable conical mountains; and but but one inftance of the tetragon terraces, which was at the Apalachucla old town, on the Weft banks of that river: here were yet remaining confpicuous monuments, as vaft four fquare terraces, chunk yards, &c. almost equalling those eminent ones at the Oakmulge fields; but no high conical mounts. Those Indians have a tradition that these remains are the ruins of an ancient Indian town and fortrefs. I was not in the interior parts of the Chactaw territories, and therefore am ignorant whether there are any mounts or monuments there.

To conclude this fubject concerning the monuments of the Americans, I deem it neceffary to obferve as my opinion, that none of them that I have feen difcover the leaft figns of the arts, fciences, or architecture of the Europeans or other inhabitants of the old world; yet evidently betray every fign or mark of the most diftant antiquity.
